KABWE DISTRICT

INTEGRATED DEVELOPMENT PLAN 2023-2028

VISION

'A Sustainable Vibrant, Inclusive, Well Connected and Smart City by 2050'

Republic of Zambia

ZERO DRAFT

**KABWE DISTRICT INTEGRATED DEVELOPMENT PLAN 2023 -
2028**

The development of this Integrated Development Plan (IDP) for Kabwe District was made possible by the support from the American people through the United States Agency for International Development (USAID) Local Impact Governance Project. The contents of this document do not necessarily reflect the views of USAID or the United States Government.

RIDGEWAY LUSAKA.

FOREWORD

Benjamin Franklin once said; “Those that fail to plan, plan to fail”. The increment in source allocation in Constituency Development Funds and population requires districts to put in plans that drives the social-economic development of their districts. Kabwe, like any other district had from March, 2022 involved itself in developing a 2022 – 2026 Integrated Development Plan. Therefore, the Kabwe District Integrated Development Plan attempts to align itself with appropriate developmental interventions towards industrialization, infrastructure growth, human settlement and urban revitalization to achieve a City status.

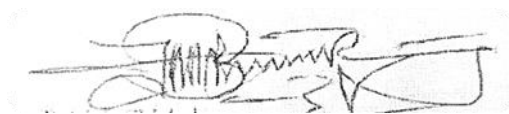

Integrated Development Planning is an approach to planning which is aimed at involving the local community to find suitable interventions towards sustainable development. It is the alignment of community’s needs with the district budget. The ultimate goal is to improve the quality of life for all the inhabitants of our district. We take into account the existing conditions, problems and resources available for development in order to set a framework for how land should be used. Priority will be given to what infrastructure and services are needed and how the environment should be protected.

At Kabwe, we aim to apply our resources and people in such a manner that we address all issues pertaining to economic development, social upliftment, expansion, and maintaining of infrastructure, as well as ecological sustainability. We also believe that the District Administration, Local Authority, Citizens and Businesses Community form a strong partnership with the common goal of developing a preferred City to live in. In doing so, we can Serve, Grow and Succeed Together.

I am happy that the formulation of the Kabwe Integrated Development Plan has gone well and has engendered collaboration across participating institutions. It is therefore imperative that coordination, communication and building synergies amongst all stakeholders is enhanced. I wish to express gratitude to His Worship the Mayor of Kabwe, the Honourable Members of Parliament for Kabwe Central, Hon. Chrizoster H. Phiri and Hon. Sydney Mushanga for Bwacha Constituencies. Further gratitude goes to the District Commissioner, Mr Lennox Shimwambwa, for his stewardship throughout the process of coming up with this document. I wish to take this opportunity to express my gratitude to USAID Local Impact Governance Project for the unwavering support during the IDP preparation process which rendered a wide citizen participation and collection of spatial data in accordance with the requirements of the Urban and Regional Planning Act No. 3 of 2015.

I further wish to extend my gratitude to the members of the District Development Coordinating Committee (DDCC), the Provincial Physical Planning Authority for the technical support and guidance provided during the formulation process of the IDP and every stakeholder that participated in the development of this plan. The invaluable wealth of experience and commitment by the members in their respective portfolios is greatly valued and made it possible to identify the appropriate indicators including the establishment of baselines and targets that have been used in the IDP.

Finally, I would like to appreciate the Technical Working Group for the extra work invested in preparing and working tirelessly to consolidate the various inputs into the IDP.

A handwritten signature in black ink, appearing to read 'Patrick Chishala', is written over a faint, light-colored rectangular stamp or watermark.

Patrick Chishala

His Worship the Mayor of Kabwe

ACKNOWLEDGEMENTS

I am happy that the formulation of the Kabwe Integrated Development Plan has gone well and has engendered collaboration across participating institutions. It is therefore imperative that coordination, communication and building synergies amongst all stakeholders is enhanced. I wish to express gratitude to His Worship the Mayor of Kabwe, the Honourable Members of Parliament for Kabwe Central, Hon. Chrizoster H. Phiri and Hon. Sydney Mushanga for Bwacha Constituencies. I wish to take this opportunity to express my gratitude to USAID Local Impact Governance Project for the unwavering support during the IDP preparation process which rendered a wide citizen participation and collection of spatial data in accordance with the requirements of the Urban and Regional Planning Act No. 3 of 2015.

I further wish to extend my gratitude to the members of the District Development Coordinating Committee (DDCC), the Provincial Physical Planning Authority for the technical support and guidance provided during the formulation process of the IDP and every stakeholder that participated in the development of this plan. The invaluable wealth of experience and commitment by the members in their respective portfolios is greatly valued and made it possible to identify the appropriate indicators including the establishment of baselines and targets that have been used in the IDP.

Finally, I would like to appreciate the Technical Working Group for the extra work invested in preparing and working tirelessly to consolidate the various inputs into the IDP.

Lennox Shimwambwa
District Commissioner
KABWE

EXECUTIVE SUMMARY

The formulation process of the Kabwe Integrated Development Plan (KIDP) was done through a participatory approach emanating from public consultations, zones, wards, District Development Coordinating Committee, development partners and the general citizenry of the District. The process involved intensive consultations, document reviews and district situation analysis in order to reflect the local reality and to create a sense of ownership of the plan by the citizens of Kabwe. The KIDP is well aligned to the country's aspiration of "*socio economic transformation for improved livelihood*" as espoused in the Eighth National Development Plan and the National Vision 2030 of becoming a "*prosperous middle income nation by 2030*".

The KIDP is anchored on the four strategic development areas of the 8NDP aimed at improving the living conditions of the citizens of Kabwe namely; Economic Transformation and Job Creation, Human and Social Development, Environmental Sustainability, and Good Governance Environment. The KIDP is critical in guiding the development of the District as it seeks to address the challenges that the district is facing that were highlighted during the participation process. The KIDP has further outlined key potential areas of investment that will create forward and backward linkages and revamp the local economy. The plan is cognizant of the impact of climate change on the district and therefore endeavors to promote climate change and adaptation strategies such as sustainable agro forestry and Smart agricultural practices. The KIDP embraces the concept of inclusive development in addressing the needs of the vulnerable in the district such as youths, women and persons with disabilities. *The KIDP envisions the District as a sustainable, vibrant, inclusive, well connected and smart city by 2050*, that will enhance quality service delivery and create an enabling environment for economic growth and development using Information, Communication and Technology (ICT).

The task ahead is therefore huge and the fruition of this plan requires commitment and collaborative efforts by all stakeholders in ensuring its successful implementation.

JOVAX NGOMA
TOWN CLERK

PART ONE

INTRODUCTION AND BACKGROUND

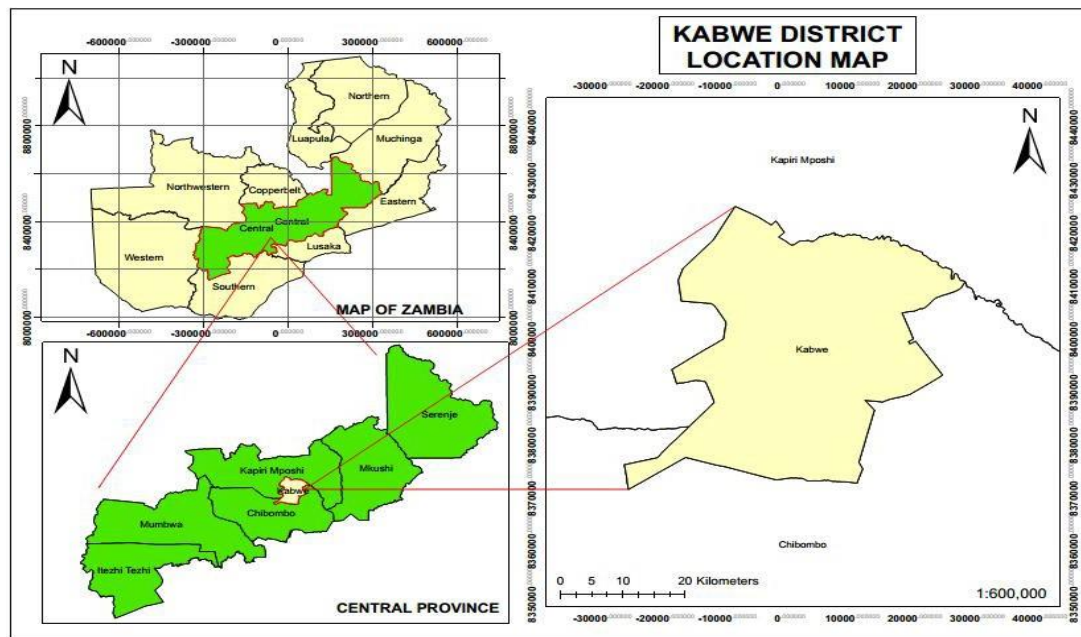

1.0 Introduction and Background

The Urban and Regional Planning (URP) Act No.3 of 2015 mandates Local Authorities to prepare an Integrated Development Plan (IDP) as a principal planning instrument to guide and inform all planning decisions and development by all levels of government and stakeholders in the district. It is in the foregoing that the Kabwe Municipal Council during its sitting under Minute number CM/16/01/22 initiated the planning process for the preparation of the Kabwe Integrated Development Plan (KIDP). Pursuant to Section 19(4) of the URP Act No.3 of 2015, the KIDP links, integrates and coordinates sector plans and proposals for the development of the district and forms the policy framework and basis on which annual budgets shall be approved. The KIDP further promotes sustainable environmental and resource management and also identifies priority areas for development. The rationale of the KIDP is to enhance co-ordination among all stakeholders in the District by ensuring that their plans, operations are aligned with and inform each other. Therefore, the KIDP was done through a multi sectoral approach to address the development needs of the District in a coherent manner. The KIDP is aligned to National Development Plan currently the Eighth National Development Plan (8NDP) which hinges on the following Strategic Development Areas; Economic Transformation and Job Creation, Human and Social Development, Environmental Sustainability and Good Governance Environment.

1.1 Description of the IDP area

Kabwe is the Provincial capital of Central Province situated along the Great North Road 139Km from the North of Lusaka and about 55Km South of Kapiri Mposhi. It is located in vicinity of latitude 14 27' South and longitude 28 27' east. The district has an area of approximately 1 572 square kilometers which translates into 159,268 Hectares. Kabwe has been an important mining town for many decades, it was early connected to the country's principal railway line that goes up to Dares salaam in Tanzania. The figure below shows the location of the district in relation to other districts.

Figure 1: Location Map of Kabwe District

KMC, 2022

1.1.1 Historical Perspective of the Kabwe IDP area

The name Kabwe is short for “Kabwe Ka Mukuba” meaning the stone of ore or the place of smelting. The old motto for the town was “from the earth we derived our being” which symbolized the significance of the stone ore to the local people. The district has a significant historical background to mining that can be traced to a mining engineer T.G. Davey in 1902 who on the lookout for signs of Copper stumbled on a curiously shaped hill known to the local people as Mutwe wa Nsofu or Elephant head. Exploring the head more closely, he discovered rich outcrops of lead and zinc. The formation of the deposits was similar to that in Broken Hill mines of Australia he therefore, named the place Broken Hill. Kabwe was known as Broken Hill until 1967 when the pristine name of Kabwe was restored.

The Rhodesian Broken Hill Development Company began exploiting this ore by open cast mining. High-grade lead and zinc and later vanadium and silver were also excavated.

In the early days, problems started as deposits containing lead and zinc could not at first be economically separated and the mine closed down. The mine reopened and the farming industry began to grow to serve the town. The railway made Kabwe its headquarters. Locomotive sheds and marshalling yards were established, and government organised its administrative headquarters for central province here. The

Central African Road Services (CARS), then the largest passengers and Haulage Company in the country, set up a depot and made Kabwe its Headquarter and Kabwe became the gateway to East Africa. Kabwe was declared a village in 1915, a township in 1930 and a municipality in 1954. The first mayor was Mr A.G Easton. In 1921 a skull of primeval man, dating back to 50,000 years Before Christ (BC) was unearthed. The skull is however kept in the British Museum at present. Efforts to bring this piece of historical importance back to Zambia have proved futile. Kabwe is also regarded as the cradle of Zambia's independence as crucial decisions leading to independence in 1964 were made here.

1.2 General Physical Characteristics

1.2.1 Topography

Kabwe is situated on the so- called central plateau system at altitudes of 1,207m above sea level. The topography has a dominant gradient from southwest to northeast at an average slope of approximately 4m/km. The most dominant topographic features are dambos, which are found in different sizes and frequencies.

1.2.2 Geology

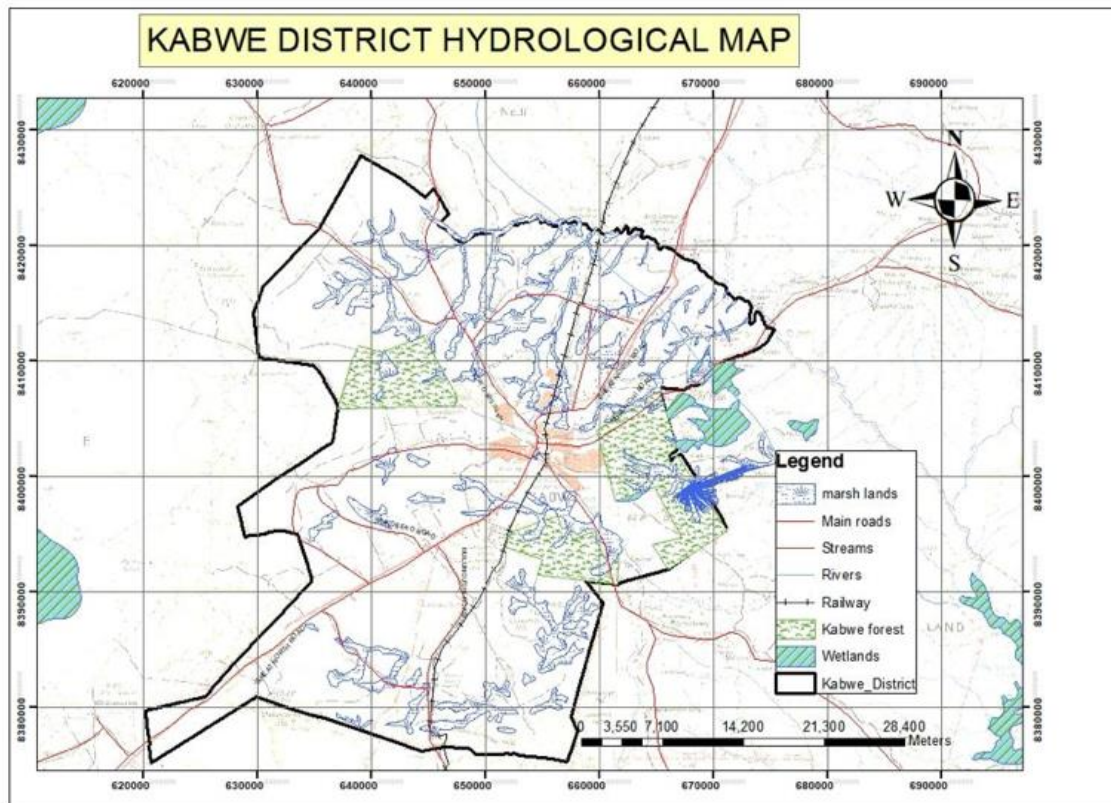

The geological underground of Kabwe and its surroundings consist of schists, siltstones and quartzitic sand stones of the Katanga Super Group. The Hard rocks rarely crop out because they are weathered and covered by unconsolidated sediments.

The geological underground of the western part of Kabwe is different from the remaining parts. Though the rocks also belong to the Katanga Formation, they consist of limestone, marble and dolomite. The Kalulu Well Field produces Ground water from limestone. These calcareous rocks contain caverns and channels that result from the chemical solution. It is assumed that caverns and channels are connected to some dambos and may reach the Lukanga swamps that are located some 50km towards the west.

1.2.3 Hydrology

Kabwe's major river is the Mulungushi River and it marks the boundary with Kapiri Mposhi District to the North. Other rivers are Chitakata, Kalonga and Munga.

Figure 2: Kabwe District Hydrology Map

Source: KMC, 2022

1.2.4 Drainage Pattern

Kabwe is situated east of the main water shed. The smaller western part drains towards the Lukanga Swamps whereas the remaining surface water flows towards the east into the catchment area of the Lukanga River system. Of special interest is the Kalulu Forest Reserve that contains the Kalulu Well Field. The drainage of the surface water directs towards the east like the rest of Kabwe area. However, the flow pattern of the surface water is not identical with the subsurface drainage system.

1.2.5 Climate

1.2.5.1 Temperature

The mean annual temperature of Kabwe is 20.8 C. The hottest month is October with an average temperature of 23.9 C whereas July represents the coldest month with an average temperature of 15.8 C. The temperature description reflects the general temperatures within the district (see the table below).

Table 2: Kabwe District Annual Temperatures

Area	Altitude	Annual Mean	Average Maximum	Average Minimum
1572	(m.a.s.l)	°C	Annual Temp °C	Annual Temp.°C
	1,207	20.8	29.8	14.9
	(m a s l)		Annual Temp °C	

Source: Meteorological Department

1.2.6 Rainfall

The average total annual rainfall in Kabwe is some 900mm (50 years, from 1949/50 to 1999/2000). Most of the rainfall is between October and April, with December and January as the wettest months. Due to the high temperature prevailing in the area, evapo-transpiration is very high and exceeds precipitation. This indicates a very dry area, which hardly allows a prosperous agriculture other than by irrigation.

1.2.7 Relative Humidity

The average annual humidity in Kabwe is about 63.5%. The highest yearly humidity is reached during the rainy season in the months of December to April, ranging between 72% and 81%. In contrast, the lowest humidity, some 41-44%, prevails during the hottest months of the year September and October. In comparison, the relative humidity figures for the central province and Zambia are nearly the same for Kabwe.

1.2.8 Sunshine and Winds

The mean annual sunshine duration is 8.2 hours per day. During the period of less rainfall (April to October) when the days are longer, the sunlight period of between 8.7 and 10.2 h/d is experienced. The shortest sunshine duration is during the months of higher precipitation (December to February) ranging from 5.7 to 5.9 h/d. In comparison, the average daily sunshine hours for Central province and Zambia are similar to Kabwe. Prevailing winds are predominantly towards southwest in Central

Figure 4: Kabwe Drainage Distribution Map

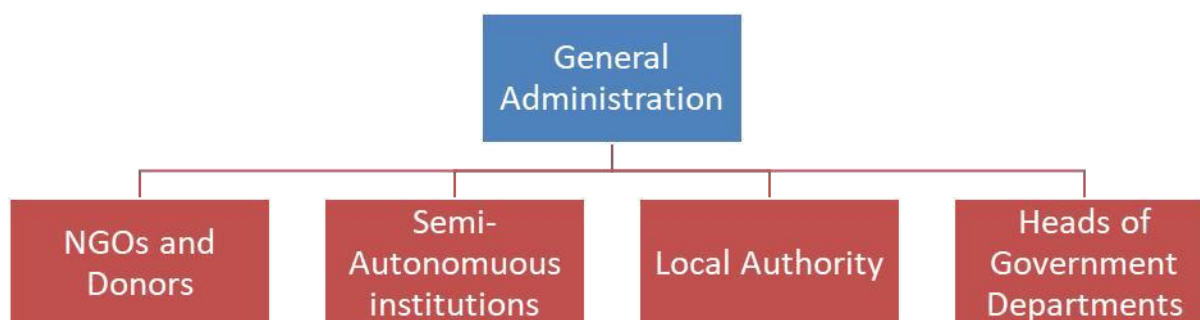

There are two administrative systems

1.3.1 Central Administration

Just like in all districts in

Figure 5:Organizational Structure at District Level

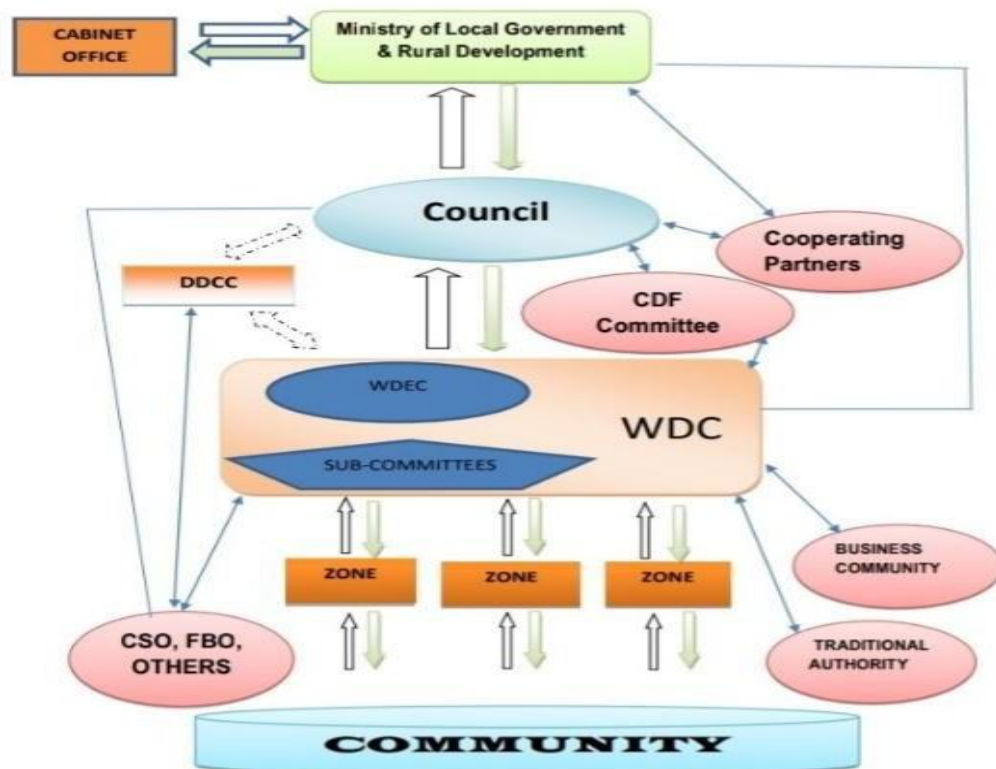

1.3.2 Local Authority

The Local Authority has two wings, the political and the administrative wing. Kabwe was among the pilot districts to devolve functions from Central government to the Local Authority. Line ministries and departments have since been incorporated into the local government structure and these cover health, education, agriculture, fisheries and livestock, community development, social welfare and Tourism Arts and Culture. The administrative wing is headed by the Town Clerk who is supported by 15 chief officers who are the heads of departments. The heads are assisted by a number of officers in their respective sections. On the other hand, the political wing is headed by Her Worship the Mayor who is supported by the chairpersons of the committees of the council and the rest of the councilors.

1.3.3 Governance

The National Decentralization Policy emphasizes the establishment of Sub-district structures called Ward Development Committees (WDCs) which are legal platforms for people's participation in the development process. The district has established 29 WDCs whose mandate is to create a link between communities and the Council, ensure that the residents' wards have an input in decisions made by the Council and stimulate and coordinate initiatives for the improvement of the environment and the livelihood of the residents. Figure 3.11 illustrates the reporting structure from the community level.

Figure 6: Reporting Structures for Ward Development Committees

MoLGRD, 2021

CHAPTER TWO:

PLANNING SURVEY AND ISSUES REPORT

SECTORAL AND THEMATIC ANALYSIS

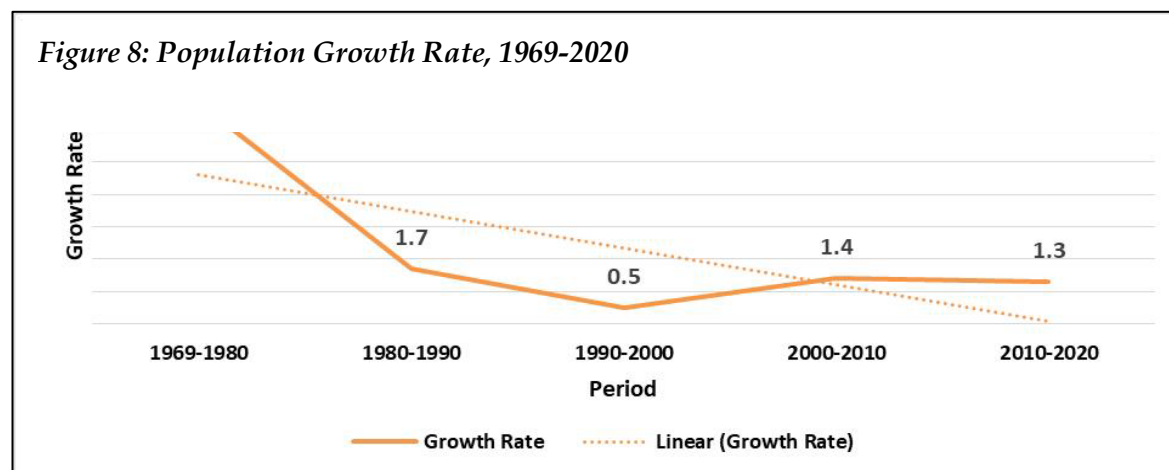

2.0 Demographic Analysis

The following section provides a situational analysis of the demographic dynamics of Kabwe district. The objective of this profile is to assist the Municipality in acquiring credible demographic data to inform planning, budgeting, prioritization and policy making options across various sectors. The dynamics identified include population and population growth trends and population characteristics. It must be noted that the demographic analysis apart from the population of the district, its constituencies and density was based on the past census report. This was mainly because at the time of the preparation of this plan, a detailed census report had not yet been released. Nevertheless, the Urban and Regional Planning Act No.3 of 2015 provides for the review of the plan, therefore, in an event that a detailed Census report is released, the KIDP will be subjected to a review to include the current population projections with regard to the population dynamics in question.

2.1 Population and Population Growth

2.1.1 District Population Growth Trends

The figure below presents changes in the district's population growth rate from 6.8% for the period 1969-1980 to 1.3% for period 2010-2020. It shows a sharp reduction from 6.8% to 0.5% between the period 1969 - 1980 and 1980 - 2000. And then increased by 0.8% between the period 1990 - 2000 (0.5%) and the period 2010 - 2020 (1.3%).

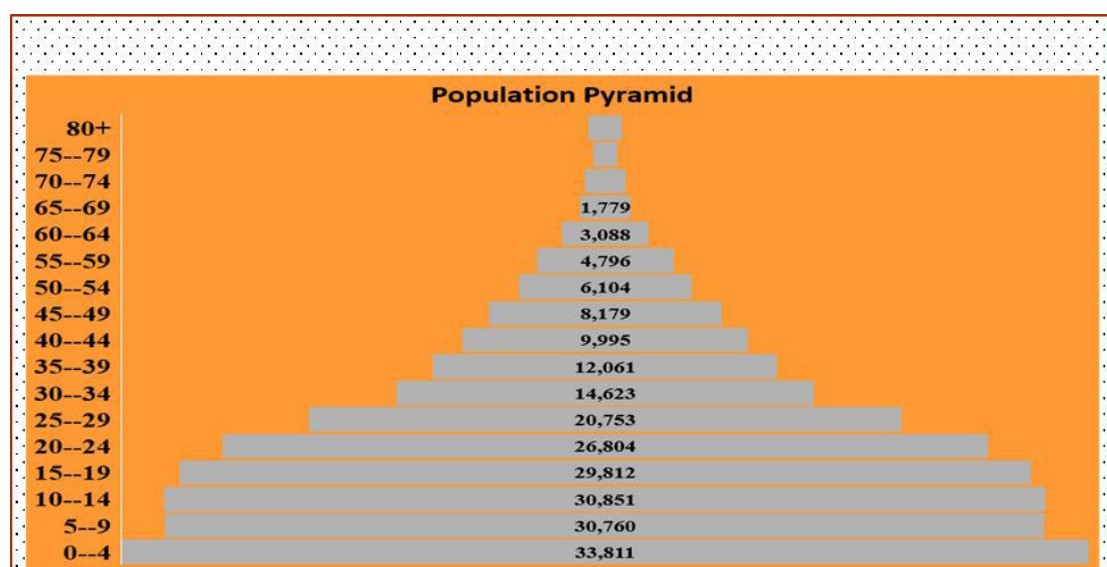

(2013 CSO Report: Population and Demographic Projections, 2011 - 2035)

2.1.2 Age Structure and Dependency Burden

In terms of Age Structure, the district is characterized by an Expansive Pyramid, that is, the district has more people in the age group 0-15 years and begin to reduce afterwards. This implies that, Kabwe district has a serious dependency burden because the youth dependency ratio (the proportion of youths (under age 15) to economically active adults (ages 15 to 64)) is high. The district is therefore concerned for the reason that; the phenomenon of youth dependency may lead to an important concept called the hidden momentum of population growth (a built in tendency of the population to continue to grow even after birth rates have declined significantly).

In view of the aforesaid, the district is expected to experience relatively high fertility rate due social, economic, cultural and institutional norms (belief that children are assets, early marriages, instincts which dictate that marrying is mandatory) which account for the phenomenon of youth dependency. Figure 6 depicts projected population pyramid for Kabwe by 2035.

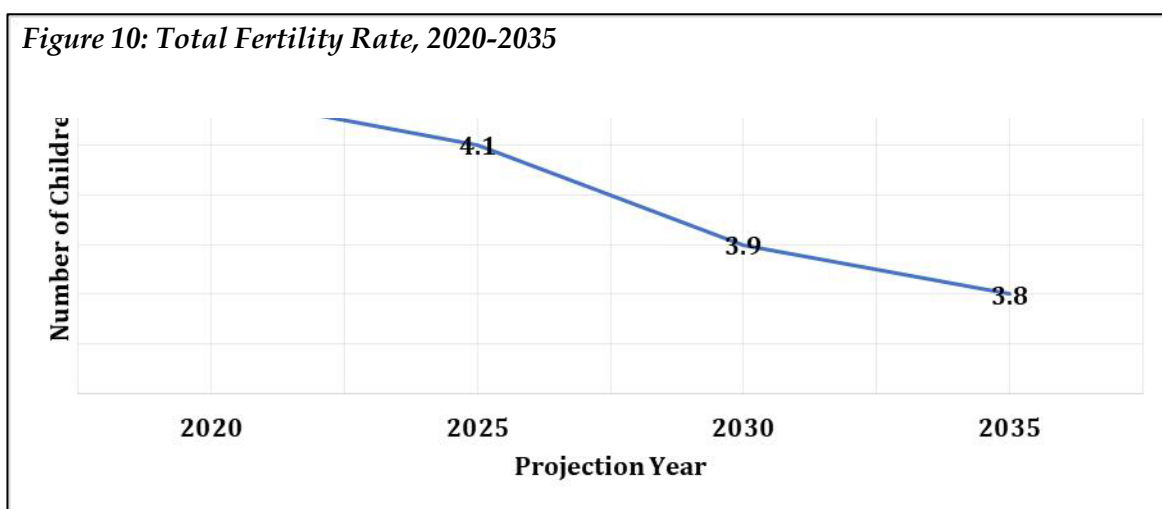

Figure 9: Age structure Expansive Pyramid

(2013 CSO Report: Population and Demographic Projections, 2011 - 2035)

2.1.3 Total Fertility Rate (TFR)

It is observed from Figure 7 that, Total Fertility Rates (TFR) is expected to drop by 0.4%, that is, from 4.2 in 2020 to 3.8 in 2035. If fertility rate were to remain constant at current levels, a woman from Kabwe district would bear an average of 3.8 children in her lifetime. Though showing a declining trend line, the average rate of population growth of 1.3% is not expected to decline in the near future because there is early and almost universal marriage in the rural wards of the district and also the concept of the hidden momentum of population growth due youthful population as discussed in Figure 9.

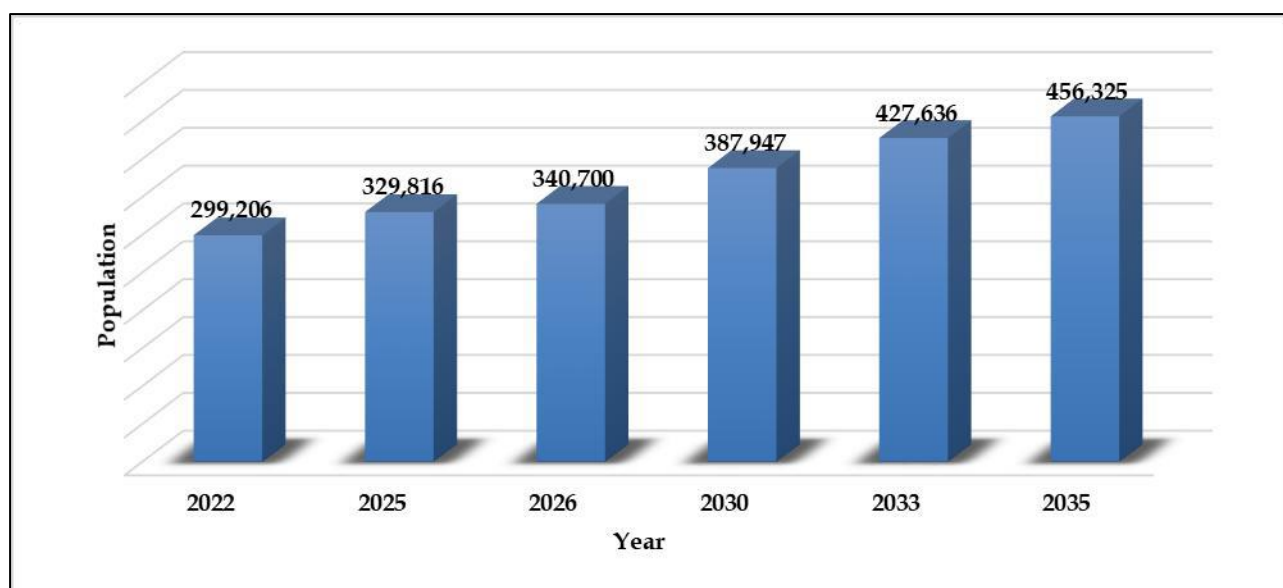

(2013 CSO Report: Population and Demographic Projections, 2011 – 2035)

2.1.4 District Population

According to 2022 Census of Population and Housing Preliminary Report of December 2022, Kabwe District had a total projected population of 299,206 inhabitants in 2022 with an annual geometric growth rate of 3.3%. While the district's population density stood at 190.6Km². On analysis for the span of 13 years, the district's Population is expected to grow from 299,206 in 2022 to 456,325 in 2035.

Figure 11: Projected Population 2022-2035

Source: ZSA, 2022

2.1.4.1 Projected Population and Characteristics

The district's population is expected to increase from 299,206 in 2022 to 456,325 by 2035. From the positive point of view, this population growth provides business opportunities such as shopping malls, agro-value addition, setting up private schools, clinics, etc., due to readily available market.

On another hand, this population growth may compromise the service provision in the district. For example, demand for housing units, land, public health, education, social, and economic, water & sanitation, trading spaces will also increase putting pressure on already limited facilities.

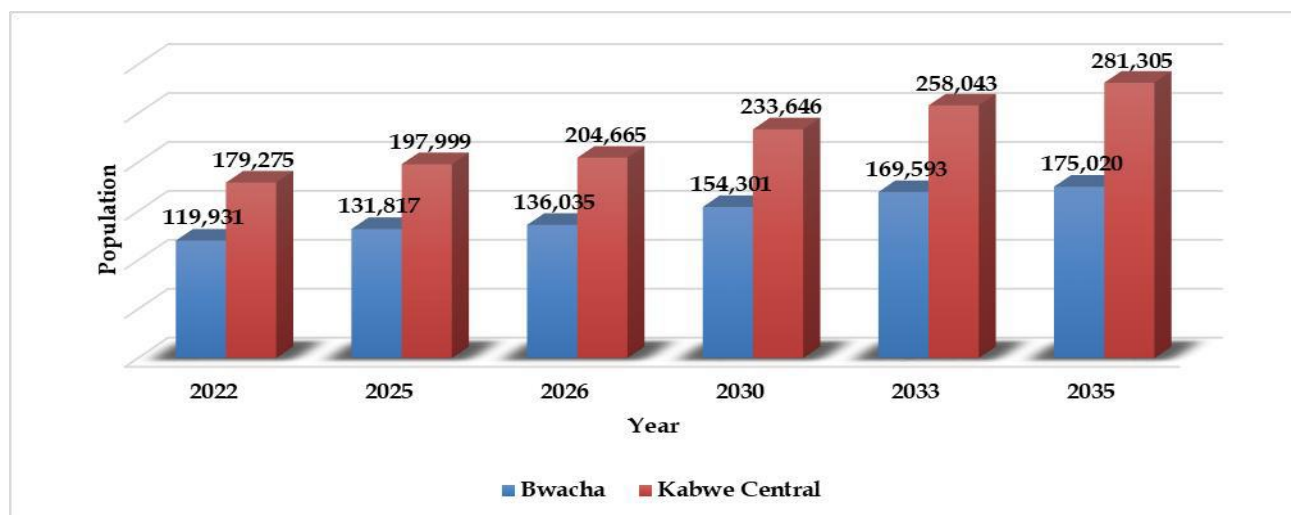

Therefore, the district is trying to analyse the current service coverage across all sector and establish if it's enough to cope with this anticipated population growth, if not increase service coverage by what margins?

2.1.5 Population Projection by Constituency

According to 2022 Census of Population and Housing Preliminary Report of December 2022, Kabwe Central Constituency had a total projected population of

179,275 people in 2022 whereas Bwacha Constituency had 119,931. However, in 2035 Kabwe Central Constituency is expected to have 281,305 inhabitants while Bwacha Constituency 175,020 people.

Figure 12: Population Projection by Constituency 2022-2035

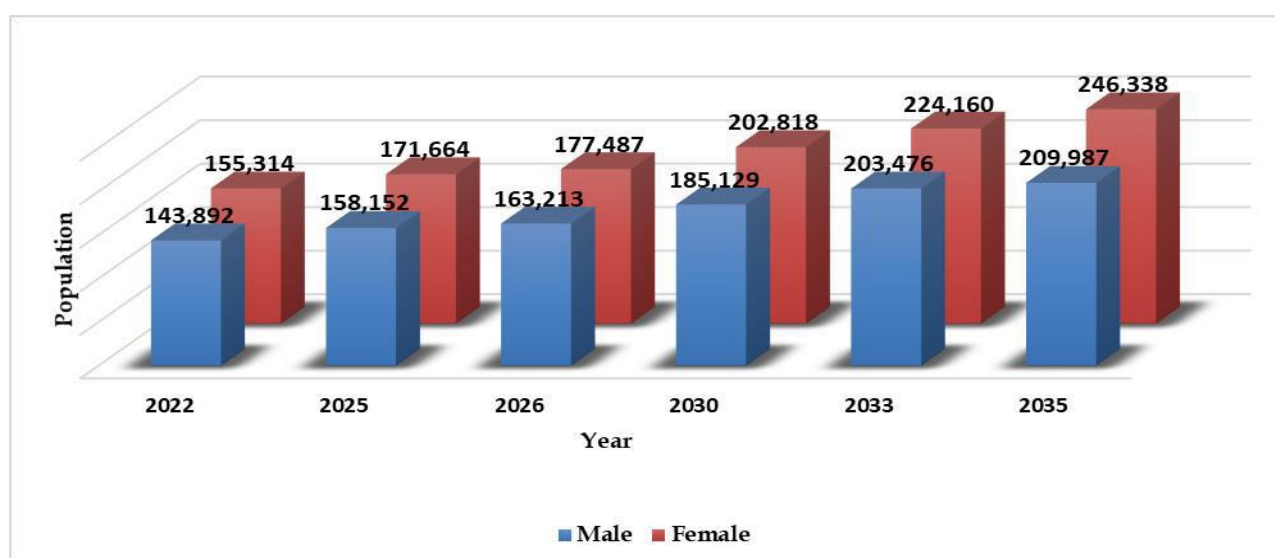

Source; ZSA, 2022

2.1.6 Population Projection by Gender

Figure 11 shows that, Female population (155,314) in 2022 was slightly higher than male population (143,982) and that will continue to be the case until 2035, female population at 246,338 while male population at 209,987 .

Figure 13: Population Projection by Gender

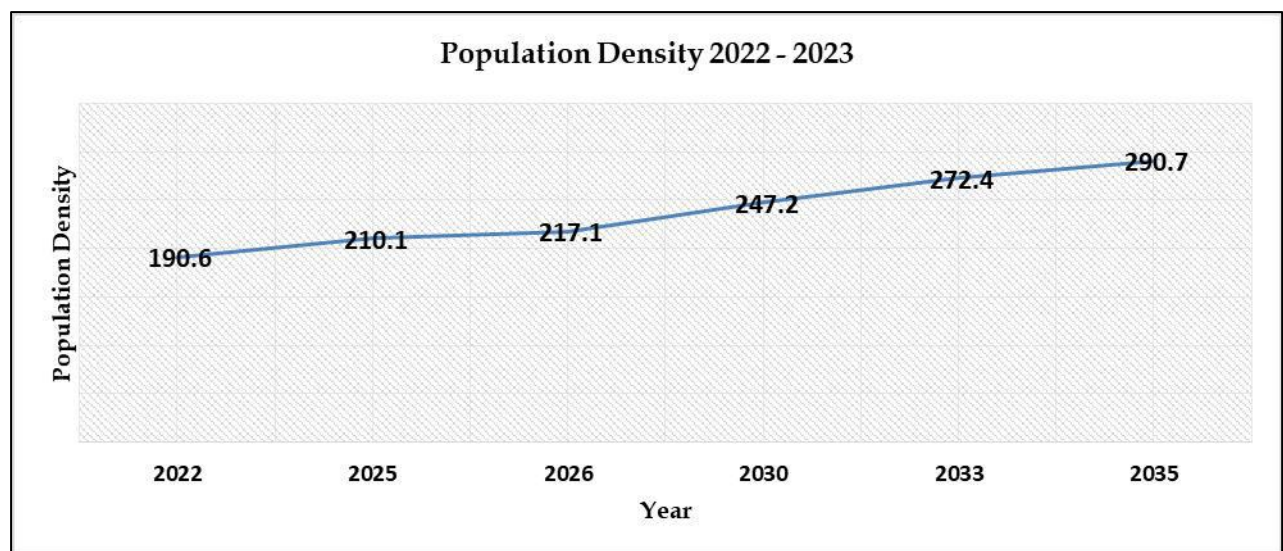

Source; ZSA, 2022

2.1.7 Projected Population Density

It is projected that the district's population density will increase from 190.6Km² in 2022 to 290.7Km² in 2035. This change will present a huge challenge to the district in terms increased demand for land use, increased demand for education, health and other. With overcrowding due to population growth, the district will see an increased breakout of numerous diseases. Apart from that, the utility company such ZESCO and Lukanga Water Supply and Sanitation Company will face a big challenge of expanding their services in terms of laying new pipes, poles and electricity lines as a case maybe. There is need therefore for the district to adequately plan for this anticipated development.

Figure 14: Population Density 2022-20235

Source: ZSA, 2022

2.1.8 District Population by Ward

The population projection by ward was based on the 2010 census report this is because at the time of preparation of the KIDP, the preliminary Census report for 2022 did not show the population distribution of the District by ward. The population projection by ward is presented in table 3.

Table 2: Population Distribution by Ward, 2020-2035

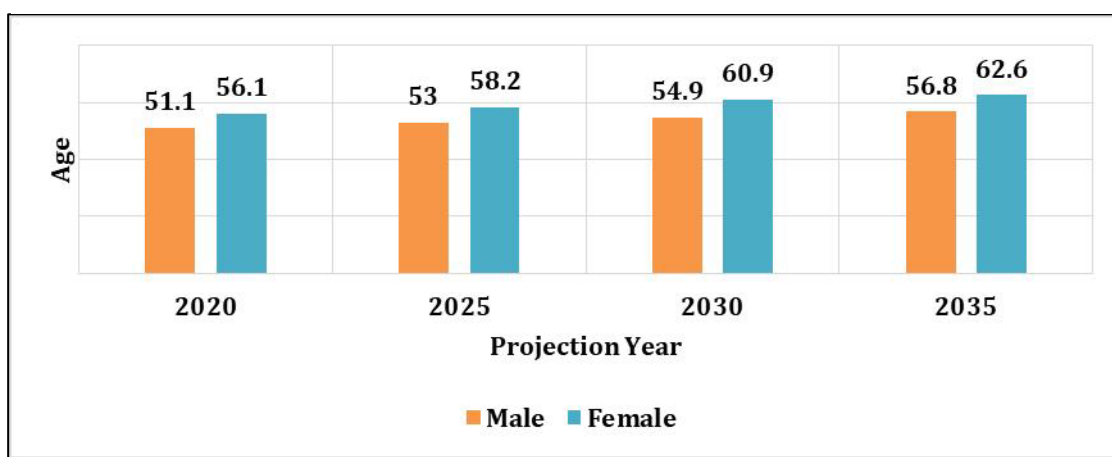

<i>Year</i>		2020	2025	2030	2035
DISTRICT'S	TOTAL				
POPULATION		237,299	253,425	269,759	286,418

(2013 CSO Report: Population and Demographic Projections, 2011 – 2035)

2.1.9 Life Expectancy at Birth: Male – Female

Life expectancy at birth will continue to improve, from 51.1 years for men and 56.1 years for women in 2020 to 56.8 years for men and 62.6 years for women in 2035. Analysis by gender shows that, women will live a little longer than men. Figure 07 below shows the trends on Life Expectancy at Birth. In our planning as a district we trying to establish why is this so? Is it that men don't seek medical attention immediately they fall sick? If this is one of the reasons, what programs should be introduced to compel men seek medical attention immediately they fall sick!

Figure 15: Life Expectancy at Birth, 2020-2035

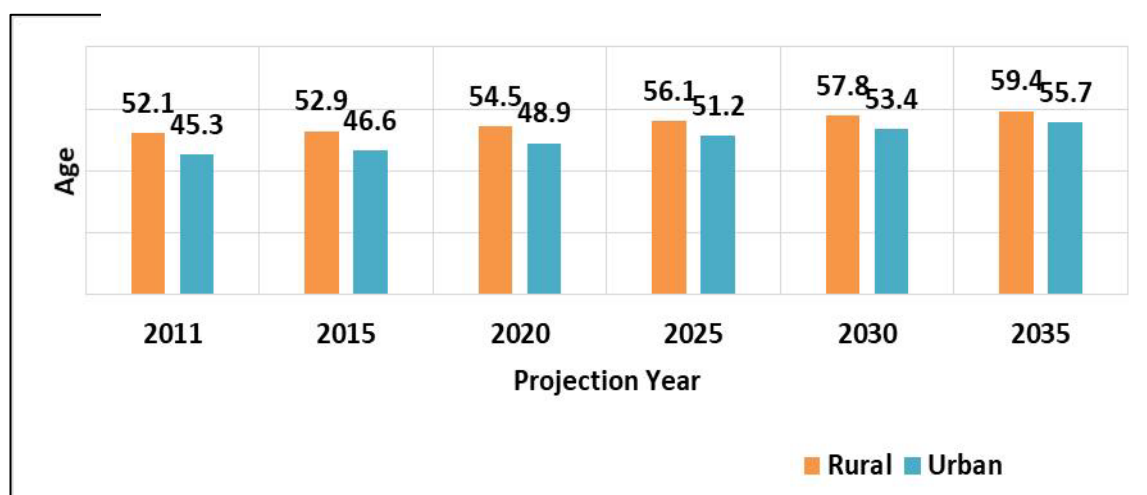

(2013 CSO Report: Population and Demographic Projections, 2011 – 2035)

2.1.10 Life Expectancy at Birth: Rural-Urban Differentials

Analysis on rural and urban shows that, in Kabwe district rural people live longer than their urban counterparts by roughly 5 years. This scenario has given impetus to the district IDP team to investigate why rural people live longer urban people. Is there a good lifestyle being practiced by rural people that could be copied by urban people or is it that urban people in Kabwe are highly exposed to lead poisonous?

Figure 16: Life Expectancy: Rural-Urban, 2011-2035

(2013 CSO Report: Population and Demographic Projections, 2011 – 2035)

2.1.11 Population Analysis for Key Ages

This section analyses the population composition for special groups in order to understand the potential contribution and impact of each group on the socio-economic development of the district. It is important to note, the data for the different age groups helps to determine the needs of each population, priority sectors of investment beneficial to the age group including forecasting for future trends in population.

2.1.12 Population in Age Group (0-4) Years

Figure 09 shows that population for under 5 will increase from 18,901 in 2015 to 31,482 in 2035. This population is also referred to as population for Early Childhood School going age.

Statistics have shown that, population of under 5 years is the most vulnerable group to infant mortality. Thus, particular attention should be given to this age group because of illnesses like malaria and respiratory diseases that are among the key causes of infant mortality. Above and beyond, sanitation and hygiene, good nutrition and up scaling of immunization facilities will be put into consideration while planning to address the needs of this category of population age group. This will help to reduce the under-five mortality rate.

It is worth mentioning that, growth in the same age cohort will necessitate investment in early childhood development as they prepare to join pre-school. Figure 09 depicts the projected population for the age group of under 5 years old.

Figure 17: Population Age Group (0-4) Years

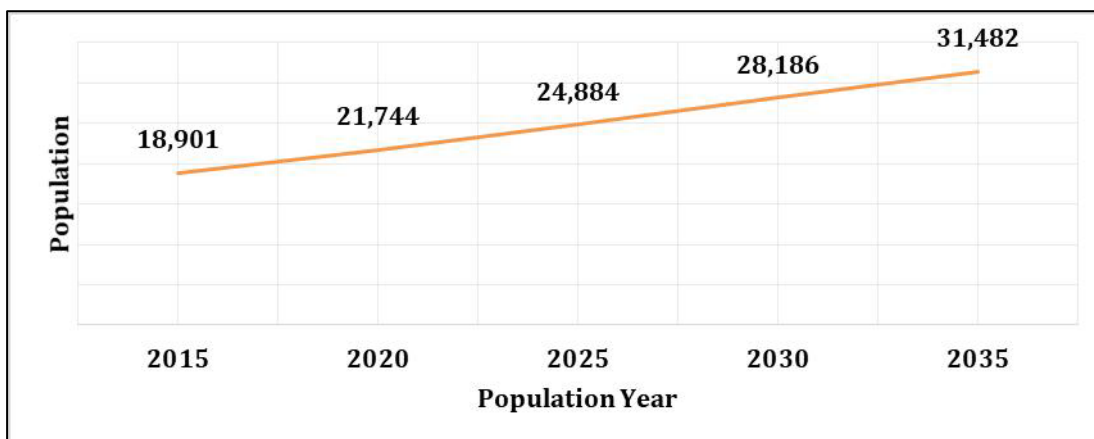

Figure 15: Population Age Group (0-4) Years

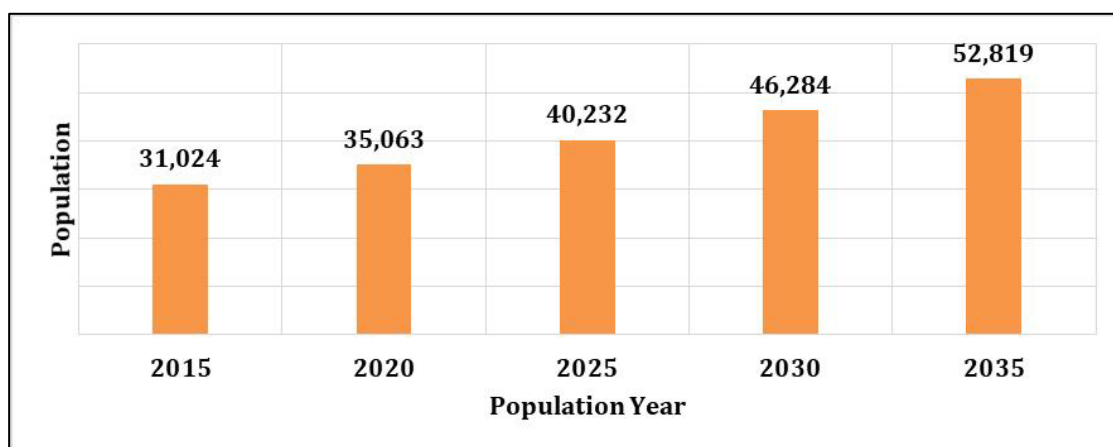

(2013 CSO Report: Population and Demographic Projections, 2011 – 2035)

2.1.13 Population in Age Group (5-14) Years

Assuming population continues to grow at the earlier mentioned projected growth rate of 1.3 % per annum, this will entail that, in 2035 the population in the Age Group (5 – 14) years will be roughly 52,819 people. This population is also referred to as population for the Primary School going age.

This entails investment in educational facilities becomes a major movement and this can only be done by increasing the number of classrooms and equipment as well as recruitment of teachers to cater for the increased population. This also will look into improving the Primary Schools as well as constructing new schools at primary level in the district.

Figure 18: Population in Age Group (5-14) years

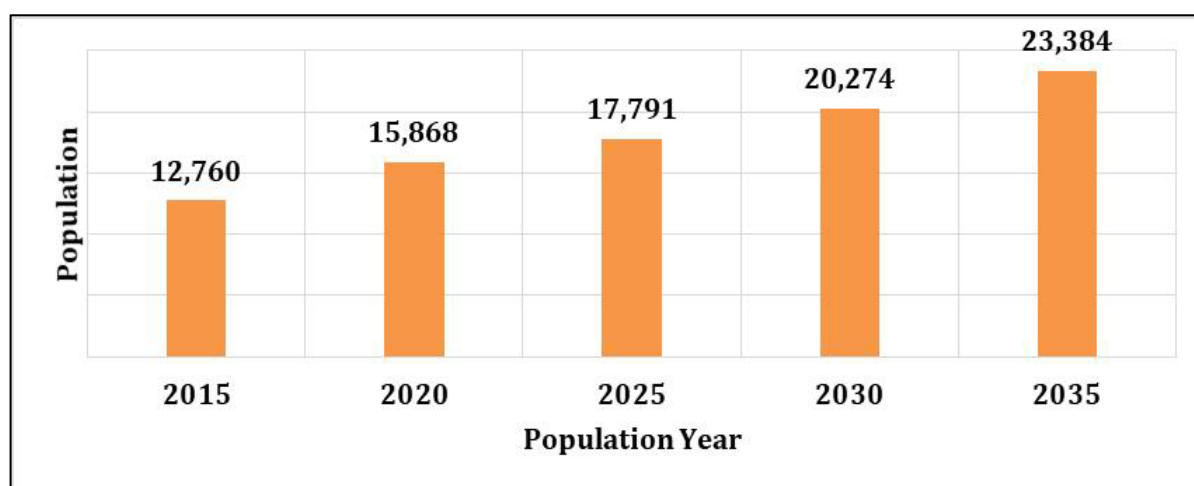

(2013 CSO Report: Population and Demographic Projections, 2011 – 2035)

2.1.14 Population in Age Group (14-19) Years

Assuming population continues to grow at the earlier mentioned projected growth rate of 1.3 % per annum, the population in the Age Group (14 – 19) years will be roughly 23,384 people. This population is also referred to as population for Secondary School going age.

This change entails investment in educational facilities becomes a major movement and this can only be done by increasing the number of classrooms and equipment as well as recruitment of teachers to cater for the increased population. This will include looking into improving the Secondary Schools as well as constructing new schools at Secondary level in the district.

Figure 19: Population Age Group (14-19) years

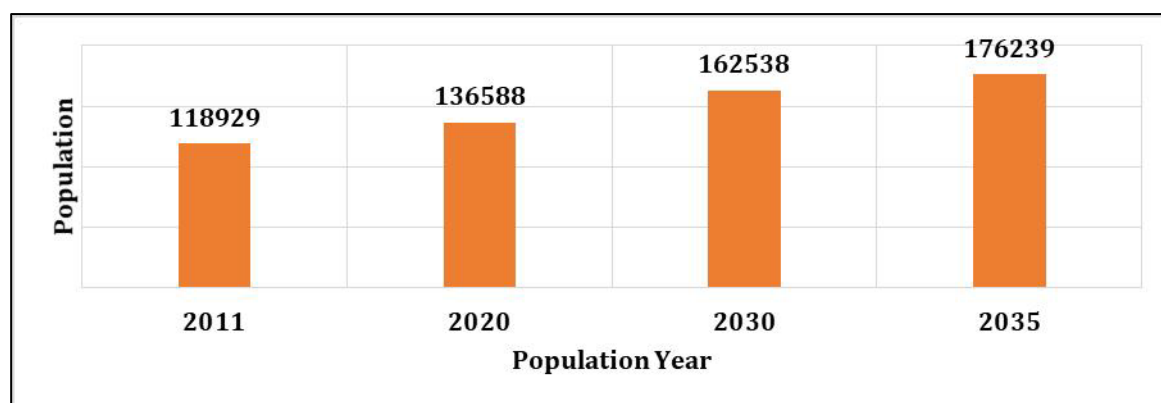

(2013 CSO Report: Population and Demographic Projections, 2011 – 2035)

2.1.15 Population in Economically Active Age Group (15 – 64) Years

Figure 12 depicts that, Population aged (15-64) years is expected to grow from 118,929 in 2011 to 176,239 in 2035. This population is also known as economically active population.

This growth in population entails more productivity in the district's economy. On the other hand, this change will lead to increased demand for jobs. There is need therefore for district to plan for more empowerment and skills development programs during the period of 10 years. Moreover, the district remains a preferred investment destination because of this readily available labour force.

Figure 20: Population Age Group (15-64) Years

(2013 CSO Report: Population and Demographic Projections, 2011 – 2035)

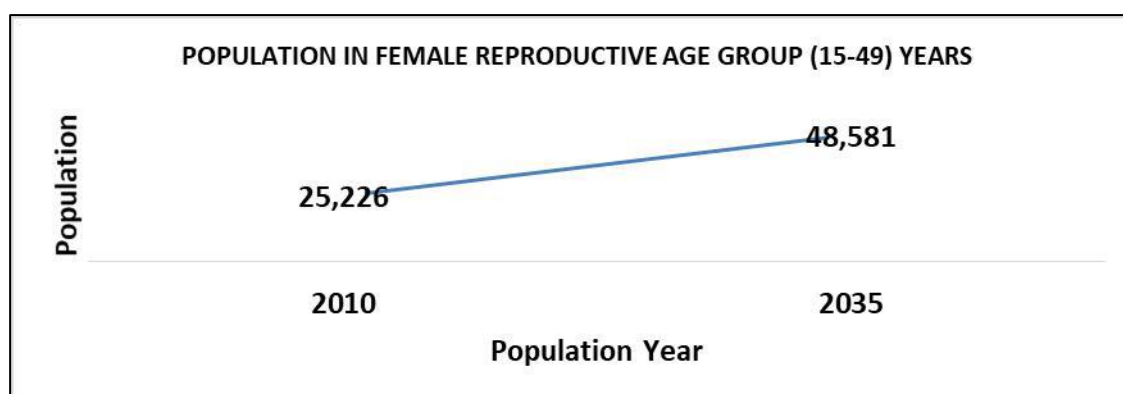

2.1.16 Population in Female Reproductive Age Group (15-49) Years

The female population aged 15-49 Years constitutes the reproductive age.

In Kabwe district, this population is projected to increase from 25,226 in 2010 (CSO, 2010) to 48,581 in 2035 (CSO Population and Demographic Projections, 2011 – 2035). This change requires increased investments towards strengthening reproductive and maternal health facilities.

The district through the Health Sector will also work to promote advocacy through the community units as well as to create awareness on the benefits of free maternity programme to ensure that all pregnant mothers are attended to by trained health care providers to reduce maternal mortality.

Figure 21: Population in Female Reproductive Age Group (15-49) Years

(2013 CSO Report: Population and Demographic Projections, 2011 – 2035)

2.1.17 Expected Population Behaviour during IDP Period

The observations made in the foregoing demographic analysis and population projection is likely to remain the same for life time of plan. The district's population growth is expected to grow at a relatively stable rate per annum. As for male-female population analysis, female population is expected to be higher than male. Equally, the population characteristics are not likely to change from the trends observed from the analysis.

In addition, the youth dependency burden is likely to continue for the planned period, this entails increased pressure for the district to provide public goods and services among them education, health, water and sanitation, and employment. As observed from Figure 02 above, the population age structure tends to be broader at the lower levels from ages 0 - 4 and gradually thins out with higher age groups to the peak of 80+ years, forming an expansive pyramid structure.

2.1.18 Impact of Population Trends on Land Use and Spatial Development

The increase in the district's population will have an effect on the available resources and how the resources will be managed and distributed throughout the entire district. Kabwe being a farming district, large parcel of land is in the hands of farmers and lack of alternative land has made it very difficult to deliver quality housing units. Actually over 60% of the district population depend on agriculture as a source of livelihood. The high rate of land use is high among the smallholder, commercial and subsistence farmers. Undoubtedly, increase in population will affect the overall usage of land for livestock and crop production, forestland cover and water bodies.

Moreover, just like other major towns, the growth of Kabwe is mainly absorbed by the informal settlements. This is mainly because of ever increasing population due to fertility and people who are drawn to the district for job prospects and access to better services. This will lead to expansion in the unplanned settlements and put a strain on the ability of the local authority and utility companies to deliver on developmental goals.

2.2 Assessment of The Existing Land Use and Settlement Pattern In The District

The following section gives a spatial analysis of the District in terms of its land use pattern, settlement distribution outlined as follows;

2.2.1 Spatial Analysis and Land use planning

2.2.2 Description of the Existing state of Land Use and Development

2.2.2.1 Existing Land Uses

The current land use pattern for Kabwe largely consists of agriculture, forest, commercial, industrial, residential and institutional. The figure below shows the existing land uses in the district.

Table 5: Land Use Type and Extent

Land use	Extent (Ha)
Farming	130,834.064265
Forest	13,004
Commercial	35
Housing	195,545.178913
Industrial	450.146682
Institutional	95
Cemetery	74
Total	340,037.39

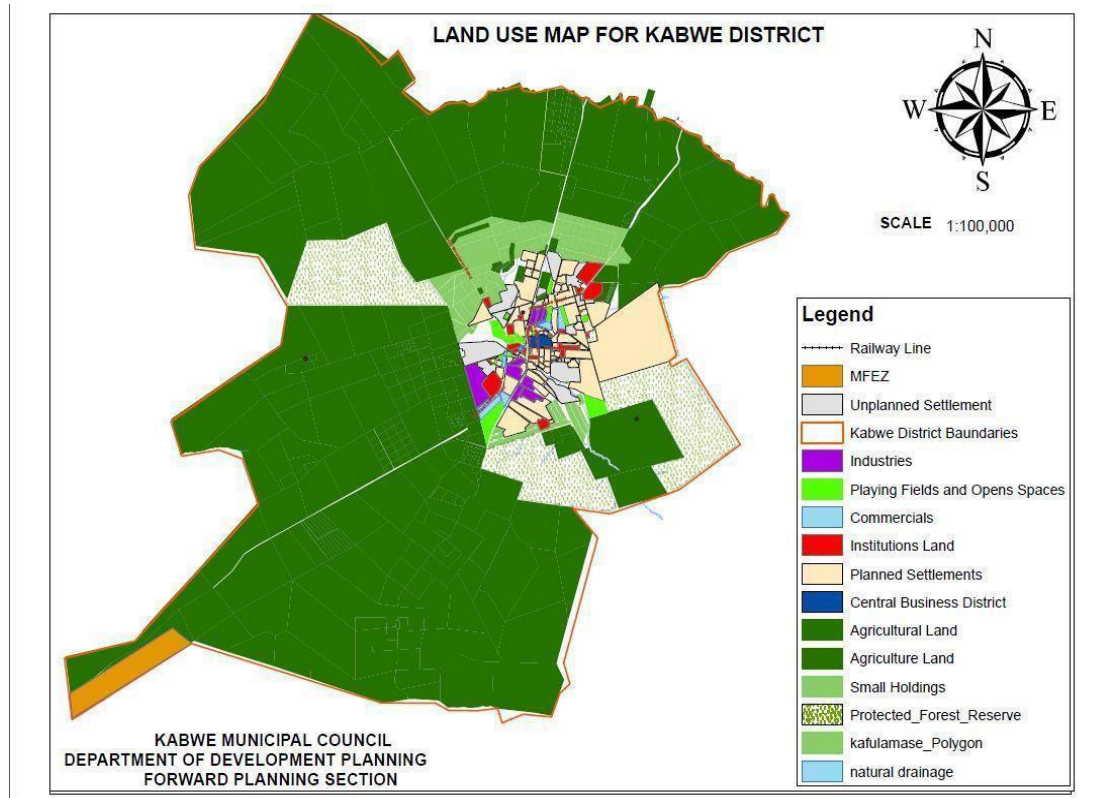

Source: KMC 2022

The table above shows that agriculture land is approximately 130, 834.06 hectares in extent while land for housing development is approximately 195, 545.178913 hectares depicting the largest land extent in the district. Other land uses such as industrial measures approximately 450.146682 Hectares.

2.2.2.2 Land Use Map

The land uses are depicted in the map below;

Figure 22: Land Use Map for Kabwe District

Source: KMC, 2020

Agriculture is predominant in the district and surrounds the peripheral of the district, the agrarian areas in the district include Muwowo East and West, located North East and West of the district, Chniyanja, Chankalamo, Munga and Mpima areas. Approximately 64% of the agrarian land is privately owned by the farmers, this renders it difficult for expansion of land for allocation by the Local Authority. To the East South and North West of the district are zoned protected forests which are Kabwe National Forest Reserve No. 31, Chibanga and Kalulu. The land zoned as commercial and residential is at the core of the district. The South Eastern part of the district has been partly zoned as Industrial area where the Kabwe Industrial Park is located. At the periphery of the district approximately 37 kilometers from the Central Business District is land zoned as Multi Facility Economic Zone.

2.2.2.3 Land Tenure system

All land in Zambia is vested in the President of the Republic of Zambia as enshrined in the Land Act of 1995. The total land area of Kabwe District is 1,572 Km² and all land in the district falls under leasehold (state land) tenure category

which, according to the Lands Act of 1995 provides for three types of leases as follows:

- i) **Fourteen (14) Year Leasehold:** This is given to un-surveyed land and must be renewed at the expiration of the period
- ii) **Occupancy Certificate:** a type of leasehold which gives the developer temporary access and user right for 30 years and applies to statutory housing improvement areas
- iii) **Ninety-nine (99) Year Leasehold:** where title to land is given to the applicant for a period not exceeding 99 years after which the lessee has to apply for renewal of the title

2.2.2.3 Overall Settlement Pattern of the District

The overall settlement pattern for Kabwe follows a concentric zone with commercial facilities located in the central business district area, surrounded by residential, industrial and mixed land uses. Most high- cost residential areas are located close to the Central business district and these include High ridge, Luangwa, Nhrumah areas. At the periphery of the district is land zoned for agriculture which constitute the largest proportion of the district in terms of land extent of approximately 130,834.064265 hectares in the hands of farmers. Low- cost areas are located at the fringe of the high- cost areas and these include Kasanda, Bwacha, Ngungu, Chimanimani.

2.2.2.4 Distribution of informal settlements

The rapid urban population growth of Kabwe as depicted in the demography analysis promotes the proliferation of informal settlements in the district. Kabwe district has 14 unplanned settlements which have since been earmarked for upgrading. These include Makululu the largest unplanned settlement in Sub Saharan Africa, Nakoli, Katondo, Kamuchanga, Kamushanga, Kawama, Kaputula, C-Gate Abdul, Shamabanse, Kawama, Makwati. The map below shows the distribution of informal settlements in the district.

Figure 23: Distribution of unplanned settlements in the District

The continued growth of population has had a profound impact on informal settlements in the district, exacerbating existing challenges and introduction of new complexities. This has resulted into the Local Authorities inability to keep up with the demand for infrastructure and services leading to a lack of integration and coordination in addressing the needs of these settlements. The informal settlements will create a mosaic form of development pattern with different levels of formality and infrastructure provision that will influence the overall settlement pattern of the district. The IDP in addressing the impact of population growth on informal settlements will undertake a holistic approach that will focus on urban planning, infrastructure development, social services and policies aimed at creating sustainable and inclusive urban environments. The strategic focus of the IDP will be on upgrading informal settlements, improving access to basic services and creating economic opportunities to improve the living conditions of the community.

URBANIZING SETTLEMENTS AND GROWTH NODES IN KABWE DISTRICT

2.2.2.6 Urbanizing settlements and Growth Nodes

The district has been experiencing a transitioning of some settlements such as Kangomba area from a rural setting to a more urbanized environment. This has been evidenced by increased construction of residential buildings and commercial centres. The urbanizing of Kangomba rural area may be attributed to its close proximity to the Great North Road which places it at a more advantageous point in terms of easy accessibility to the Central Business District. Other contributing factors could be easy access to land and its close proximity to the Kabwe Industrial Park. The Kabwe Industrial Park though not fully developed provides an opportunity for economic growth and development as it will accommodate various industries in manufacturing and processing. Munga rural settlement situated along great north road approximately 22 kilometers from the Central Business District is yet another area that has transformative potential of evolving into a growth node catalyzed by the Multi Facility Economic zone. The establishment of the Multi Facility Economic Zone being developed by China Jiangxi Corporation has created a diverse range of economic opportunities to Munga and its surrounding communities, hence supporting the overgrowth of the settlement.

Chililalila area also has the potential to evolve into a dynamic urbanizing settlement and growth node, providing economic opportunities, infrastructure and high quality of life for its residents. The Local Authority has planned for an industrial yard approximately 25 hectares the Citizen Economic Empowerment Commission (CEEC) situated 8.3 kilometers from the Central Business District. The propose industrial yard will attract business opportunities, employment creation and stimulate economic growth of the district. The figure shows the urbanizing settlements and growth nodes in the District.

2.2.2.7 Assessment of the Availability of Land for Planned Urban Expansion

The district is hampered by limited land for expansion about 64% of the existing land use is agriculture land held in private hands, however, the Local Authority has opened up land for expansion of approximately 1954 hectares in the newly excised Kabwe National Forest Reserve No. 31 locally known as Mpima area. The area is located approximately 12 kilometers from the Central Business District and envisions the new Kabwe that will house various infrastructure development. During the IDP implementation focus will be on integrating land use planning that will prioritize sustainable development and minimize the ecological footprint.

2.2.2.8 Assessment of the Impact of The Continuation of Population Growth on Other Land Uses and the overall settlement pattern of the district

The continued population growth exerts significant pressure on various land uses in the district. The district has experienced an increase in demand for residential, commercial, industrial and urban spaces resulting into changes in land use zoning to accommodate the diverse needs of the growing population. The increased demand for land for various uses will likely lead to densification that will be characterized by construction of high-rise buildings and vertical expansion altering the traditional low rise and midrise settlement pattern. Further, the rapid population growth will promote urban sprawl where new residential and commercial zones will develop in the peri urban areas of the district with implications for transportation and infrastructure planning. Therefore, influencing the layout and connectivity of the district through the establishment of transportation and service networks.

THEMATIC ANALYSIS

3.0. Economic Sector

The Economic sector is anchored on the core issues emanating from Agriculture, Fisheries and Livestock, Transport, ICT, Commerce and Trade. The aforesaid sectors are key drivers in transforming the economy of the district and in creating employment for the local people.

3.1 Agriculture

3.1.1 Key Government Priorities Being and To Be Implemented at A Local Level

The Ministry of Agriculture Kabwe district taps into the National agricultural extension and advisory services strategy of 2017-2020 and the second National Agricultural Policy implementation plan of 2016 - 2020. The Government has focused on implementing the following strategies;

3.1.1.1 Expand agriculture infrastructure

The district has a plan in place to construct camp houses and block offices for effective and efficient delivery of extension services and to convert the Mutwe wa nsufu office blocks (former old boma offices) into the farmer training centre (FTC) which will be highly beneficial to our smallholder farmers in the district. FTCs facilitates for farmer tailored training as well as on- farm trials and demonstrations of proven innovative technologies.

3.1.1.2 Improve capacity for agriculture extension officers

Inadequate in-service training results in gaps in knowledge, skills and practices contribute to delivery of ineffective extension and advisory services that leads to poor adoption and adaption of innovation hence low production and productivity. Capacity building of extension of extension staff has also been one of the key elements in the district and training plan has been done.

3.1.1.3 Promote Diversification within the Agriculture Sector

Small holder farmers are being sensitized on the importance of growing a variety of crops and engaging in different agricultural activities that will ensure food security and increased income generation at household level. The nutrition aspect is equally emphasized through trainings and demonstrations in order to impact knowledge on

the nutritional importance of the foods they produce and how to utilize them for a healthy and productive life. Agriculture extension services therefore play a key role in ensuring that appropriate skills, knowledge and messages are disseminated on (i) Dietary diversity that will include utilization of local indigenous foods and animal protein, (ii) Production diversity to include fish and livestock, (iii) Food Storage and Processing, (iv) Seasonal food use (crop choice and storage) and (v) Food safety.

3.1.1.4 Improve production and productivity

The Availability of well-defined extension structures at the district levels and Presence of Agriculture Research Stations within the district has made it possible to promote a number of innovations and improved technologies in order to improve on district yield. Farmers have been trained and introduced to these innovations and technologies. The major ones being use of simple irrigation systems, farm power & mechanization and certified seeds.

3.1.1.5 Enhance Agriculture Value Chains

Farmers' capacity built on value addition skills and knowledge to take advantage of the existing and growing local and international markets for agricultural products.

3.1.2 Description of the Existing State of Development

3.1.2.3 Availability of Service Including Key Indicators of Performance

Agriculture in Kabwe district is one of the key priority sectors that contribute to economic growth and poverty reduction. The agriculture sector has also emerged as an important foreign exchange earner. Despite the growth in the sector, agriculture has continued to be hampered by challenges such as low production and productivity, little value addition, over dependence on rain fed crop production, limited capital and market access for small scale farmers, Inadequate storage facilities and high post-harvest crop losses.

These can only be addressed through; promotion of improved productivity through diversification of both field and horticultural crops. Promoting access to inputs by making the inputs available to the target groups. Promoting good agricultural practices will have to be an integral part of land management and which will address low levels of improved input adoption, poor response to fertilizer due to high soil acidity and low adoption rates of conservation agriculture. Promotion of irrigation will minimize dependence on rain fed crop production. Mechanization of crop production systems, including the use of animal draught power is another good

agriculture practice which will primarily address the challenge of low levels of improved input adoption caused by limited cultivated land due to labour constraints. Additionally, mechanization is also expected to address the challenge of poor returns to fertilizer application through timely undertaking of crop husbandry practices following increased efficiency of undertaking such practices. Construction of storage facilities in different locations in the district will minimize post-harvest losses.

3.1.2.1 Crop production

The major Field Crops grown in the district are maize, soya beans, sorghum, mixed beans, wheat, groundnuts, sweet potatoes, tobacco and cotton. Minor crops included sunflower, millet, mbambara nuts, popcorn, cowpeas etc. Horticultural Crops: Tomatoes, cabbages, rape, okra, impwa, onion, guavas, mangoes, and water melons are grown. The table below shows the total crop production (MT) for the district from 2017 to 2021.

Table 6: Trend of Production in metric tonnes 2017-2021

YEAR	2017	2018	2019	2020	2021
CROPS					
Maize	27,956	15,079.91	17,576	35,289	25,925.95
Soyabeans	14,315	11,200.43	7,961	7,626	10,772.16
Mixed beans	144	102.16	93	142	208.69
Sorghum	3	25.53	1	29	230.38
Sunflower	18	497.83	36	270.64	367.84
Sweet Potatoes	453	1650.73	70	1,073	2,658.57
Groundnuts	688	699.69	227	669	571.84
Cowpeas	228	261.61	1	13	622.27
Irish Potatoes	2,425	550	966	12,286.28	2,794.21
Virginia Tobacco	178	80	828	194	175.76
MoA, 2022					

Production of Maize has been fluctuating with production figures going from 35,289 MT during the 2020 farming season, to 15,079 MT during the 2018 farming season and back to 27,956 MT during the 2017 farming season. These fluctuations are evident in the harvested area of the crop as indicated in the table above.

Kabwe district has the potential to increase its agriculture production as it has favourable weather patterns and abundant arable land. The fluctuations indicated by the information paint an overall picture that is undesirable. This picture can,

however, be changed with considerable investment in climate smart technologies, increased sensitization on the use of sustainable farming practices and mechanization equipment.

3.1.2.1.1 Average yield per crop (per hectare) for the district from 2017 to 2021

The table below shows the Average yield per crop (per hectare) for the district from 2017 to 2021.

Table 8: Average yield per crop (per hectare) for the district from 2017-2021

	2017	2018	2019	2020	2021
CROPS					
Maize	3.14	4.07	1.98	2.9	2.90
Soyabeans	2.31	3.92	1.75	1.96	1.90
mixed beans	1.16	0.79	0.62	1.29	2.61
Sorghum	0.37	1.70	0.50	0.44	1.87
sunflower	1.20	2.20	0.41	0.91	0.76

Source: MoA. 2021

As can be seen in the above table, the average yield of maize per hectare in the 2018 farming season was the highest followed by the 2017 farming season. For mixed beans the highest the 2021 farming season and the lowest was the 2019 farming season.

3.1.2.2 Block Profiles in Kabwe District

The table below shows the Blocks profile of the district

Table 9: Block profiles in Kabwe District

Block Name	No. of camps	No of zones	No of villages	No of HHs	Number of Farmers		
					M	F	Total
Munga	5	21	41	7666	8,892	9,609	18,501
Munyama	4	14	16	4257	3,828	3,919	7,747
Waya	8	23	42	7820	9,413	11,007	20,420
Mpima	2	8	7	3238	1,692	1,907	3,599
TOTALS	19	66	106	22,981	23,825	26,442	50,267

Source: MoA 2022

3.1.2.3 Distribution of farmers according to gender

The district has about 50,267 registered smallholder farmers under the ministry of agriculture with about 24,928 farmers who receive fertilizer support. While there are still some industrial activities happening in the manufacturing, transport and mining sector, the majority of residents are involved in agriculture. The district has 4 agricultural blocks and 19 agricultural camps spread out within the district which translates into an Extension officer to farmer ratio of 1:2600 which is far below the recommended extension officer to farmer ratio of 1: 600

The district has 26,442 female smallholder farmers which translates to 52.6 percent of the total registered farmers in the district while male smallholder farmers has about 23,825 which translates to 47.4 percent of the total registered farmers in the district. The district has a total number of 118 commercial farmers practicing both livestock and crop production.

The figure below shows the distribution of smallholder farmers according to gender.

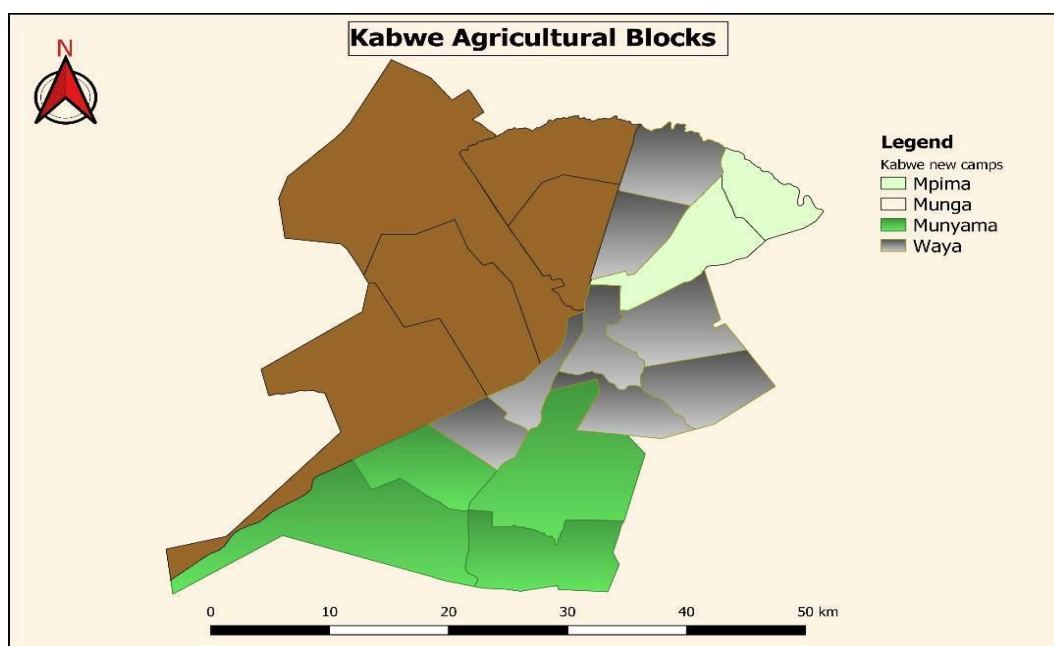

Figure 20: Farmer Distribution by Gender

Source: Ministry of Agriculture, 2022

The district has 19 camps that are grouped into four blocks namely Munga (5 camps), Munyama (4 Camps), Waya (8 Camps) and Mpima (2 camps). The map of agricultural camps map is shown below.

Figure 24: Kabwe Agricultural Blocks

Source: Ministry of Agriculture

The ministry also works with a number of farmer groups in the district. Prominent among these are cooperatives and clubs. There is also Kabwe Farmers Association which gets membership from across the district. Below is a summary of cooperatives and clubs by camp in the district.

3.1.2.4 Inventory of farmer organizations in the district

The district has a total number of 592 registered groups of which 445 are cooperatives, 146 are clubs and 1 is a district farmer association. 592 registered groups have a paid-up membership of 19177. The table below shows the district Inventory of farmer organizations.

Table 10: Inventory of Farmer Organizations in the District

Camp name	Applied membership	Cooperatives	Clubs	Total groups
Mpima	1300	24	16	40
Seminary	958	15	12	27
Musebo	355	7	1	8
Munyama	807	16	2	18
Kalwelwe	959	17	2	19

Camp name	Applied membership	Cooperatives	Clubs	Total groups
Kawayya	1172	29	5	34
Chililalila	1646	37	11	51
Munga	826	16	8	24
Kawama	2250	69	24	91
Mukobeko	1259	23	8	31
Waya	2399	59	21	80
Kafulamase	1014	25	10	35
Kangomba	1643	44	4	48
Natuseko	2589	64	22	86
	19177	445	146	592

Source: Ministry of Agriculture, Kabwe 2022

3.1.3 Impact of the Changes Anticipated over the Next 10 years

Population projection

According to the 2022 Kabwe district farmers register there is 61,223 smallholder farmers in the district. However, its projected that the population of smallholder farmers in the district will increase to **62,019** by 2023, **62,825** by 2024, **63,642** by 2025 and **64,469** by 2026 with an annual growth rate of 1.3 %. The figure below gives the details.

Table 11: Number of Registered Small- Scale Farmers

Block Name	Total Farmers in 2022 per Block	No. 2023 projection	2024 projection	2025 projection	2026 projection
Mpima	4,826	4,889	4,952	5,017	5,082
Munga	23,082	23,382	23,686	23,994	24,306
Munyama	9,829	9,957	10,086	10,217	10,350
Waya	23,486	23,791	24,101	24,414	24,731
Totals	61,223	62,019	62,825	63,642	64,469

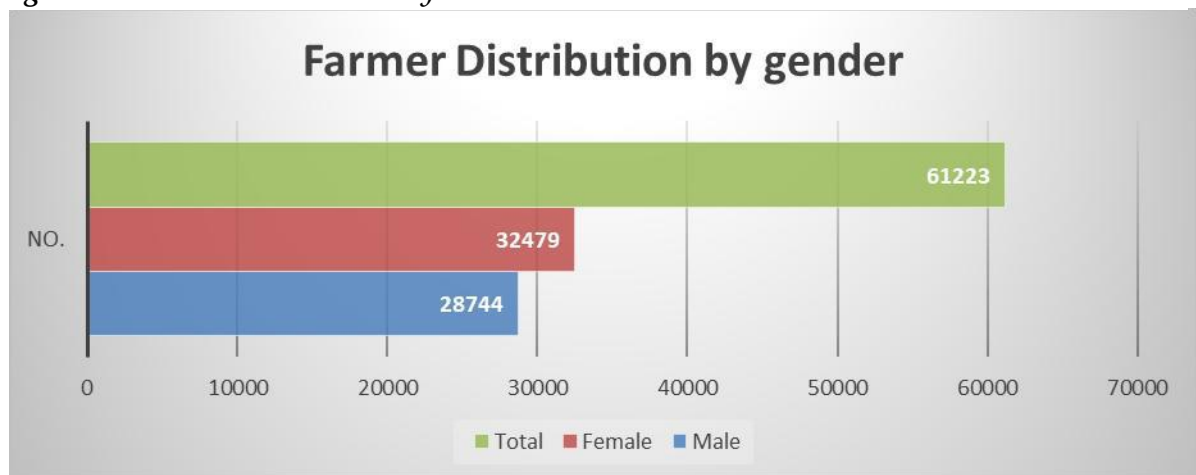

Source: Ministry of Agriculture, Kabwe 2022

The table above reveals that the smallholder farmer's population in the Kabwe is steadily increasing. The smallholder farmer population is expected to increase due to the improved access to medical care, food and nutrition, improved life expectancy and influx immigrants.

The projected smallholder farmer population for 2023 reveals that Waya block has the highest farmer population of 20,685 representing a percentage of 40.6 % in comparison with the other Agricultural blocks in the district. This can be attributed to the fact that waya block is located in the high-density areas in the district. On the other hand, Munga block accounts for the second highest number of farmers in the district followed by Munyama and then Mpima block.

Smallholder farmers' distribution by gender projection shows that, the district will have 32,479 female smallholder farmers which translates to 53 percent of the total registered farmers in the district while male smallholder farmers are about 28,744 which translates to 47 percent of the total registered smallholder farmers in the district and it's illustrated in the chart below.

Figure 25: Farmer Distribution by Gender

Source: Ministry of Agriculture

3.1.4 Impact of the Continuation of Existing Trends on Population and Settlements

The continuation of the existing trend on population increase has a serious impact on a number of other available resources such as human resource, equipment, infrastructure and arable land. However, collaboration with non-governmental organizations will complement and supplement government efforts on needs concerning human resource development and provision of equipment and infrastructure.

3.1.5 Environment and Climate Change

The impact on land due to the increase in farmer population and non-environmentally friendly farming practices can lead to negative impacts on the environment and climate in the long line. To avert this the sector plays an important role in sensitization, training farmers and facilitating smart agricultural activities in the communities.

3.1.6 Gender and Vulnerable Groups

Agriculture sector recognises the contribution of both male, female and youth farmers in the district. However, there are socio-cultural factors at play especially in the rural parts of the district where certain crops like groundnuts are considered to be female crops and maize male crop which is to some extent unproductive. The role of the sector has been to sensitize and train both gender on gender issues that will result in increased production and productivity and income generation.

3.1.7 Summary and Consideration of Underlying Issues

The agricultural sector at district level has inadequate staff, infrastructure and transport. However, the sector still strives to ensure that there is provision of adequate and quality extension services.

The table below shows a summary of core issues that were raised during the public participation process.

S/N	Core Issue	Wards/Area Affected
1	Lack of a farmer training center	All wards
2	Not enough Agriculture Infrastructure such as, camp houses, Agriculture Block Offices.	All wards
3	High post harvest losses loss of crops	All wards
4	High dependence on rains	All wards
5	Low practice of value addition.	All wards
6	limited market access and capital for small scale farmers	All wards
7	Inadequate number of farmers benefitting from the farmer input support Program (FISP) across the district	All wards
8	Low practice of mechanization farming methods	All wards
9	Poor Agricultural Extension Service delivery	All wards

3.2 Fisheries and Livestock

3.2.1 Key Government Priorities Being and To Be Implemented at a Local Level

At district level, the Ministry provides the following services to the public: Animal Health services are provided by way of clinical services at the clinic situated at the provincial/district veterinary premises. Services include, but not limited to routine vaccination of pets, as well as treatment of various ailments. Under Department of Fisheries, the Ministry offers technical support in pond construction as well as stocking the ponds and training sessions to members of public wishing to venture in aquaculture. The government is fostering aquaculture development in the district, resulting in an increase in the number of aquaculture activities, with both small-scale and emergent (smallholder) farmers involved. The following projects are being implemented in the district to promote fish farming;

- Zambia Aquaculture Enterprise Development Project (ZAEDEP): The project is providing loans to individuals with four (4) individual beneficiaries financed for fish production in the district.
- Zambia Mining Environmental Remediation Project (ZAMREP): The project is supporting seven (7) cooperatives in the district to produce fish
- Zambia Agricultural Transformation Programme (ZATP): supporting one cooperative in fish production. The Ministry of Fisheries provides training at lower levels, such as fish farming training

Livestock Identification and Traceability is a service offered under the Department of Veterinary Services. This activity, as opposed to the past, is exclusively started and completed at the district level, with Ministry Headquarters only coming in to issue the identification marks, commonly called “brand marks”.

Dairy Industry Development is offered by the Department of Livestock Development. The Ministry of Fisheries and Livestock is anchored on two pieces of legislation, ie the Animal Health Act No, 27 of 2010 (Department of Veterinary Services), the Fisheries Act No, 22 of 2011 (Department of Fisheries and Livestock). The Department of Livestock Development has a policy, but no supporting law, just as the Department of Veterinary Services has law, but with the policy still in the development phase.

3.2.2 Description of the Existing State of Development

The livestock populations by district are as given below, There is no standard measure of livestock units that should be kept by each household. However, Kabwe District, with the current prevailing weather and climatic conditions can support much more livestock than the current figures.

Table 12: District Population for Livestock

Livestock	District Population	Provincial Population
Cattle	7,949	743,595
Goats	12,253	578,825
Sheep	500	23,462
Pigs	3,913	93,225

Source: 2017/2018 National Livestock and Aquaculture Census (Includes livestock populations from Itzhi-tezhi District)

The Ministry of Fisheries and Livestock and all its previous equivalent/forms of the Ministry has not been regularly carrying out livestock census. However, going forward, just like Crop Forecast under Ministry of Agriculture, there shall be a livestock census conducted annually.

Apart from Foot-and-mouth Disease (FMD), that was reported for the first time in Kabwe District, on 23rd June 2019, the other major economic disease is East Coast Fever (ECF) transmitted by ticks. Whereas FMD mainly affects productivity (growth rate in beef and milk production in dairy), ECF affects production (the mortality rate in areas where the outbreak is occurring for the first time could reach 100%).

There have been vaccination against FMD, but the erratic availability of vaccine, due to demand outstripping supply by the only source in Southern Africa, Botswana Veterinary Institute (BVI), the vaccination drive has fallen short of the required three (3) rounds of vaccination, viz, the first round, followed by the first booster at thirty (30) days and the final booster at day sixty (60). There is therefore need for a more consistent source of the vaccine, or local production. For 2022, the District only

managed to vaccinate the first round, i.e. twenty one thousand (21.000) doses, when a total of 63,000 doses for three rounds, were required, representing 66.67% success.

East Coast Fever has a number of preventive as well as control measures and no single method works best. Tick control by applying chemicals on the bodies of cattle is the major preventive method. Livestock Movement control is yet another prevention method, as is treatment. To date (2022) a total of 127 cattle, all owned by small scale livestock farmers have been lost to ECF. Additionally, up to K70, 000.00 has been used to procure dipping chemicals and drugs for treating animals. Half of this amount was spent on cattle that later died (District Monthly Reports and Personal Com).

There are a total of five dip tanks, one each in Munyama Veterinary Camp, Waya Veterinary Camp, Munga West Veterinary Camp, Munga North Veterinary Camp and Mpima Veterinary Camp. Of these, only the Mpima and Munga West facilities are operational. For a district population of 7,949, there is need for at least 8 functional dip tanks/spray races if ECF has to be controlled.

In terms of fisheries activities, there is not much of capture fisheries activities due to inadequate natural water bodies in the district. Therefore, aquaculture is the primary fisheries activity in Kabwe. There has been an increase in the number of aquaculture activities, with both small-scale and emergent (smallholder) farmers involved. Fish farming is mainly conducted in ponds, 45 ponds have been registered under the Department of Fisheries. Currently 15 cooperatives and 77 farmers are practicing fish farming. Approximately 10 metric tonnes of fish is produced annually. The main species farmed is a three spotted bream. Aquaculture produced in the district are mainly consumed locally. Kabwe has a valuable market due to dense population. There is also a good market opportunity in the neighboring towns. Fish is mainly distributed as fresh with a little processed and distributed as salted, smoked-dried and frozen. Though aquaculture offers opportunities for increased income and economic growth of the district, it is affected by the following constraints:

- Soils have low water retention capacity necessitating expensive dam liners
- There is no local hatchery and fingerling are sourced from as far as Chirundu
- High cost of feed
- Inadequate financing for aquaculture activities

3.2.3 Issues Arising from the Public Participation Process

The major issues arising from the public participation process were;

- i. The need to construct at least one abattoir in the district, all livestock slaughters must then be conducted at this abattoir. The abattoir could aid the department of veterinary services a lot in terms of disease surveillance

and capture of the number of slaughters for calculating the livestock sector's contribution to the district economy. It would make meat inspection easier pursuant to Animal Health Act No. 27 of 2010 and The Public Health Act Cap. 295.

- ii. Build more tick control facilities to prevent/ manage tick-borne diseases, especially ECF.
- iii. To heighten patrols so as to control illegal fish and livestock movements and curtail spread of infectious livestock diseases as well as depletion of fish stocks in natural water bodies.
- iv. Inadequate processing or value adding chain for fisheries products including cold storage
- v. Lack of hatchery
- vi. Lack of a central bulking market center

3.2.4 Impact of Changes Anticipated Over the Next Ten Years

With more land being opened up for agricultural use, in the next 10 years it is anticipated the livestock population, exemplified by cattle population would have increased by approximately 8 fold, the current number (taking one mature female cow to calve down once every one year).

3.2.5 Environment and Climate Change

Cattle are the number one agricultural source of greenhouse gases worldwide. Each year, a single cow will belch about 220 pounds of methane. Methane from cattle is shorter lived than carbon dioxide but 28 times more potent in warming the atmosphere (Mitloehner, a professor and air quality specialist in the Department of Animal Science, University of California). Therefore, as the district increases the stocking density, measures to counteract the disastrous effects of greenhouse emissions should be put in place.

3.2.6 Summary of the core issues

The table below shows a summary of the core issues under Fisheries and livestock sector

S/N	Core issue	Ward/Area Affected
1	Existing abattoir in a deplorable state	Industrial area in Luangwa ward
2	Inadequate infrastructure for disease control such as dip tanks, spray races	Chinyanja, Muwowo East, Muwowo West and Luansanse, Munga West, Munga North, Munyama, Kafulamase Mpima
3	Lack of cold storage facilities	All wards
4	Lack of a bulking centre	All wards
5	Lack of a local hatchery	All wards

3.3 Commerce, Trade and Industry

The closure of the Kabwe mine, the Mulungushi Textiles and other supporting industries led to a significant economic decline in the district. Kabwe had a number of manufacturing industries including the Zambia-China Mulungushi Textiles plant established with Chinese investment in the 1980s, but after suffering large losses at the beginning of 2007, the plant was closed to date.

Outstandingly, also other industries like ZALCO, FALCO, FVG, KIFCO, National Breweries, Sable Zink, Chiman Manufacturing Ltd, Fine Steel, Supper Deal, Dunavant and the reopened Zambia Railways, are running low. Currently another economic threat seems looming as there is a pending shift of the Zambia Prisons and Correctional Service Headquarters from Kabwe to Lusaka.

However, the district's economy is expected to be boosted by the newly constructed Multi Facility Economic Zone (MFEZ). The infrastructure, which is part of Jiangxi United Industrial Investment Limited's US\$600 Million investment in Zambia, is being developed on 2,089 hectares of land, about 88Km from Lusaka and about 42Km Kabwe. The Multi Facility Economic Zone (MFEZ) is the biggest Chinese Investment in Kabwe and Central Province at large. It will create new industrial city integrating Agriculture, Industry, Commerce and Trade, Logistic Services, Leisure and Living¹.

Furthermore, the incoming in of ZALCO a private company that produces various kinds of cables and serves the national and international market is likely to boost the district's economy even further. ZALCO produces metal works of various machines, pots and tools. Many building companies function in the municipality. These firms have the material, technical expertise and manpower to undertake various kinds of construction and installation work.

It is worth also to note that, the commercial sector in the district is relatively active and employ a good number of people in wholesale and retail shops. The Light industry is well developing, represented by dairying enterprises and enterprises for the production of bread, breadstuffs and metal works. The municipality's economy is also supported by the establishment of the Kabwe Mall, Coronation Park, Mulungushi University, Nkrumah University, Paglory College of Education, Imaculata College of Education, Headquarter establishment of Zambia Prisons and Correctional Services and Zambia Railways".

Nevertheless, just like any other district around the country and the world at large, the district's commerce and trade have been adversely affected in the recent past by COVID -19 cases. The COVID 19 pandemic has had a negative impact on most business enterprises whose crippling effects have been felt to the extent that some of the businesses (especially small business) have failed to survive the pandemic.

3.3.1 Key Government Priorities Being and to be Implemented at a Local Level

The district has continued to benefit from national empowerment programmes such as those supported by the Citizen's Economic Empowerment Commission (CEEC) as shown in Table 32. A total of 126 business activities were supported by CEEC from 2011 to 2019. Dairy business activities recorded the highest at 65 followed by General Trading at 32. With an increasing population, it is essential to grow of the economy of the district. Agriculture activities such as crop production and rearing of livestock contribute to the economy and household food security.

Table 13: Business Activities supported by CEEC in the District

S/No.	Type	Number
1	Auto Spares	2
2	Block Making	2
3	Metal Fabrication	1
4	Road Paving (Construction)	3
5	Dairy	65 (2 Processing)
6	Mining (Gemstone)	1
7	Mixed Farming (Agriculture)	11
8	Poultry	3
9	Tourism (Lodges and Restaurants)	5
10	Transport	1
11	General Trading	32

GRZ, 2019

The percentage of population below the poverty level in Kabwe District was 49.8 percent in 2007 and 33 percent in 2015 (CSO 2007, World Bank and CSO 2015). To reduce poverty and increase household food security, government had put in place a number of interventions such as Public Welfare Assistance Scheme (PWAS) and Social Cash Transfer programme. In 2019, 583 beneficiaries received food ratios under PWAS and 4,680 received support through the social cash transfer programme².

In addition, the district is also implementing the Constituency Development Fund

(CDF) catering for two Constituencies, Bwacha and Kabwe Central. The rationale behind the Constituency Development Fund (CDF) is to spur the district's economic activities through the provision of empowerment schemes such as grants and loans to youths, women, people living with disability and other vulnerable persons in communities so that they can venture into income generating activities in order to accelerate inclusive social-economic development in the district and the country as a whole.

The district's economy is also expected to be boosted by the newly constructed Multi Facility Economic Zone (MFEZ). The infrastructure, which is part of Jiangxi United Industrial Investment Limited's US\$600 Million investment in Zambia, is being developed on 2,089 hectares of land, about 88Km from Lusaka and about 42Km Kabwe. The Multi Facility Economic Zone (MFEZ) is the biggest Chinese Investment in Kabwe and Central Province at large. It will create new industrial city integrating Agriculture, Industry, Commerce and Trade, Logistic Services, Leisure and Living³.

3.3.2 Description of the Existing State of Development

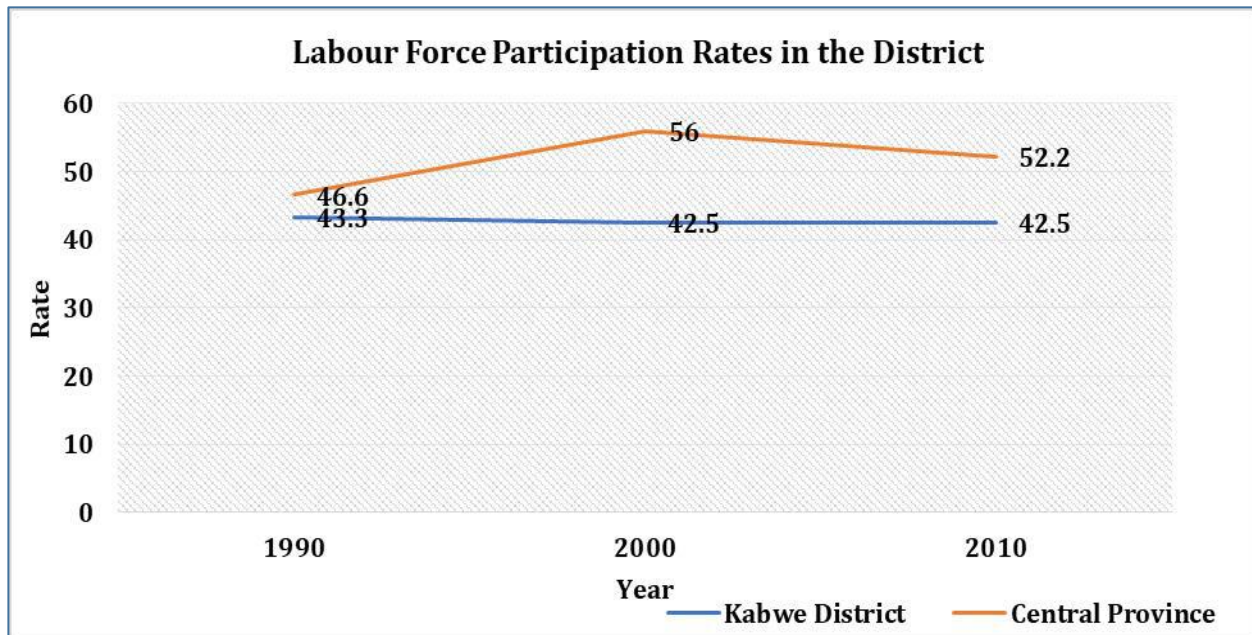

The district is well connected to other towns and provinces within Zambia and beyond by the Great North Road and railway line. The district's strategic location linked by rail and road networks makes it accessible to other markets and offers opportunities for diverse investment. The current main economic activities in the district include trading, agriculture and agro-processing, manufacturing, mining and mineral processing. The district provides a ready market for the commercial and other sectors within the district.

The labour force participation rate, which is the ratio of the economically active population to the working age population expressed as a percentage stood at

Figure 26: Labour Force Participation Rates in the District

42.5% (CSO, 2014) in 2010.

CSO, 2000 and 2010

The labour participation rates remained relatively low over the years depicting a high proportion of economically inactive persons. In addition, the district had an unemployment rate of 25.1 percent in 2010 while that of the Province stood at 12.7 percent (CSO, 2010).

3.3.2.1 Informal and Formal Sector Analysis

Business entities in the district are comprised of both informal and formal sectors. According to the records with the Zambia Revenue Authority and the local authority, the total number of formal business enterprises in the district is estimated to be 1200 with an estimated population of at least 8, 0000 enterprises in the informal sector.

Kabwe has a broad informal trade and trade market. The bulk of the informal enterprise are in the Central Business District and also dotted elsewhere in some parts of the district. The retail trade accounts for 38% of the informal sector businesses whilst retail trade via stalls accounted for 57% of the businesses. The other economic activities are fewer in proportion with manufacturing, hairdressing and other beauty treatment, transport, restaurants, bars and canteens.

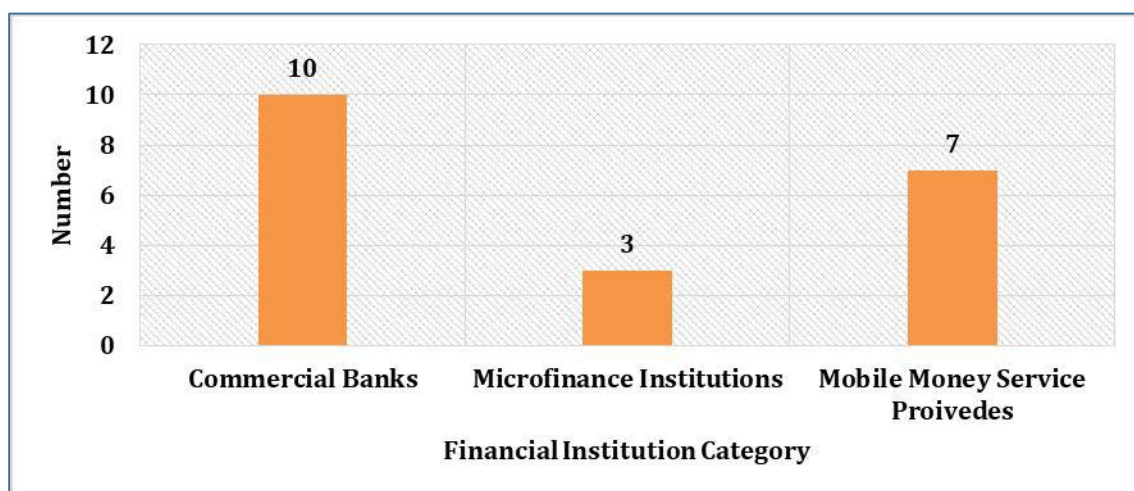

3.3.2.2 Financial Institution Analysis

The district has almost all major financial institutions in Zambia which include international banks, local banks and micro financial firms. There are ten (10) branch offices of banks which are Zanaco Bank, Building Society, ABSA Bank, Atlas Mara Bank, Indo Zambia Bank, Stanbic Bank, Bank ABC, First National Bank, Invest Trust Bank and Natsave Bank, and more than three insurance companies.

This is an indication that there are adequate financial services being offered in the district. However, it can be noted that all the financial institutions are located in the Central Business District. Therefore, the residents need to travel a long distance to access these services.

Moreover, the availability of financial institutions has made it possible for women in the district to access credit for investments in business. In addition, the provision of mobile money services such as ZAMTEL money, MTN money, AIRTEL money, ZOONA and KAZANG has made it easy for people to access financial services especially those in the informal sector and the rural parts of the district. Figure XX provides information on existing Financial Institutions in Kabwe District.

Figure 27: Existing Financial Institutions in the District

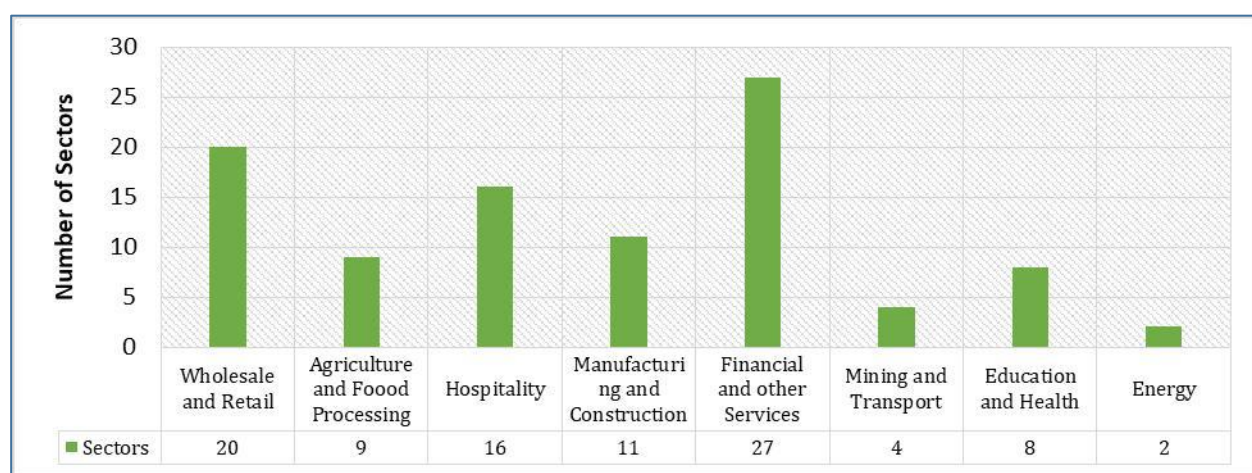

KMC: 2022

3.3.2.3 Sectors Registered with KCCI as at 2019

Figure 44 shows various business entities registered with the Kabwe Chamber of Commerce and Industry⁴. The largest number of affiliates being Financial and Other services, followed by retail and hospitality sectors respectively.

Figure 28: Sectors affiliated to KCCI, 2019

KCCI, 2019

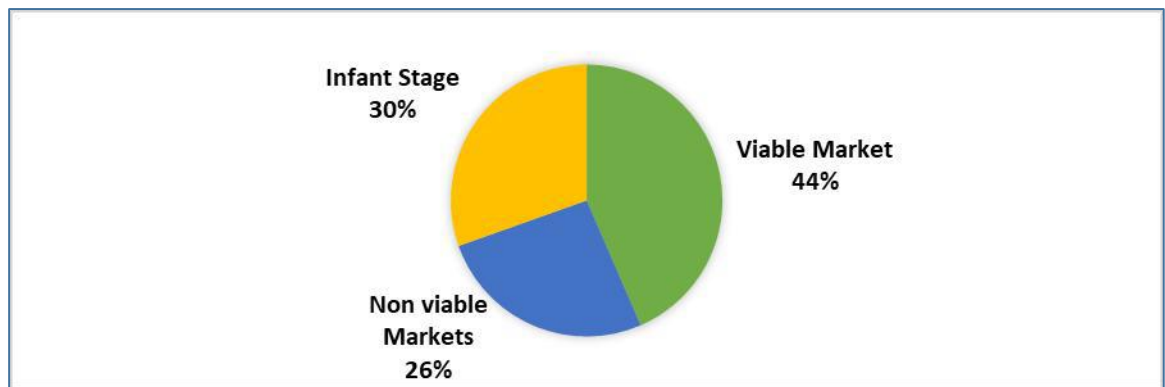

3.3.2.1 Markets Analysis

It is a well-established true that, Markets enhance the local economic development of any district. This is because Markets provide employment opportunities for the informal sector. In Zambia, the Markets and Bus Stations Act Number 7 of 2007 empowers Local Authorities to establish, manage and control markets in their jurisdiction. Supported by this Act, Kabwe district currently has 23 existing markets. Of the 23 markets, 10 are said to viable while 13 are at development stage.

In terms of infrastructure, the markets are characterised by lack of modern infrastructure which includes lack of modern shelter, toilets, drainages. As a result, traders find it very difficult to conduct their businesses during the rainy season.

⁴ Kabwe Chamber of Commerce and Industry, 2019

Figure 29: Status of Markets

KMC, 2022

Additionally, the district has three (3) shopping malls namely Kabwe Mall, Coronation Park and Mukuyu Mall owned and operated by private investors. The three (2) shopping mall host chain stores such as Shoprite, and Choppies. However, the three shopping malls are located within the Kabwe town, therefore people from rural areas need to travel long distances to do their shopping.

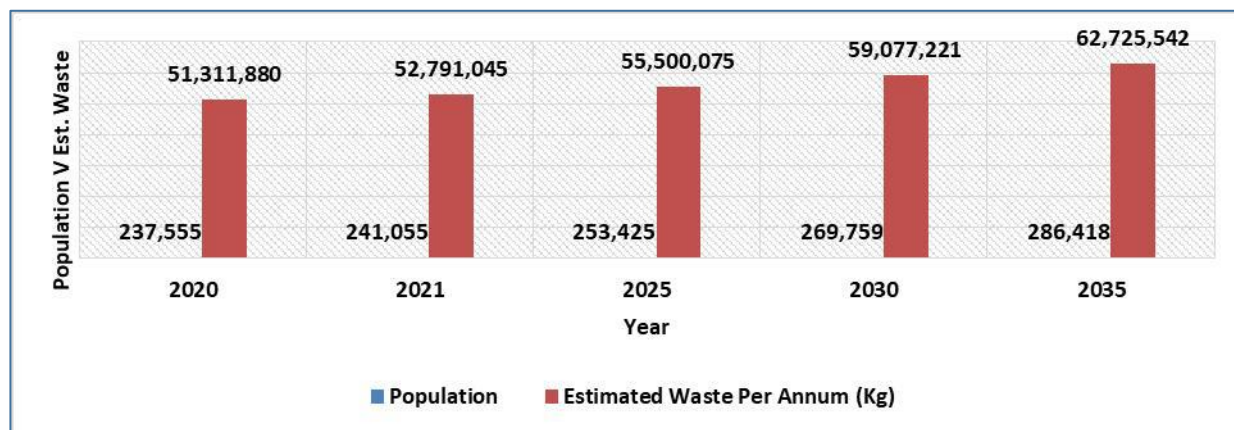

3.3.3 Environment and Climate Change Analysis

Lead and zinc mining operations in Kabwe, ceased in 1994. However, the toxic waste/dump from almost a century of mining is still causing illness and death to many residents who unknowingly were exposed to poisonous waste over time. These mining, industry and agriculture activities have affected the aesthetics of the district. Estimates show that, 51,311,880 Kg of waste was generated in 2020

⁵ Luka Powanga (2021) Economic Development, at What Cost: The Case of Kabwe, Zambia. J Bioremediat Biodegrad 12: 006. DOI: 10.4172/2155-6199.1000006.

and in 2035 the district is expected to generate around 62,725,542 Kg of waste. Increase in waste generation has been necessitated by increased market, CBD businesses, street and industrial activities.

Figure 30: Estimated Waste Generation per Year, 2020-2035

KMC, 2022

3.3.4 Issues Relating to Gender Groups and Vulnerable Groups

It is important to highlight that, most of the women in the district are in the informal sector. Therefore, the presence of markets and commercial facilities has created conducive environment for them to conduct business. Consequently, they can earn an income which helps poverty alleviation at the household level. The erratic water supply and the bad condition of sanitation services pose a threat on women health.

3.3.5 Issues Arising from the Public Consultations

During the public participation process the community highlighted the following challenges; high poverty levels, inadequate markets and deplorable infrastructure, poor water supply and sanitation in markets, increase in street vending, high unemployment levels, limited access to financial institutions and credit services, high cost of doing business, inadequate industries, lack of a modern bus station and an airport.

3.3.6 Summary and Consideration of Underlying Issues

The District's Economically Activity Population years is expected to grow from 118,929 in 2011 to 176,239 in 2035. This growth in population entails more productivity in the district's economy. On the other hand, this change will lead to increased demand for jobs. Moreover, the district remains a preferred investment destination

because of this readily available labour force.

A summary of core issues highlighted have been summarized in the table below:

S/N	Core Issue	Affected Ward/ Area
1	Inadequate market infrastructure	Zambezi, Ngungu, Kawama (Zambani area), Chililalila, Muwowo West (Chikupwi zone), Muwowo East (No man's land between ZCS and K Mulonga small holding), Justin Kabwe, Katondo, Lukanga, Munga, Mpima, Kalonga (Makwati and Kakumbi), Highridge
2	Poor water supply and sanitation in markets	- Pollen, Njanji, Kachulu, Kamushanga (1), Mukobeko (1), Kasanda (1), Mine(1), Green Market 2 in 2023, 2 in 2024, (2) in 2025, (1) in 2026, (1) in 2027
3	Limited access to financial institutions and credit services	All wards
4	Limited youths with skills to enable entrepreneurship	All wards
5	High cost of doing business	All wards
6	Inadequate industries	All wards

3.4 Tourism

3.4.1 Key Government Priorities Being and To Be Implemented at A Local Level

Tourism is one of the sectors that has potential to improve the economic aspect of the district. However, the industry is not developed despite the presence of tourism attractions such as, the Broken Hill man Site where the Skull was discovered in 1921 in Mine area. The Broken Hill man skull is in the natural museum in the UK. The site needed to be fenced so that it is preserved. Furthermore, the mine museum has not been functional and the Kasavasa paintings have not been promoted. The sector continues to face challenges which include: undeveloped tourism- related infrastructure, limited investment in the tourism sector, inadequate tourism promotion and marketing; low participation by locals in direct and indirect tourism development. Under this Plan, Kabwe will intensify the development of the tourism sector using the following strategies

- i. Tourism products promotion;
- ii. Music and Arts festivals development promotion;
- iii. Tourism investment promotion
- iv. Tourism-related infrastructure development

3.4.2 Description of the Existing State of Development

Kabwe has huge tourism potential due to its central location and presence of numerous tourist attractions across the district. The following discussion focuses on the tourist sites the district is endowed with that can be promoted in order to promote local economic development

3.4.2.1 Lukanga Swamp

Lukanga Swamp is a permanently swampy area located 50Km west of Kabwe district. The area is endowed with wildlife though road access is very poor. It covers an area of about 2600 Km²(Ramsar, 2006), and supports the population directly or indirectly dependent through the provision of fish, agricultural produce, livestock grazing fuel wood and charcoal (ibid). It also forms an important part of cultural identities of the Lenje, the main tribe inhabiting a large area in the east of the catchment. To the Lenje the Lukanga swamps are important as a rain shrine and as a venue for traditional ceremonies such as Kulamba Kubwalo; a thanksgiving ceremony held at the end of the harvest (Mapedza et al 2008). The area can be a significant tourist attraction with species of birds endemic only to the District. The swamp area is also suitable for the location of aqua-marine based recreation activities such as sport fishing and boat cruises. However very little has been published on the Lukanga swamps in literature and there are no management

strategies in place to aid conservation in the area.

3.4.2.1 Timothy Ashworth Game Ranch

Timothy Ashworth Game Ranch locally known as CMR was established in 1992, it is located along Lukanga swamp road. It is stocked with various wildlife such as; eland, sable, roan, Kudu, hartebeest, giraffe, water buck and Zebra. CMR game ranch also partners with Kabwe Chongololo club so that school children can view the wildlife. Game viewing is also open to the public. Game ranching and investment in wildlife industry will encourage more tourists to visit Kabwe.

Figure 31: Timothy Ashworth Game Ranch (CMR)

3.4.2.2 Mukasa Agro solutions

Mukasa Agrosolutons fish farm is a private Zambian owned business enterprise specialised in breeding of tilapia fingerlings. It's located at Mulungushi river about 4km off Mukonchi road along Mulungushi River, 800m from St. Paul' High School. The campsite has a variety of services that offer out door camping, boat cruising and braai and fishing tours of Mulungushi River.

3.4.2.3 Broken Hill Man

The district has a historical significance in the evolution of man in that historical evidence shows that Kabwe is the place where the skull of the primeval man was discovered during the mining activities in the late 1800s and 1900s. The skull according to historians was discovered in June 1921 by a Swiss miner named Tom Zwigelaar and an unnamed African miner, working at Broken Hill Mine (Puech et al 1980). The area was known by the local people as *Mutwe wa Nsofu* or head of an elephant (KMC, 2016). The replica of the Broken Hill Man and the Bust has been installed and mounted on the Broken Hill Man monument at the Civic Center, drawing people from various backgrounds to view these replicas and thereby boosting local tourism. The monument's plaque is inscribed in both English and Bemba. The inscription recounts the discovery on April 17, 1921, during mining operations at No.1 Kopje Broken Hill, of one of the most fossilized human skulls.

The inscription on the monument states that" *The monument commemorates the discovery on June, 17th April, 1921 during mining operations at No.1 Kopje Broken Hill one of the most fossil human skull. This skull which was discovered by T. Zwigellar a Swiss miner belongs to an archaic human type known as Homo Rhodensiensis or Broken Hill man who probably lived some 40, 000 years ago.*" Unearthed by Swiss miner T. Zwigellar, the skull belongs to an archaic human type known as Homo Rhodensiensis or Broken Hill Man, estimated to have lived around 40,000 years ago. Best viewed from the accessible sidewalk in front of the Civic Center, the monument signifies the historical importance of Kabwe in the evolution of man. Historical evidence points to Kabwe as the place where the skull of the primeval man was discovered in the late 1800s and 1900s during mining activities. The skull, also known as Homo heidelbergensis, was found in June 1921 by Swiss miner Tom Zwigelaar and an unnamed African miner at Broken Hill Mine. Despite global attention and recognition for depicting the evolution of man, the current state of the archaeological site doesn't reflect its historical significance. To preserve and showcase this important site, efforts should be made to secure, develop, and market it as a tourist attraction, gaining both local and international recognition.

Figure 32: Broken Hill Man Skull and replica installed at the Civic Centre

Figure 33: Broken Hill Man site

3.4.2.5 Broken Hill Mine

The historical importance of Broken Hill Mine, the earliest large mine in Northern Rhodesia (modern day Zambia), has been insufficiently documented. Despite its role as the first consortium mine, named the Broken Hill Development Company, following the mineral discovery by T.G. Davey in 1903, the mine's contribution to regional mining history is underrepresented (Fundi 2015). Davey stumbled upon rich lead and zinc deposits while searching for copper, leading to the naming of the area Broken Hill, akin to the Australian town. Until 1967, the town was known as Broken Hill before reverting to the original name, Kabwe. The mine played a pivotal role in attracting foreign mining interests, fostering town development, and establishing the region's first railway after sinking for high-grade zinc, vanadium, and lead extraction. Kabwe, with its locomotive sheds, marshalling yards, and administrative headquarters, became a hub for Central African Road Services (CARS), serving as the gateway to East Africa. The mine's history is intertwined with the Industrial and Mineral Revolutions in Britain and South Africa, respectively, indirectly contributing to Africa's supply of raw materials during these transformative periods (Fundi, 2015). As the oldest town in the country, Kabwe underwent various transformations, evolving from a

village in 1915 to a township in 1930 and eventually becoming the first municipality in 1954, with Mr. A.G Easton as the inaugural mayor. Given its historical significance, it is crucial to safeguard and promote Broken Hill Mine as a tourist attraction.

3.4.2.6 Mukuyu Tree

The Big Tree locally known as the Mukuyu tree plays a significant role in the history and cultural heritage of the district. This is a fig tree with branches spread outwards creating a unique green canopy measuring over 50 metres standing tall in the middle of the Central Business District along Freedom Way. The Big Tree is listed as one of the important heritage sites in Zambia and was declared a national monument because of its historic significance (Ng'uni, 2017). The tree in pre-civilization time served as an assembly area for donkeys and caravans and also as a resting place for slaves and traders.

The tree also played a significant role in the early history of the town. The tree's historical significance has not only attracted attention from the local community but institutions such as World Bank. The Big Tree is one of the symbols on the emblem of Kabwe Municipal Council (KMC, 2018). The Bank of Zambia (BoZ) in 2002 also recognised the historic significance of the tree and depicted it on the K50 banknotes.

To preserve and maintain the site, the Bank of Zambia spent funds amounting to K370,000 (Kalalya 2018). A steel fence was constructed around the site and chairs and tables within the fence were erected. However, this tree is currently a hive of business activities and can be easily mistaken for a market. The Mukuyu tree was launched as an exhibitions center on 28th August 2022, this was with a view to create market for Kabwe artists in order for them to sell their artifacts. However, it's been difficult for artists to move on the site due to the vendors that have been selling in front of the tree. The situation has been brought to the attention of the mayor who will help in removing the vendors.

Figure 34: Mukuyu Tree

3.4.2.3.4 Cultural Heritage

The district has a diverse cultural background owing to the various ethnic groupings represented in the district. The Department of Arts Culture coordinates arts, cultural industry (Sculpture, carving, basketry, ceramics, fashion and designs, jewelry) and music to preserve our cultural heritage. Shown below are Sites for the tourist attractions in the district.

Figure 35: Kabwe Cultural Carnival

Figure 36: Mwenge Ceramics produced in Kabwe products made by Chinko Creations in Kabwe

3.4.2.3.5 Mulungushi Dam

The Mulungushi Dam which is located south-east of Kabwe also has a historical background, it was a man-made lake that was created on the Mulungushi River in 1925 by the Broken Hill Company and it was opened in 1925 by the Prince of Wales to provide hydroelectric power to the Broken Hill Mine then which is now Kabwe.

The dam is 20km long and 2-3Km wide and it is home to the Mulungushi Boat club. The dam is remarkable for its attractive on-site activities such as bar, rock climbing, cliff, hiking and biking trails. The dam also offers Camping, Boating, Fishing, Swimming with an unobstructed view over the dam. Other scenic beauties of the dam are the natural water fall, caves and incredible rock formation. One can also take a walk along the gates of the dam wall which looks spectacular. The dam has a unique historical heritage as it was commissioned by the Prince of Wales in 1925 and Mulungushi river area where the dam is sited was a training camp for Zimbabwe's Revolutionary Army.

3.4.2.3.6 House Number E1376 Bwacha House

Kabwe is considered as the birth place of Zambian politics and an important political centre during the colonial rule. Kabwe is also regarded as the cradle of Zambia's independence as crucial decisions leading to independence in 1964 were made here (Mufinda 2015). Dr Kaunda was on March 8, 1958 elected as the president of Zambia National Congress (ZANC) at House Number E 1376 in Kabwe's Bwacha Township. It is however, reported that the Kabwe Municipal Council allowed ordinary occupancy of the monument. The house because of significant historical background can be preserved as a political heritage, properly secured as a tourist attraction.

3.4.2.3.7 Mita Hills

Mita Hills are located east of Kabwe district it is an embankment dam with a hydroelectric power station and man-made lake. Very few people know about the existence of the dam due to its poor road accessibility. The dam could be a prime hotspot for tourism attraction if exploited and marketed. The area has potential for onsite activities such as fishing, camping and hiking among other activities.

3.4.2.3.8 Availability of Services

Community representatives during the community meeting indicated that the district has tourism potential except that the road network to the Mukasa fish camp is in bad condition.

3.4.2.3.9 Quality of Service Including Key Indicators of Performance

Since its creation, however the district has not performed in developing the tourism industry despite it being a key sector for wealth creation. The poor performance of the arts and tourism sector in **the** district can mainly be attributed to;

- i. Low domestic tourism largely due to inadequate marketing of tourist products
- ii. Uncoordinated development in the sector
- iii. Low level of development of support infrastructure such as tourist sites
- iv. Inability to enforce standards due to the outdated cultural policies and laws used to regulate the sector such as the National Cultural policy of 2003, National Arts Council (NAC) of Zambia Act NO. 31 of 1994 and National Museum Act of 1996 respectively.

Further the Department of Arts and Culture in the district faces several challenges including poor funding and lack of transport which incapacitates it from undertaking a number of activities aimed at promoting tourism and arts in the tourism district.

3.4.3 Impact of Changes Anticipated Over the Next Ten Years

3.4.3.3 Population Change – Future Demand for Services and Facilities

The population of the district is expected to grow from 299,206 in 2022 to 456,325 in 2035 which can be seen as an opportunity for the tourism sector. However, attributing to the fact that there has been inadequate marketing of tourist products, low level of development of support infrastructure for Arts, Culture and tourism, low funding levels it is anticipated that the sector will not do fine, unless the challenges highlighted are taken into consideration as an increase in population should be seen as a great opportunity for the sector to thrive.

Though Kabwe District has been perceived as a non-tourist destination, the district has a rich historical heritage that can provide an opportune environment for the tourism sector to thrive. It is further advantaged by its central location and its close proximity to Kenneth Kaunda International Airport in Lusaka and Simon Mwansa Kapwepwe International Airport in Ndola. It further has potential tourist attraction sites that can enhance the tourism sector and contribute to economic development of the area.

3.4.4 Existing and Proposed Investment and Development Programmes

In order to enhance the competitiveness of tourism in Kabwe, there is need for investment by constructing cultural and arts infrastructure facility. The private sector can therefore consider investing in the Tourism

3.4.4 Summary of the Sector

Tourism is an important contributor to national development and cardinal to economic diversification. Tourist attractions are at the core of tourism. Though the importance of tourism has been increasing much of the tourist potential attractions have not been exploited. The PSIR has shown that Kabwe has a major opportunity to harness the potential of tourism in order to foster development of the district. However, the situation analysis has indicated that tourism in the district has not received much attention, it is therefore important that the sector is placed as a priority in the district.

This would entail that funds are allocated to refurbish and market the tourist attraction sites in the district. Funds should also be allocated for the construction of a Museum where various artefacts could be kept and would guarantee that 'Broken Hill Man' skull would have a place to rest if it were brought back to Zambia. It would also entail promoting marketing tools that would create awareness of tourist attractions in the district.

The table below shows a summary of core issues that were raised during the public consultation process;

S/N	Core issue	Wards Affected/Location
1	Inadequate developed tourism-related infrastructure	Bwacha (Venus theatres), Kangomba (Mutwewasnsufu, Broken Hill discovery site), Mukuyu tree (town centre), Kasavasa (stone age paintings)
2	Limited investment in the tourism sector	All wards
3	Low participation by locals in direct and indirect tourism development	All wards

3.5 Transport and Communication

3.5.1 Key Government Priority Being and to be implemented at a Local Level

A good transport network is critical to creating an enabling environment for economic transformation and job creation. The social and economic benefits that emanate from a good transport network system make it an important factor for

poverty and vulnerability reduction. Kabwe District's central location promotes interconnectivity in terms of road and railway transport. Therefore, Kabwe District will promote a robust and competitive transport network that will service not only the district but the nation in line with the aspirations of the National Vision 2030 and SDG No.11.

Key priority areas that will be implemented with regard to transport infrastructure in the district include;

- i) Dualling of Great North Road
- ii) Construction of a bypass
- iii) Road infrastructure construction, upgrading and rehabilitation
- iv) safety enhancement
- v) Completion of Lukanga Bus Station

3.5.1.2 Description of the Existing State of Development

3.5.1.2.1 Availability of Service Including Key Indicators of Performance

The district generally has a fairly good road network linked to all places of social and economic importance and accommodates all types of vehicles. The railway line passes through the district from the southern part of the country to the north and mostly carries bulky cargo.

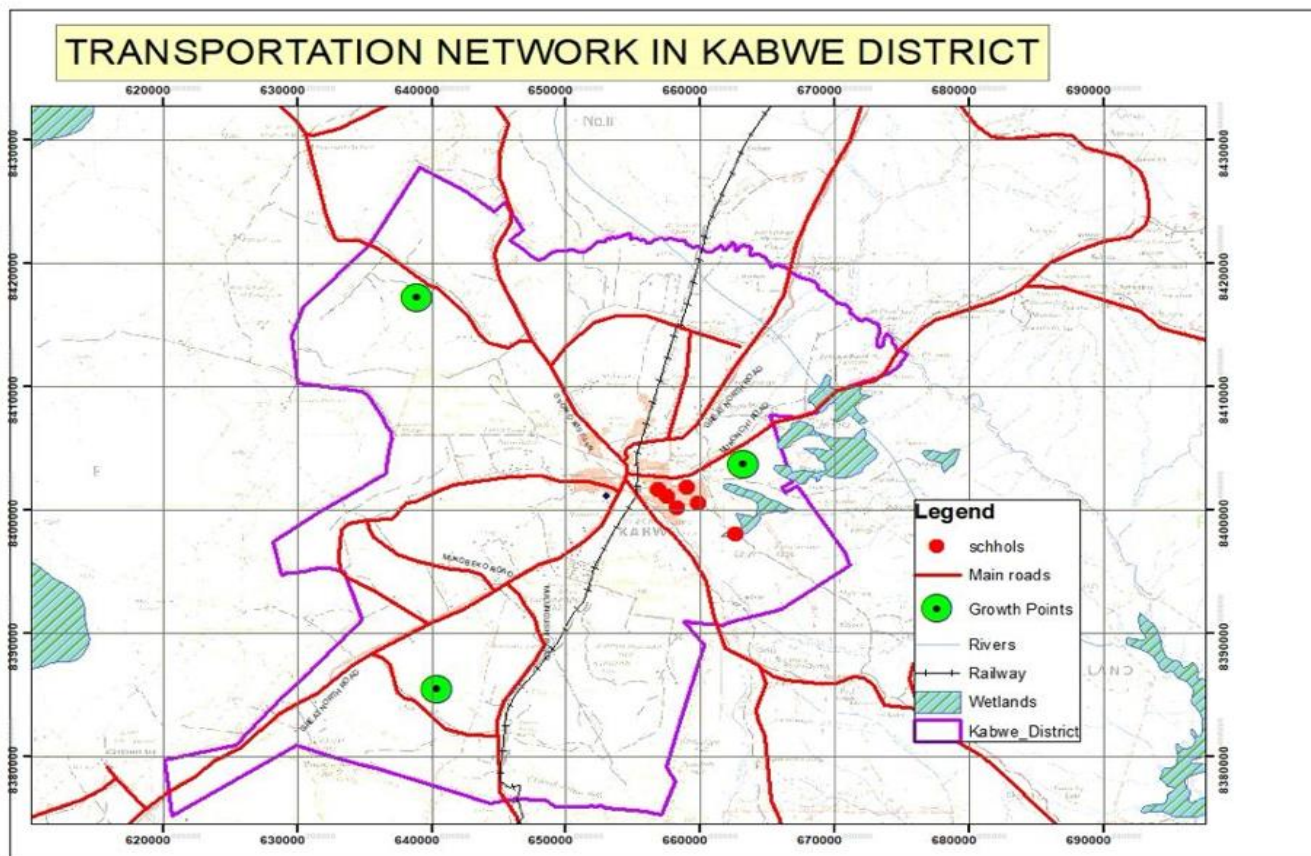

The district has one intra bus station with a carrying capacity of 180 mini buses run by the Local Authority and one that is privately owned. The district has two bus stops that are privately owned. Currently the district is constructing a transit bus station which will spur other economic activities within the vicinity of the facility. Although public transport is abundant the district faces inadequate bus shelters and sidings and where they exist, they have been vandalised. This lack of sidings in some areas has caused some accidents as bus operators have no option but to stop on the road when loading.

Milikan (Chililalila) situated west of the district about 3km from town centre is the only airfield in the district and is currently not in a good condition. This Airstrip could be used as a convenient stop-over point for tourists if tourism in the district is opened up.

A rail line passes through the district from the southern part of the country to the north which enables the district to transport goods in bulk to and from the district.

The figure below shows the existing transport network in the district.

Figure 37: Existing Transport Network in Kabwe

Source: KMC, 2022

3.5.1.2.2 Un-gazetted and Community Roads

The district has numerous un-gazetted and community roads which are generally in a very bad state due to lack of maintenance. The current policy of the government, classifies these as feeder roads under the custody of the Local Authority. To address the problem of poor maintenance of feeder roads and to instill a sense of ownership, the Local Authority envisages engaging local communities using the labour-based approach.

3.5.1.2.3 Road Sector Investment Program (ROADSIP) I & II

The Roads Department through ROADSIP I embarked on emergency repair and

reconstruction works on T2 road which is an important road that opens up the country to neighbouring countries and used mainly for transportation of goods. The Roads Department under phase II of the program will embark on the repair of the main district and feeder roads. The table below provides an inventory of the roads under the supervision of the Roads Department.

Table 14: Inventory of Roads under the supervision of the Road Department

Road No/Name	Length (KM)	Condition	Bridge	Comments
T2 Great North Road	40	The stretch to Lusaka is good and the one towards Kapiri Mposhi is being worked on by a contractor	Mulungushi	A lot of opportunities exist since this is an international route. By working on the road this will minimise constraints.
D191 T2-Kasavasa	57.6	This road is in a fair condition because it was graded during the first phase of hipc programme. However, some stretches require regravelling to make it passable during the rainy season.	Momboshi	Used mostly by farmers for transportation of farm inputs and produce
D194-Makululu Lukanga Swamps	30	Due to lack of maintenance over the past few years, the road has deteriorated by having gullies, potholes and depressions including the general loss of shape.	Nil	The road leads to fishing areas on the Lukanga swamps. Its condition has constrained the transportation of fish to markets in town.
D- 195 Kasanda Grounds-Mukobeko prison	16.6	From T2 junction to Kabwe G. Hospital it is good, but thereafter it is potholed and at some point it was ripped and exist in gravel form up to the end	Nil	After some patching was done and the worst part was ripped, some traffic increased up to the prison and beyond. Complaints came from mostly farmers who found it difficult to transport inputs.
D- 196 kabwe – Natuseko	6.8	Due to lack of attention over the years the road has become very bad.	Nil	Very few vehicles using the road due to its bad condition.

Road No/Name	Length (KM)	Condition	Bridge	Comments
D197 kabwe G. Hospital Bwacha Township	1.6	Due to bad timing of the HIPC programme when the road was graded, there was very little improvement and still requires attention.	Nil	With the slight improvement, traffic increase because it is the shorted rout to the hospital from Bwacha Chimanimani and Ngungu townships.
D 200 kabwe – Mukonchi	40	This road was recently worked on by a contractor and it is in good condition	Mulungushi	To keep traffic flowing at the current rate, there is need to put in place a maintenance programme to ensure that the road is kept in a good state, otherwise the whole investment would go to waste.
D 421 Kabwe Mulungushi Dam	53.9	Lunsemfway Hydro-Power company recently engaged Zambia National Services to work on the road and it is in good condition.	Nil	The road is used by both the power company and farmers
D 623 D195-D196	12.1	Though it is in a fair condition, it still requires some attention	Nil	

Source: Roads Department Kabwe

3.5.3 Issues Arising from the Public Participation Process

The public participation process revealed that the transport network was generally poor in all the wards in the district and some areas where inaccessible during the rainy season particularly in the peri-urban and rural parts of the district such as Muwowo East and West, Chinyanja, Chankalamo. The economic main stay of these areas is agriculture and lack of access to road network impinges the timely transportation of their farm produce to the markets.

3.5.4 Impact of changes anticipated over the next ten years

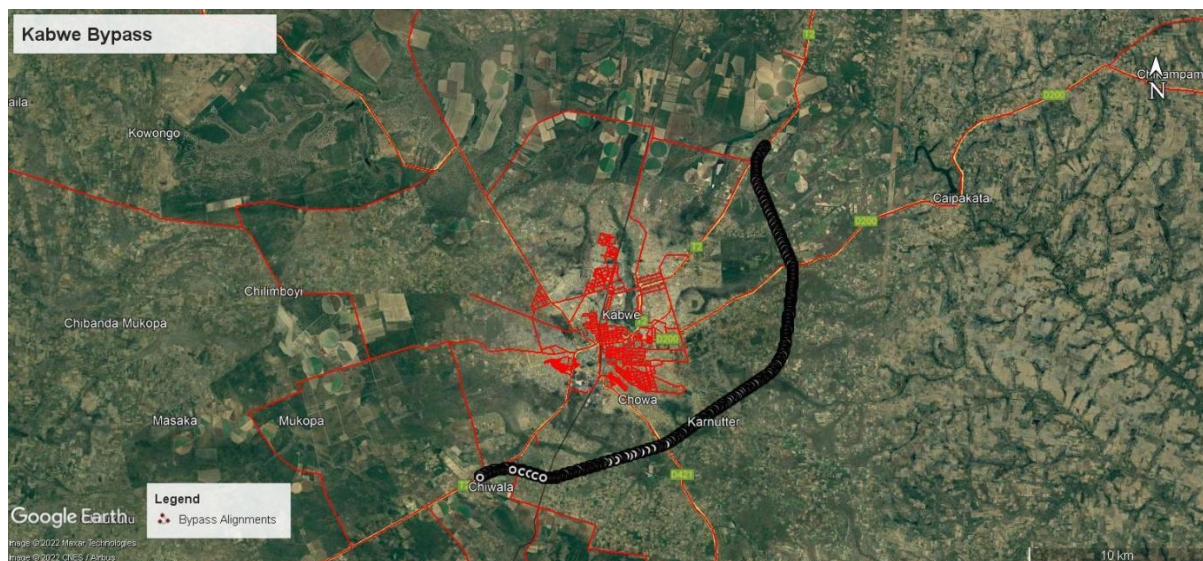

3.5.4.1 Existing and Proposed Investment and Development Programs

The Government through the Road Development Agency intends to transform the T2 Road (Great North Road) from Lusaka to Kapiri Mposhi, and the T3 Road from

Kapiri Mposhi to Ndola, into a dual carriageway to ease the movement of vehicles such as trucks, buses, and motor vehicles and to reduce on accidents. The proposed construction of a dual carriage way will require a bypasses around the towns of Kabwe and Kapiri Mposhi that will serve as an economic road for farmers and mining activities and reduce on traffic congestion in the Central Business District.

The figure below shows the proposed by pass for the district.

Figure 38: Proposed By Pass

Source: Road Development Agency

3.5.4.1.2 Population change future demand for services and facilities

The projected population growth highlighted in the demographic analysis from 299,206 in 2022 to 456,325 in 2035 entails a demand on the transport sector. The growth in demand for goods and services may create conflicting interests with regard to transport infrastructure among various users such as the public transport operators, pedestrians, vendors and developers, resulting in limited space for transport infrastructure expansion. Therefore, the growing population will require investment in functional and effective transport systems for easy movements and ferrying of people, goods and services.

3.5.4.1.3 Impact of the Continuation of existing trends on population and settlements

The settlement pattern distribution of the district denotes that development is concentrated in the urban part of the district due to a good transport network system that allows for easy mobility and easy access to goods and services. The continued growth in the urban population will lead to further increase in demand for limited urban services and increased congestion in the Central Business District.

3.5.4 The Impact of Existing Trends on the Environment and Climate Change

Transportation contributes to air pollution due to emissions from combustion of fossil fuels, noise and water pollution which affects the ecosystem. The anticipated population growth and increase in vehicular traffic may contribute to environmental degradation due to emission of pollutants and clearing of land for investment resulting into loss of biodiversity. It is therefore imperative that investment is made in sustainable transport infrastructure.

3.5.5 Issues Relating to Gender and vulnerable groups

The poor road network in the District particularly in the rural areas such as Chinyanja, Munyama, Muwowo East and West affects largely women and children in the school going age range. The district's distribution of small-scale farmers shows that women account for 52.6 percent of smallholder farmers in the district, therefore a poor road network entails limited access to good market for their farm produce which may increase the poverty and vulnerability levels of women headed households. The district poverty analysis showed a high prevalence rate in early child hood marriages in the aforesaid rural parts of the district for instance Chinyanaja recorded 34% rate. This could partly be attributed to long hours of walking due to bad roads which are usually impassable in the rainy seasons and exposes young girls to vulnerability.

3.5.6 Summary and consideration of underlying issues

The transport sector is critical to the development of the District, however it is faced with challenges of poor road infrastructure which is more prevalent in rural areas of the district. Though investments have been made in transport infrastructure, it has been inadequate to address the challenges highlighted. The anticipated population growth of poses a challenge on the transport system in the district in terms of road expansion and the ecosystem.

The table below shows a summary of the core issues raised during the public

participation process.

S/N	Key issue	Wards/LocationAffected
1	Poor transport (road, rail and air) network	• All wards • Chililalila (Airstrip)
2	Limited access to Air transport	• All wards
3	Lack of a modern intercity bus terminus	• Lukanga Ward

3.6 Information and Communication Technology (ICT)

3.6.4 Key Government Priorities Being and to Be Implemented at A Local Level

Information and Communication Technology is cardinal to fostering sustainable development of the district. It enables citizens to exercise their voice to effectively monitor and hold government to account and to enter into informed dialogue about decisions which affect their lives. Currently the Government in collaboration with SMART Zambia has embarked on a robust program on integrated information management systems where Government departments are connected to Government Wide Area Network (GWAN) in order to enhance service delivery.

3.6.5 Description of the Existing State of Development

3.6.2.1.1 Availability and quality of Service

3.6.2.1.1 Telecommunication

Communication in the district is easy with the availability of land telephone services provided by Zambia Telecommunications Company (ZAMTEL) and mobile phone service providers namely Airtel and MTN Networks. Zamtel has also started to offer GSM mobile phone facilities. The Kabwe Exchange was recently installed from the old NXIE to NEAX 61E digital exchange. The exchange has abundant lines that are underutilized. The new exchange however needs to be matched with a new cable network to achieve optimum efficiency. According to the KDIP (2022) the mobile network coverage for the district is at 98.97%. However, some rural parts of the district such as Muwowo East, West and Chinayanja are faced with challenges of poor mobile network coverage.

The table below shows the capacity and availability of telephone lines.

Table 15: Capacity and Availability of Telephone Lines

Area	Exchange Capacity	Working Lines	Spare Lines
Kabwe	4,500	2606	1,894
CDMA	NEAX 300	30	270
WLL			

Source: Zambia Telecommunications Limited

The District also has Internet cafés and notable of these are Slice Technologies situated at Chitanda House on Freedom Way and Easy Dot Com on Marshall

Avenue. Apart from being the backbone of telecommunication in the Nation and the district, ZAMTEL also offers internet services through a dial up method. Unlike other Internet Service Providers charges for calls to Zamtel servers are treated as local calls and billed accordingly.

3.6.5.1.3 Radio

Radio reception in the district is good with four community radio stations namely KNC, Radio Maranatha, Power FM and Cloud FM which have coverage for the whole district. Other available stations on FM include:

- i. Radio One of Zambia National Broadcasting Corporation
- ii. Radio Two of Zambia National Broadcasting Corporation
- iii. Radio Four of Zambia National Broadcasting Corporation
- iv. Radio Phoenix (Private)
- v. British Broadcasting Corporation (BBC)

3.6.5.1.4 Television

It is possible to view Zambian TV broadcasts and the Christian channel Trinity Broadcasting Network (TBN) in the district. Apart from relaying religious broadcasts from the main station in the USA, TBN also shows programs on local social and economic issues.

Satellite TV can also be viewed in the district. More information on this can be obtained from Perth LTD an agent for Multichoice, which is the only provider of pay TV in Zambia.

3.6.3 Issues Arising from the Public Participation Process

During the public stakeholder consultation it was revealed that communities in the rural areas of the district were faced with challenges of limited access to ICT, this was more prevalent in Muwowo East. Though the district was faring well with regard to mobile network coverage, ICT infrastructure was a challenge in schools situated in the peri- urban and rural areas of the district.

3.6.4 Summary and consideration of underlying issues

Kabwe being a predominantly urban area, is privileged with good ICT coverage, however some rural parts of the district have poor ICT coverage which poses a challenge with regard to communication. Therefore, proposed investments in ICT should focus on improving access to ICT in these areas in order to foster inclusive

development.

3.7 ENERGY

3.7.4 Key Government Priorities Being and To Be Implemented at a Local Level

The use of energy is strongly related to all facets of life and it is considered as one of the key drivers to economic growth and development. The Kabwe IDP will focus on ensuring access to affordable, reliable and sustainable energy by all in the district in line with SDG no. 7. Currently the IDP area has seven (7) Filling stations namely; Petrochem (1), Total (1), Mobile (1), Engine (1), Mount Meru (1) and Puma (2). The Government through ZESCO intends to increase electricity transmission and distribution in the district ZESCO has embarked on the construction and upgrading of power substations. ZESCO has further embarked on energy efficiency promotion programs.

3.7.5 Description of the Existing State of Development

3.7.5.1 Electricity

Access to electricity is an important factor in fostering socio economic development in the district. The district is connected to the National power grid ZESCO and Lunsemfwa Hydro power station. However, access to electricity in the peri urban and rural parts of the district is still a challenge. According to LCM only 52.3% of households were connected to electricity in the district compared to the national average of 31.4 percent. The table below shows the proportion of households without access to electricity.

Table 9: Proportion of Households without access to electricity

Constituency Name	Ward Name	Population	Number of Households	Percent With out Electricity
BWACHA	BEN KAPUFI	4,977	1,159	75.5
BWACHA	BWACHA	9,567	1,773	32.7
BWACHA	CHILILALILA	12,079	2,584	94.6
BWACHA	CHIMANIMANI	4,691	867	15.3
BWACHA	CHINYANJA	1,321	285	90.5
BWACHA	KANG'OMBA	5,947	1,102	93.4
BWACHA	KAWAMA	10,103	2,085	82.2
BWACHA	MAKULULU	10,447	2,158	91.8
BWACHA	MUNGA	3,344	705	52.9
BWACHA	MUNYAMA	3,540	680	80.4

BWACHA	MUWOWO EAST	3,235	670	52.4
BWACHA	MUWOWO WEST	1,953	392	86.5
BWACHA	NGUNGU	6,068	1,251	21.1
BWACHA	ZAMBEZI	3,785	757	96.2

Source: ZAMSTAT, 20222

An analysis by ward shows that over 90% of the households in Chililalila, Chinyanja, Kan'gomba, Makululu and Zambezi did not have access to electricity whereas only Bwacha, Chimanmani and Ngungu showed below 30% of households without access to electricity. The high percentage number of household without access to electricity denotes heavy reliance on unsustainable sources of energy such as charcoal and firewood which contributes to environmental degradation.

3.7.6 Issues Arising from The Public Participation Process

Submissions from the Public participation process showed that rural and peri urban wards such as Chinyanja, Muwowo East and West, Mpima, Zambezi and Luansanse were not connected to the power grid and that the community relied on firewood and charcoal which was detrimental to the environment. Limited access to electricity denoted reliance on natural resources such as firewood for energy consumption by the community. It was also revealed by the community members that women and children were more affected by lack of access to electricity as they had to walk long distances to fetch firewood.

3.7.7 Impact of Changes Anticipated Over the Next Ten Years

3.7.7.1 Population Change – Future Demand for Services and Facilities

The projected population growth for Kabwe district shows an increase in population density from 151Km² in 2020 to 183Km² in 2035. It is also anticipated that much of the population growth will be absorbed by the urban population. This change will present demand on the energy sector to meet the needs of the growing population, for instance it is anticipated under the education sector that 1000 classroom blocks will be built, housing units and other infrastructure developments will require connection to the power grid. The current deficit in electricity will likely promote the cutting down of trees for charcoal production and firewood which contributes to environmental degradation and global warming. With the current and anticipated electricity demands may lead to power outages which may adversely affect the health facilities in parts of the district that entirely depend on hydropower and the informal sector that largely contributes to employment creation in the district. The anticipated population growth and dependence on electricity will require strategic interventions to promote sustainable use of energy and also investments in renewable energy.

3.7.7.2 *The Impact of the Continuation of Existing Trends on Land Use and Population Distribution Patterns*

The expected population growth will be absorbed by the informal settlements which will account for 70% of the urban population settlements due to increased demand for land for housing development which the Local Authority may fail to meet. The population growth distribution pattern of the district can be attributed to availability of services in the urban areas such as electricity which promotes an influx of people from the peripheral to the core of the district. It is anticipated that this distribution pattern will continue due to the disparities in service provision such as electricity between the urban and rural areas of the district.

3.7.8 The Impact of Environmental and Climate Change Issues on the Sector

The continued deprivation of access to electricity in the peri urban and rural areas of the district will continue to promote deforestation due to the need for firewood and charcoal for energy consumption. Though currently only 52.3% of the district's population is connected to the national grid, it is expected that there will be a surge in demand for energy due to population growth. Currently the high dependence on electricity has contributed erratic power supply. This has contributed to environmental degradation due to cutting of trees for charcoal production.

3.7.9 Issues Arising Relating to Gender Groups and Vulnerable Groups

Lack of access to modern energy has a strong impact on women and children's health in the IDP area. Women are commonly responsible for ensuring the daily energy supply for cooking and heating. Women will spend more time on collecting firewood than on other sustainable livelihood activities. The time that Children may spend in collecting firewood would deprive them of access to quality education and vulnerable to vices. Lack of electricity at primary and secondary schools in rural and peri urban areas creates an environment not conducive for ICT which further deprives them from accessing quality education. Access to electricity in hospitals and health centres particularly in the peri urban and rural parts of the IDP area will be critical in providing a safe birth environment at night and also responsible for quality health care by reducing the mortality rate and improving life expectancy in the IDP area.

3.7.10 Consideration of the Underlying Factors Contributing to the Issues Identified

Access to reliable energy is important in fostering economic growth and development. This is very critical in poverty and vulnerability reduction. Though Kabwe district is considered predominantly an urban area with 52.3% of the population with access to electricity it is imperative that all households in the district have access to clean energy. Lack of access to electricity limits access to quality health care and education

in the IDP. In order to promote environmental sustainability and human and social development, it is imperative that the IDP area enhances access to reliable and clean energy.

S/N	Core Issue	Ward Affected/Area
1	Lack of access to electricity in some rural and peri urban wards.	Chinyanja, Muwowo East and West, Mpima, Zambezi, Luansanse
2	High dependence on hydro power (ZESCO).	All wards.

3.8 Mining

Lead (Pb) and Zinc (Zn) mineral deposits occur in their natural states in many parts of Kabwe and mining activities span from 1902 to 1994 to extract these resources. The Kabwe mine closed in June 1994 when it became uneconomical to continue mining, leaving behind above-ground dumps of mineral-rich tailings, slag and waste. Agitation of these dumps through erosion, wind and other anthropogenic activities have continued to expose local communities living near the old mine to dust particles containing lead which has also contributed to contamination of soils in the local environment.

3.8.1 Key Government Priorities Being and To Be Implemented at a Local Level

The impacts of mining activities on the environment and human health, and in particular Lead contamination of the environment in some parts of Kabwe town have been recognized by both the government of the Republic of Zambia, non-government organizations, cooperating partners and the private sector. In view of that, various programmes to address this challenge have been implemented. The following interventions have been implemented and others are still under implementation:

3.8.1.1 The Copperbelt Environmental Project (CEP)

The Copperbelt Environmental Project (CEP), funded by the World Bank from 2003 to 2011, aimed to address environmental liabilities hindering mining investments in Zambia. Government-led initiatives under CEP in Kabwe included water supply improvement, mine plant area rehabilitation, and removal of mine waste from residences. Remedial measures extended to dredged materials from the Kabwe main canal, mine waste from Mulungushi Road slug dump, and the establishment of play parks for children's safety.

Studies examined lead contamination extensively in soil, air, surface and ground water, crops, and wildlife. A comprehensive human blood survey involving 2,373 people of all ages revealed that over 50% were children under 7 years. Intensive community

outreach programs raised awareness and provided simple messages on avoiding lead exposure, highlighting the project's holistic approach to mitigating the effects of lead contamination in Kabwe.

3.8.1.2 Kabwe Pilot Lead Remediation Project

The Kabwe Pilot Lead Remediation Project, conducted by Pure Earth in collaboration with Environment Africa, addressed lead contamination in Chowa in 2015 through remediation and encapsulation of 78 households in Chowa. The project also included environmental assessments, health education, and improvements in infrastructure. The selected area for remediation was based on its proximity to the mine, with findings indicating varying lead concentrations across townships, emphasizing higher levels near the mine and tailings (Ericson et al, 2016).

3.8.1.3 Kabwe Mine Pollution Amelioration Initiative (KAMPAI) project

The Government, in collaboration with the University of Zambia, Japan International Cooperation Agency (JICA), and Japan Science and Technology Agency (JST), implemented the Kabwe Mine Pollution Amelioration Initiative (KAMPAI), a five-year project that was aimed at monitoring and assessing ecological, economic, and health risks associated with lead exposure in Kabwe, with focus on evaluating lead contamination transport, distribution mechanisms, and exposure pathways. Additionally, the project undertook a health risk assessment to measure lead contamination in Kabwe communities and defined intervention measures. Two research studies conducted under KAMPAI, included "Lead Intoxicated Children in Kabwe, Zambia, 2015," which revealed alarming statistics where nearly all children in townships close to the former mining area had blood lead levels (BLLs) $\geq 20 \mu\text{g/dL}$, demanding urgent action. In the most affected townships, approximately 50% of children had blood lead levels $\geq 45 \mu\text{g/dL}$, warranting medical antidote treatment. Certain areas like Makululu, Magandanyama, and Kasanda exhibited even higher blood lead levels. The study emphasized the need for immediate and appropriate remediation, stating that medical treatment alone, without environmental and educational interventions, is insufficient to maintain a safe and healthy population (Yabe et al., 2015).

3.8.1.4 Zambia Mining Environmental Remediation and Improvement Project (ZMERIP)

The Government with support from World Bank is implementing The Zambia Mining Environmental Remediation and Improvement Project (ZMERIP) to address environmental health risks in heavily polluted areas of selected towns, including Chi Kabwe, where lead pollution is a significant concern. The ZMERIP has employed various strategies, such as remediating hotspots, improving environmental infrastructure, fostering socio-economic

empowerment, implementing educational initiatives, and strengthening policy and legislation. Notable accomplishments in Kabwe include the rehabilitation of the Kabwe Canal, an environmental impact study, soil assessment for lead levels, and targeted remediation near the Mine Primary School in Mutwewansofu, resulting in decreased lead exposure and health risks for approximately 225 pupils. The government is actively addressing health risks through drug procurement, blood lead level testing, health education, and an extensive awareness campaign in Kabwe. Further through the Zambia Mining Environmental Remediation Improvement Project (ZMERIP) about fifty-seven (57) organized groups in lead hotspot areas have so far been empowered with grants and capacity. The creation of the Lead Education and Awareness Teacher's Guide has been developed with aim to educate around 30,000 school children in lead hotspot areas.

Effects of Lead (Pb) on health of children is provided in summary in the table below for Blood Level testing done by Copperbelt Environmental Project (CEP) , METS, Pure Earth and KAMPAI;

Table 16: Effects of Lead on Health of Children

Name of Organisation	Number of Children Tested	Age Range (Years)	Geometric Mean BLL (µg/Dl)	WHO BLL Threshold (µg/Dl)	Remarks
CEP (2006)	2500	0 -7	38.2	5	Makandanyama, Makululu, Chowa and Kasanda children exhibited high BLL with 50 % needed to be put on treatment
METS (2015)	1166	0 - 5	32.6	5	Children from Makululu exhibited BLL
Pure Earth (2014)	196	2 - 8	48.3	5	50% of children from Chowa needed medical treatment and 26.5 had BLL exceeding 65.
KAMPAI	246	0-7	45	5	100 % sampled children had BLL above threshold in Chowa. 65% children from Kasanda and Makululu found with BLL above threshold.

ZEMA, 2021

Kabwe has had a long history of mining with major mineral discoveries dating back to 1902. The early mining methods from 1904 were of open cast type as most mineral deposits were found on the surface. In 1940, underground mining commenced due to industrialization, high demand for minerals, attractive world metal prices and the need to exploit mineral resources to support the country's economy. The major minerals exploited have been Copper, Lead, Zinc, Manganese and Gold. The demand for minerals and high prices on the international market has continued to contribute to the performance of the sector.

A total of 77 licenses for exploration were under review out of which 33 expired and 44 remained active as at December 2019. The active licenses comprised 22 small scale and 22 large scale licenses covering a total area of 481,874.41. (MMMD, 2020). Figure below shows the location of exploration licenses. The area includes licenses that have spilled over to the neighbouring districts and not Kabwe alone.

Figure 39: Exploration Licenses in Kabwe District

3.8.2.1 Quality of Service Including Key Indicators of Performance

The effects of Lead on soil in Kabwe has been evident from the studies undertaken by various organizations namely, Copperbelt Environmental Project (CEP), Pure Earth and KAMPAI and ZMERIP. Other interventions that Government has been implementing in the district to reduce pollution and to promote sustainable mining include;

- i) Intensifying sensitizations in the district in order to reduce exposure to lead contamination especially among residents living around the Mines.
- ii) Conducting compliance inspections and monitoring of all the mines in the district, to ensure they operate in accordance with the provisions of the existing Laws such as the Environmental Management Act, Occupational Health and Safety Act, Public Health Act, and others.
- iii) Closure of all illegal mining activities, which has potential to increase contamination levels of lead in the district.
- iv) Supporting more research in this field with the aim to find solutions and preventive measures in order to curb pollution.

3.8.3 Issues Arising from the Public Participation Process

It is evident that some Mining Companies are still engaging in indiscriminate disposal of Zinc slag/ waste which contains residues of Lead. Some slags are used to repair damaged roads within the District, and some are spread in private yards and plots. This in turn is spreading Lead contamination to other less affected areas.

The affected communities have also complained of dust arising from trucks transporting raw materials from the canals to the plants, especially in Chowa, Kasanda mine, and Kawasaki area. Solutions should be found to protect these Communities such as sprinkling or pouring of water using a Water Bowsers, tarring the roads, or finding alternative routines.

Despite monitoring and compliance inspections conducted by ZEMA and the Local Authority, some Mines are still emitting heavy smoke from their premises through chimneys into the air affecting the surrounding residents. Compliance inspections and enforcements need to be intensified to curb this nuisance.

3.8.4 Impact of the Continuation of Existing Trends on Population and Settlements

More than one third of the population of Kabwe- over 76,000 people- live in lead contaminated townships. Studies estimate that half of the children in these areas

have elevated blood lead levels that warrant medical treatment. Twenty five years after the main mine closed, high lead levels, exceeding international standards, remain in the soil and dust around the former mine, particularly in the townships of Kasanda, Magandanyama, Chowa, Mutwe Wansofu, and Makululu. The former mine area itself still hosts tailings and other waste from the mine and smelter, including a large waste dump known as “black mountain” and has become a site for artisanal and small-scale mining.

3.8.5 Impact on the Environment and Climate Change

In Kabwe, there are a number of mineral processing companies, which includes manganese processing plants. Some of these plants are using charcoal as a carbon reducing agent. This is a negative development on natural resources, a vice that is encouraging rapid deforestation and indirectly impacting on climate change. In line with that, ZEMA prosecuted a manganese processing plant which was found using charcoal with heaps of charcoal. Prosecution followed after the company failed to adhere to the conditions of the Order which included stopping the use of charcoal in the processing plant. The picture below shows the heaped charcoal at a manganese processing plant in Kabwe.

Figure 40: Heaped Charcoal at Manganese Processing Plant

Source: ZEMA, 2022

3.8.5.1 Illegal Mining Activities

Illegal mining activities have become rampant around the district particularly along the canal, in Chowa (old over burden waste dumps) and Waya area. The canal is earmarked for rehabilitation and illegal mining activities occurring may

have a negative impact on the embankment. The mined materials which mostly contain lead are supplied to industries located mainly in Mukobeko Township and Kasanda mine areas. The transportation of these materials has contributed to air pollution emanating from dust emission. Further Some of these mining activities are taking place in the midst of residential properties and are found with water coming from underground aquifers.

Figure 41: Under Ground Aquifers affected by the Mining activities

Figure 42: Mine in the midst of residential houses in 2019

3.8.6 Impact on Gender and Vulnerable Groups

Socio-economic factors also influence exposure to lead, since families living in vulnerable conditions are more likely to live near industrial plants or work directly in them. Young children are especially vulnerable to the toxic effects of lead and can suffer profound and permanent adverse health effects and disabilities, particularly affecting development of the brain and the nervous system. Exposure of pregnant women to lead results in the exposure of the foetus, and high levels can cause miscarriage stillbirth, and premature birth and low birth weight. Lead also causes long term harm in adults, including increased risk of high blood pressure and kidney damage. At very high

levels, lead poisoning can be fatal. Children younger than 6 years are especially vulnerable to lead poisoning, which can severely affect mental and physical development.

3.8.7.1 Summary for the sector

The core problem affecting the sector in the district is the impacts of mining activities on the environment and human health, and in particular Lead contamination of the environment in some parts of Kabwe town. This mainly affects the children and the poor living around these mining areas.

3.8.8 Consideration of the Underlying Factors Contributing to the Issues Identified

The major underlying factor contributing to the identified issue is Illegal mining activities that have been taking place around the canal for some time in Kabwe. People found on site are mining the material as they are interested in Zn. The mined material also contains Lead.

S/N	Core Issue	Wards/Location
1	Careless disposal of Zinc slag/ waste containing residues of lead by some mining companies	Kasanda mine, Chowa, Mukobeko, Mine area
2	Dust arising from trucks transporting raw materials from the canals to the plants, especially in Chowa, Kasanda mine, and Kawasaki area	Chowa, Kasanda mine, and Kawasaki
3	Air pollution	Mukobeko, Kasanda mine, Chowa, Mukobeko, Mine area

3.9.Social Sector

The social sector is a culmination of core issues that were submitted in relation to education, health, social welfare and community development.

3.9.1 Education

3.9.1.1 Key Government Priorities to be implemented at A Local Level

Kabwe District Education Board has made remarkable progress towards achieving quality education by implementing education reforms aimed at revamping the education sector. One such reform is the introduction of Production unit policy which was introduced in 2019. This intervention has given children an opportunity to acquire life skills from various production unit activities that schools are mandated to implement. Other interventions include supporting Community schools and alternative mode of education in order to give a chance to children and adults alike who could have dropped out of school for various reasons. Re-entry policy is also an intervention embraced by the

district that has made it possible for a number of girls who had left school due to pregnancy to return and complete their education after giving birth.

In summary, the following are some of the priority policies and plans being implemented under Education Sector at local level including their key features;

- i. National Policy on Education of 1996 was premised on the philosophical rationale for future development of education on three broad considerations;
- ii. The role of the government in education
- iii. Principles for the development of education and practices; and
- iv. The aims of the national education system.
- v. Zambia Re-entry Policy of 1997 guarantees girls the right to stay in school as long as they chose to during the pregnancy, take a maternity leave and come back after delivery.

The following are priority areas for this sector:

- i. Infrastructure development;
- ii. Teacher training, recruitment and deployment improvement;
- iii. Equity and inclusive education enhancement;

3.9.1.2 Description of the Existing State of Development

3.9.1.2.1 Availability of Service

Education as a basic human right is central to the socio-economic development of the district. Education provides various opportunities by providing innovation and social cohesion. Table 3.1.1 shows the enrolment levels in the different education levels in the district from 2010 to 2021

Table 17: Enrolment at different level

Enrolment	2017	2018	2019	2020	2021	TOTAL
Early Child Education	1,600.0	1,872.0	2,144.0	2,416.0	2,689.0	13,326.0
Primary School	45,990.0	47,986.0	49,982.0	51,978.0	53,973.0	448,642.0
Secondary School (8-12)	23,343.0	23,923.0	24,276.0	24,627.0	25,693.0	236,926.0
Total Enrolment	70,933.0	73,781.0	76,402.0	79,021.0	82,355.0	698,894.0

Source - DEBS, 2022

An analysis of the enrolment levels for early education, primary and secondary schools in the district was conducted. Early education enrollment increased from 1600 in 2017 to 2689 in 2021. For the primary education level, enrolment increased from 45,990 in 2017 to 448,642 in 2021. Similarly, the secondary level also recorded an increment from 23,343 pupils in 2017 to 25693 in 2021.

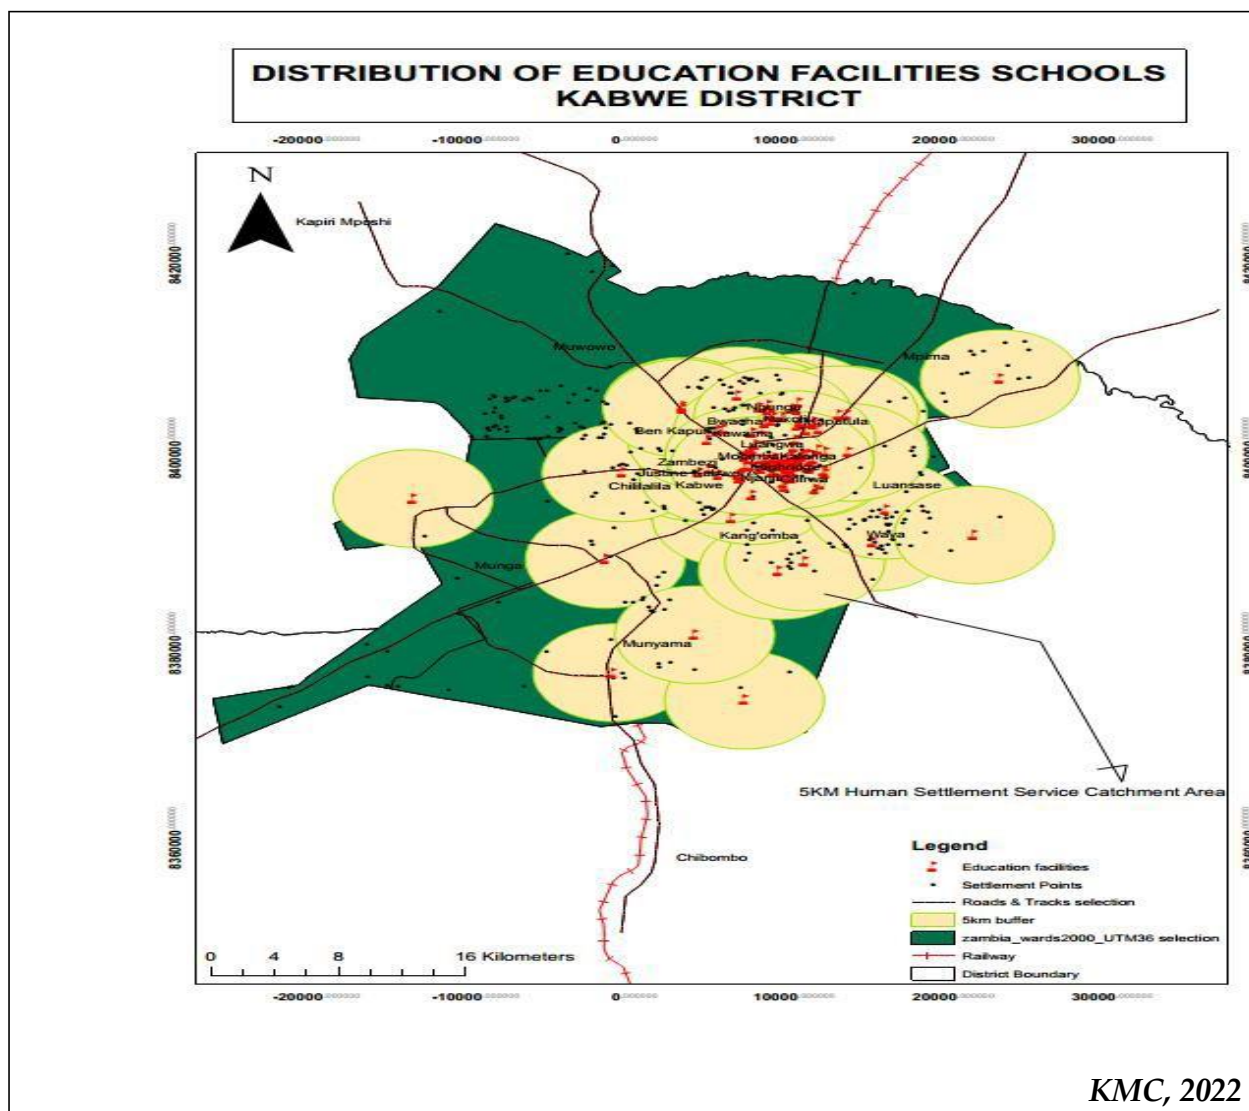

The current population growth is worrying hence the need to consider the carrying capacity in terms of infrastructure development.

3.9.1.2.1.1 Distribution of Schools in the District

An analysis of the distribution of schools in terms of location in the district was conducted which showed that there was a high concentration of schools in the urban area than the rural parts of the District.

The map below shows the distribution of schools in the district in relation to the recommended 5km radius for accessing educational services according to educational standards.

Figure 43: Distribution of Schools in the District

3.9.1.2.1 Quality of Service Including Key Indicators of Performance

3.9.1.2.1.1 Total Number of Teachers from 2016 to 2021

The total number of teachers in the district was 1,967 in 2016 and 2964 in 2021 as presented below.

Table 18: Total number of teachers from 2016-2021

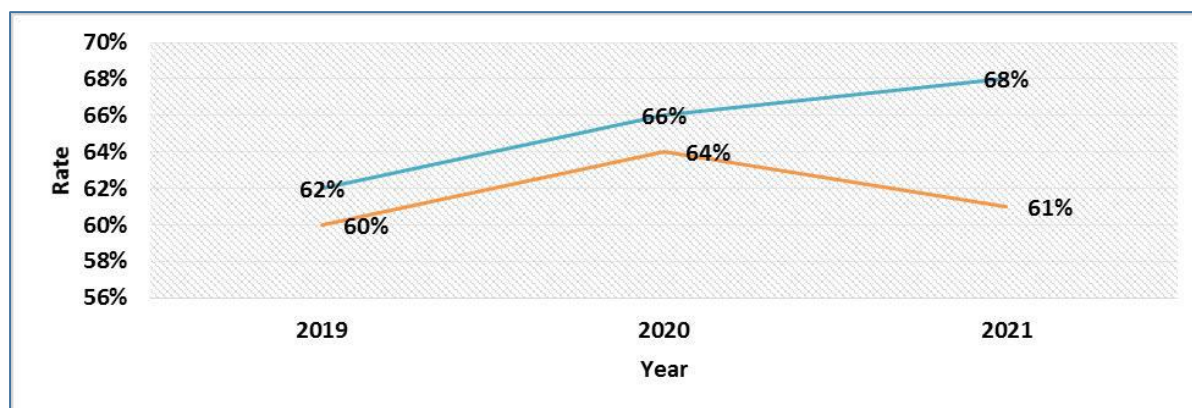

Year	Sex	2016	2017	2018	2019	2020	2021
Early Child	Males	18	28	32	41	175	150
	Females	30	42	44	54	270	278
Primary	Males	40	443	439	483	488	490
	Females	759	798	794	803	1374	1325
Secondary	Males	512	503	522	531	641	645
	Females	608	619	636	648	894	895

Source: DEBS, 2021

3.9.1.2.1.2 Progression Rate: Primary to Junior Secondary

There has been a positive progression rate from primary to junior secondary school in both girls and boys. However, in 2021 there was a slight drop-in progression rate for boys as shown in the figure below.

Figure 44: Progression rate from Primary to Junior Secondary

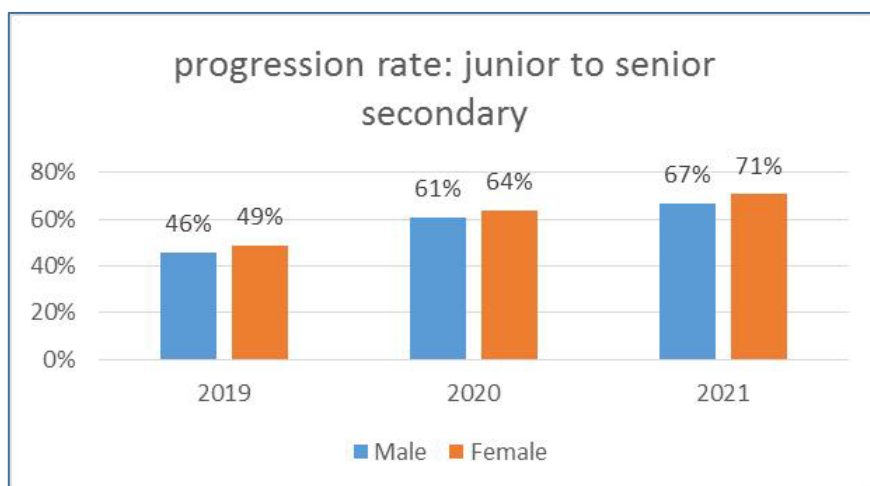

DEBS, 2021

3.9.1.2.1.3 Progression Rate: Junior to senior secondary

There has been a positive progression rate from junior to senior secondary school in both girls and boys. This could be attributed to the reading program being implemented in schools.

Figure 45: Progression Rate from Junior to Secondary

DEBS, 2021

3.9.1.2.1.4 Number of Higher Learning institutions

In terms of higher learning, the district has 1 trade college, while the number of universities and Skills training institutes is the same three (03).

Although the ratio for the secondary sector seems to optimal, we should note that the district still needs more teacher of Mathematics, Science and ICT.

Table 19: Number of Teachers needed as at 2021

Number of Teachers Needed	Science	Mathematics	ICT	Business Studies	Primary
	84	84	42	30	120

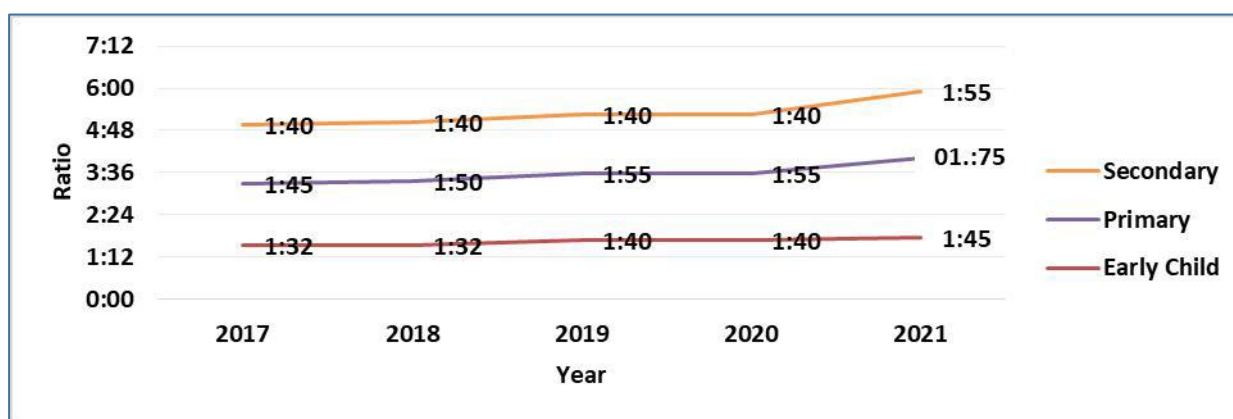

3.9.1.2.1.5 Teacher-Pupil Ratio

The district had seen a teacher-pupil ratio increasing to 1:75 for primary schools, 1: 55 for secondary schools and 1:45 for Early Childhood as of 2021. This is contrary to the education standard of 1:45, 1:40 and 1:25 respectively.

The rapid increase in enrolments could be attributed to inadequate infrastructure development in terms of classroom blocks. Other factors being the introduction of the education for all policy (Free Education) which has created demand for the service and the sound partnership that has existed between the government and the cooperating partners coming on board to help the learners with other school requisites such as CAMFED, DREAM to mention but a few.

The figure below shows the pupil teacher ratio at all levels of education.

Figure 46: Teacher-Pupil Ratio

DEBS, 2021

3.9.1.2.1.6 Number of Schools, Enrolment, Teachers and Classrooms per Category of Education

3.9.1.2.1.6.1 Early Childhood Education Centres (ECE) by Category

The district has a total number of 78 ECE centres encompassing community, public and private categories. The private ECE centers had the highest enrollment levels of a total of 1432, while community centers had the least enrollment levels of 338. The total enrollment levels for public education centers was 919. The low enrolment levels for community ECE centres could be attributed to limited classroom infrastructure.

The table below is a summary of the total number of education centres, enrolments, number of teachers segregated by gender as well as number of classrooms at ECE level.

Table 20: ECE Centres by category

Category	Number of Centres	Enrolment			Number of teachers		Number of classrooms
		Boys	Girls	Total	M	F	
Community	3	170	168	338	8	30	6

Public	43	452	467	919	28	57	52
Private	32	715	717	1432	139	198	59
Total	78	1337	1352	2689	175	285	134

Source: DEBS-Kabwe, 2022

3.9.1.2.1.7 Primary Schools by Category

The district has a total number of 115 Primary schools of which 8 are community, 64 are public, 4 are grant aided and 48 are private schools. Public schools recorded the highest enrollment levels of 42,335 against the number of 415 classroom blocks. This can be interpreted that the classroom infrastructure in public schools is inadequate. In terms of classroom to pupil ratio, this denotes that the classroom ratio is 1:102 contrary to the recommended 1:40 per classroom. The table below is a summary of the total number of education centres, enrolments, number of teachers segregated by gender and the number of classrooms at primary level. Inadequate classroom

Table 21: Total number of Education Centres , teachers and enrollment levels

Category	Number of Centres	Enrolment			Number of teachers		Number of classrooms
		Boys	Girls	Total	M	F	
Community	8	1,217	1,232	2,449	28	90	134
Public	64	21,274	21,061	42,335	261	985	415
Grant Aided	4	927	2,057	2,984	26	110	56
Private	48	3,023	3,182	6,205	111	162	307
Total	115	26,441	27,532	53,973	426	1,347	912

Source: DEBS-Kabwe, 2022

3.9.1.2.1.8 Secondary Schools by Category

The total number of secondary schools in the district is 36 segregated as follows; 28 public, 6 grant aided and 2 private. In terms of enrollment levels, girls recorded the highest number. The high number of girls enrolled in Primary school may signify progress towards gender equality in education. Further, this may signify efforts to promote equal educational opportunities for both genders which is critical to the

development of the district.

Table 22: Secondary Schools by Category

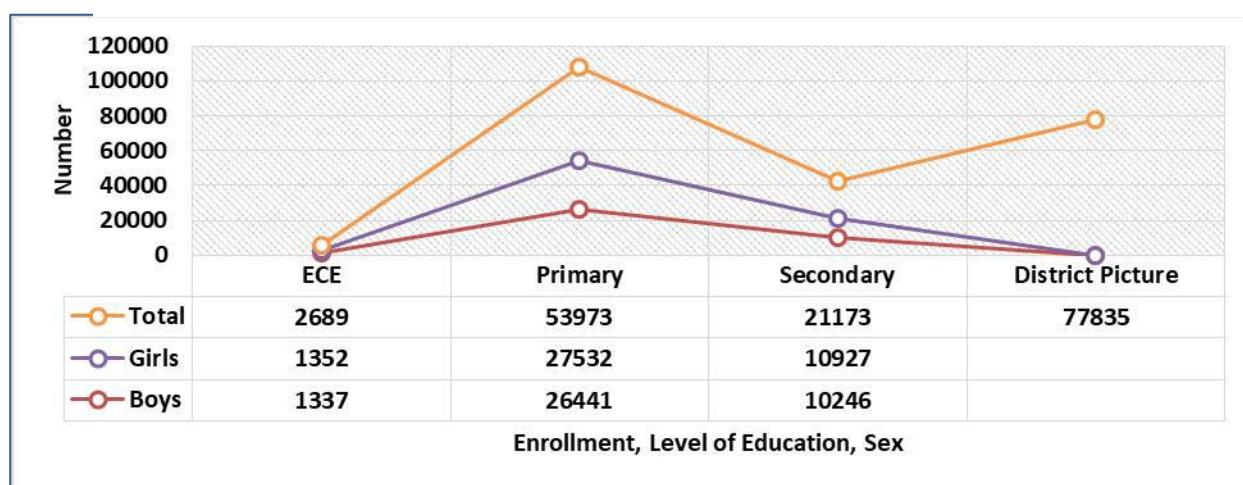

Category	No of Schools	Enrolment			Number of Teachers		Number of classrooms
		Boys	Girls	Total	M	F	
Public	28	9,116	8,249	17,365	550	763	311
Grant Aided	6	869	2,470	3,339	77	105	78
Private	2	261	208	469	18	27	22
Total	36	10,246	10,927	21,173	645	895	411

Source: DEBS-Kabwe, 2022

3.9.1.2.1.9 Enrollment by Level of Education by Sex

Looking at the district enrolment levels analysis by school category and gender i.e. ECE, primary and secondary clearly indicates that there are more girls than boys accessing the education service. Primary and secondary level shows the highest enrolment levels standing at 27532 females and 26441 males, 10927 females and 10246 males respectively indicating a huge discrepancy between the females and the males enrolled in schools. For details regarding district enrolment levels refer to graph above. The youthful population in the district shows that there will still be demand for both primary and secondary school education services owing to the rate of population growth.

Figure 47: Enrollment by Education level and sex

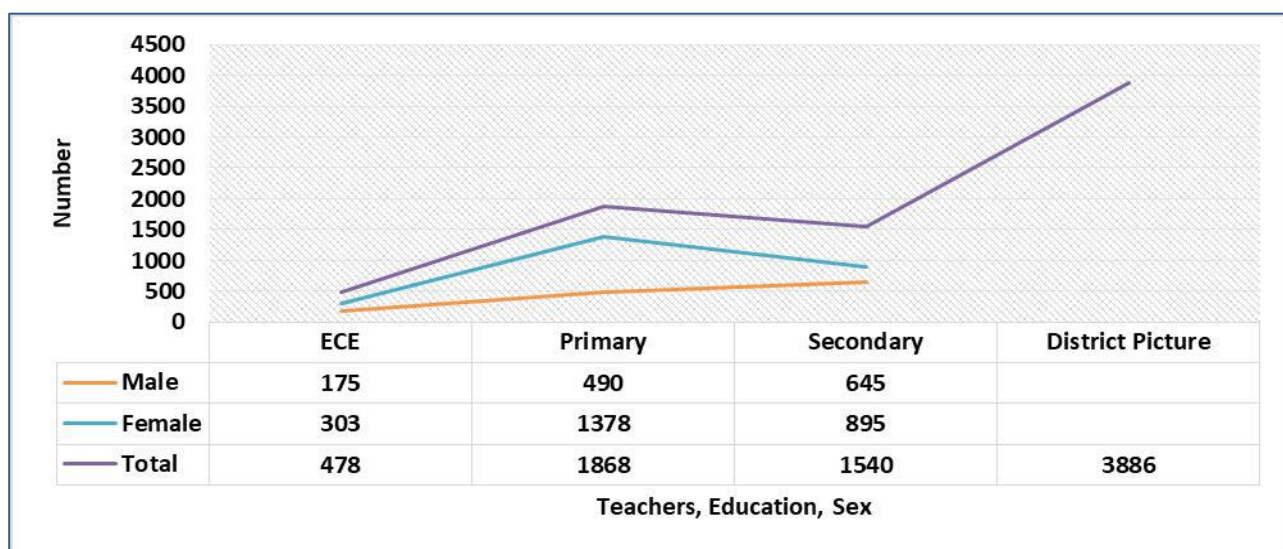

DEBS-Kabwe, 2023

3.9.1.2.1.10 Number of Teachers by Level of Education by Sex

The total number of teachers in the District is 3886 of which 478 are under the ECE category, 1868 are under Primary school and 1540 under Secondary schools which presents fair staffing levels.

Figure 48: Number of Teachers by Education Level and Sex

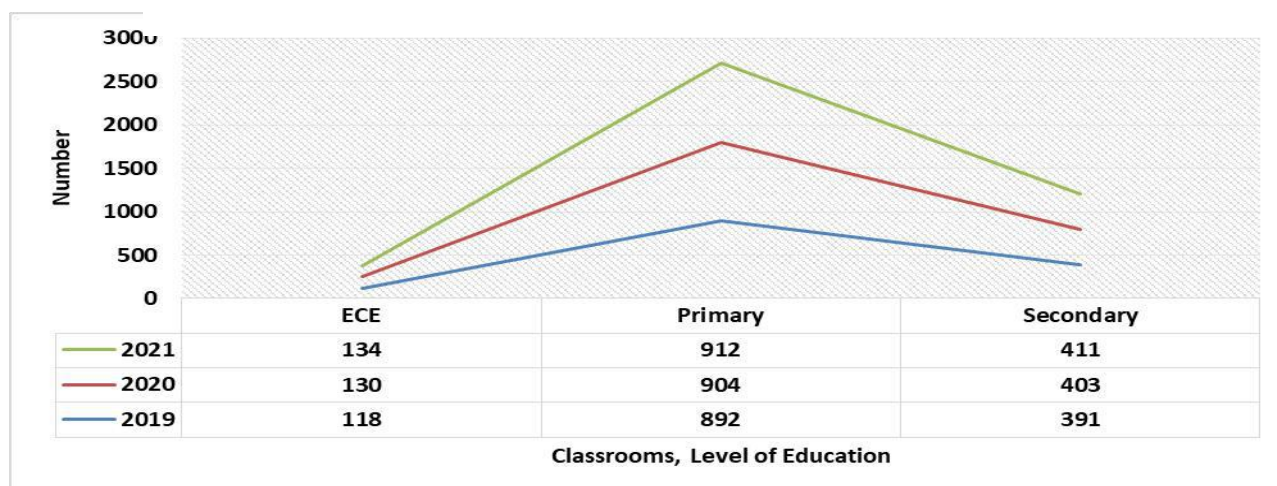

DEBS-Kabwe, 2023

3.9.1.2.1.11 Number of Classroom at each level of Education

The district experienced an increase in the number of classrooms from 118 in 2019 to 134 in 2021 under the Early Childhood Education. In terms of Primary level education, the district had a total number of 912 classrooms in 2021 and 411 under Secondary School Category. This shows that the primary school category had the highest number of classrooms. This is good for the district in terms of promoting access to education and a smooth transition to education. However, the low number of classrooms at secondary category may impinge academic progression, therefore, the IDP will focus on a comprehensive and well-planned educational infrastructure for all categories in order to provide a seamless learning journey for learners in the district. The figure below shows the number of classrooms in the district from Early Childhood to Secondary.

Figure 49: Number of Classrooms at each level Education

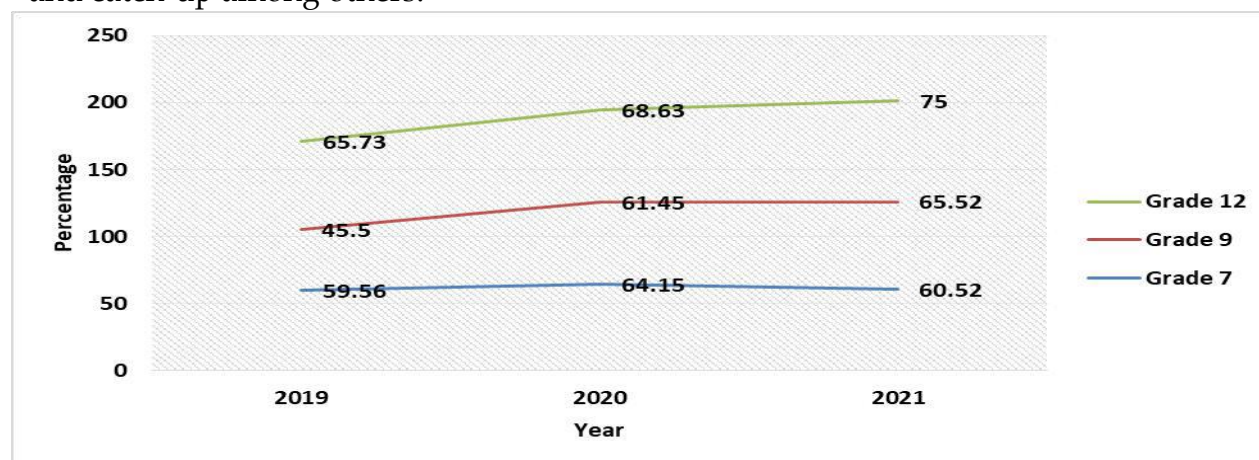

DEBS, 2023

3.9.1.2.1.11 Performance of the District in National Examination

The figure. below shows the district performance in the national examinations standing at 75% in 2021 at grade 12, 66% at grade 9 and 61% at grade 7 level. Grade 12 and 9 district examination performance showed a steady increase by 6% and 5% respectively. The improved examination performance can be attributed to intensified implementation of the reading in school as ascribed in the reading policy that learning can only take place when learners are able to read such that those learners who qualify to grade 8 are subjected to the reading program. As for the drop in the grade 7

Figure 50: Performance in National Examination

performance, this was due to slow breaking through by the learners in terms of reading abilities making it difficult for learners to catch up in other subjects. This is the more reason why the district has gone flat out to implement the reading policy and catch-up among others.

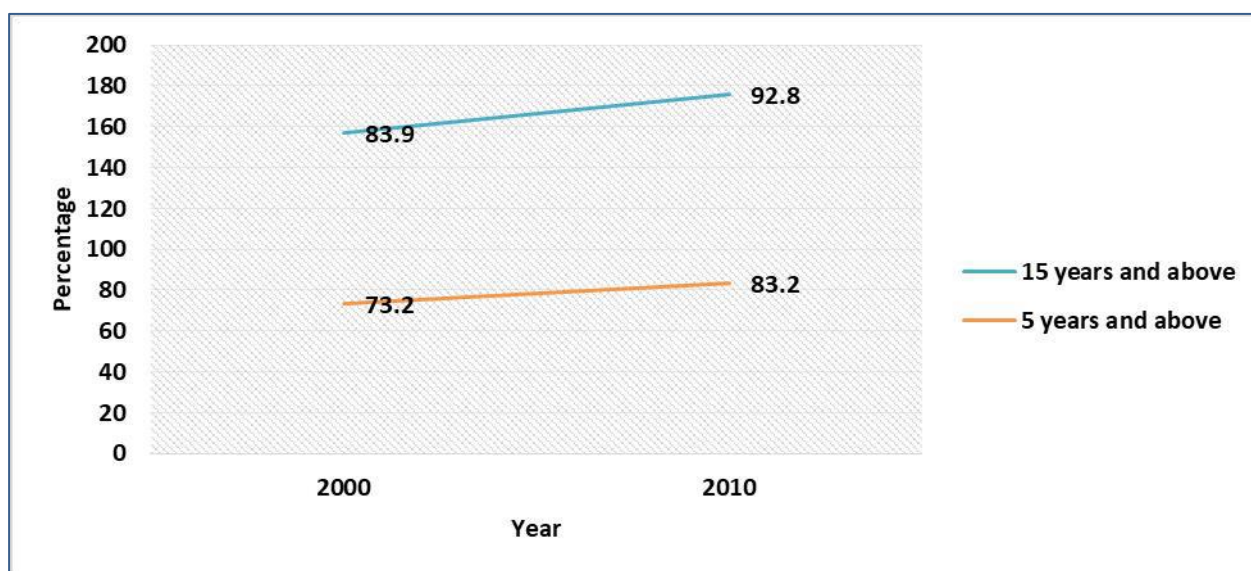

DEBS, 2021

3.9.1.2.3.13. Literacy Rates, 2000 and 2010

According to the CSO (2020) report, the literacy rates in Kabwe have been improving as shown below:

Figure 51: Literacy Rates, 2000 and 2010

CSO, 2000 and CSO, 2010

3.9.2 Issues Arising from the Public Participation Process

During the public consultation process of the planning survey and issues report conducted. The report revealed that the education sector in the district is able to provide educational services at all levels of education i.e. secondary, basic and early childhood education (ECE), primary, adult learning in certain areas of the district while in others areas it is a challenge to access these services because of non-availability of the services and great distances covered to access them.

This is evidenced by the number of educational facilities available. The district has thirty-six (36) Secondary Schools of which 28 are Public, 6 Grant Aided and 2 Private, a total of one hundred, twenty-four (124) primary schools of which 4 are grant aided, 64 Public, 48 private, 8 communities, eighty-three (83) ECE centres of which 3 are community, 48 public and 32 private and Seventeen (17) special education units for the differently abled).

While Kabwe district is classified as an urban district school, 15 schools are situated in peri-urban and rural areas of the district. However, the major challenge in the district is that it has no boarding secondary school education service. This has a huge negative effect on the locals to acquire the secondary boarding education.

3.9.3 Impact of Changes Anticipated Over the Next Ten Years

3.9.3.1 Population Change – Future Demand for Services and Facilities

According to the Kabwe District Education Board Office database, the district has a total of 82355 pupils. Based on projections by the year 2035, it is projected that the district will have more than 125000 pupils. These projections give an indication that demand for both primary and secondary schools including educational facilities such as classrooms, desks, books will increase and if not looked into service provision will go down. Looking at the current Teacher pupil ratio which is 1-60 and 1-55 for primary and secondary schools respectively, clearly, they will be a huge demand for more teachers in the district. Deployment of teachers will be cardinal in order to avoid high teacher pupil ratios thus compromising on the quality of education been offered, as opposed to the required 1:45 and 1:40 for primary and secondary respectively according to the education standard . Currently the number of classrooms stands at 1457 which will be inadequate as we head to 2035 hence the need for construction of more classrooms. In terms of school furniture (desks) the district stand at 15,989 and 30,961 more desks will be required.

3.9.3.1.1 Needs Assessment

With reference to the projected enrolment levels for early Childhood, Primary and Secondary Schools over the next 10 years, there will be need for the following:

-  Deployment of 1000 teachers
-  Procurement of about 30,961 desks
-  Construction of about 900 staff houses
-  Construction of 1000 classrooms

3.9.3.1.1.1 Existing and Proposed Investment and Development Programmes

Table 19 shows existing and proposed investment and development programmes under education sector in Kabwe district.

Table 23: Existing Development and Proposed Investment Program

Existing Investment	Proposed Programmes
• DEBS Office • 147 Schools • Construction of a 1x2, 1x3 CRBs, 1x2 Science Lab/ HE, 2X2 Semidetached houses & 2No. Ablution blocks and water reticulation at Kang'omba Day Secondary School. • Construction of 10 classroom double storey building at Family Future School • Construction of a 1x3Science Lab at Broadway Secondary School • Construction of a 1x3 CRB at St Mary's Primary School • Construction of 1x3CRB at Neem Tree Secondary School • Construction of a 1x2CRB at Katuntulu Primary School • Construction of an Administration block at Munyama Secondary School • Construction of 1x2 Science Lab at Chindwini C Secondary School. • Construction of a 1x3CRB at Nabusanga Primary School • Construction of a 1x4 Science at Mwashii Secondary School	• Construction of a Boarding School at Kafulamase Primary School. • Construction of a Boarding School at Munga Primary school, Nyenyezi and Kangomba secondary school • Construction of a 3x3 CRBs, Ablution block and a Wall Fence at Makululu B • Construction of a Day Secondary School at Kasanda Malombe Secondary School • Construction of 4x3CRBs an Ablution block at Nkurumah Extension Primary School • Construction of a 3x3 CRBs and an Ablution block at Nakoli Grace primary school • Procurement of Desks in all the Schools • Construction of Kawama primary school • Rehabilitation of all infrastructure in all the dilapidated schools • Rehabilitation of the DEBS Office • Procurement of computers in Schools

3.9.3.1.2 Assessment of the Likely impact of ongoing and committed investment and development programs on land use and population distribution patterns

Arising from the developmental needs as submitted during the community engagement meetings with community and other government stakeholder, it is clear that greater impact will be felt on the land use as the district begins to expand its infrastructure development as it includes land clearing to pave way for the proposed educational infrastructure developments to take place across the district e.g. construction of the proposed boarding secondary schools in Munga, Kafulamase and primary schools in the district. Positively, the implementation of the proposed educational infrastructure projects will have an advantage in providing the educational services close to the people so that they don't cover long distances to access the services.

Less than 5% of Land is gazetted for Institutional land in Kabwe of which schools are a part of. The continuation of existing trend of development has an impact on the current Land use. Currently the district has recorded demand for land for private schools as most land is zoned as agriculture. There is a current trend of residential housing being turned into Institutional use i.e. private schools in order to meet demand for the service. Both Government and Private Schools have continued to lobby for more land in order to meet the needs of the school going children such as expansion of classroom blocks, playground areas, laboratories etc. In some circumstances play parks and open spaces are being used as playgrounds for children due to lack of space within their designated schools. With a projected increased population Education infrastructure approximately 250 Ha of land would be needed. Population distribution will continue to be concentrated in the urban part of the district.

3.9.3.2 Environment and Climate Change Analysis

3.9.3.2.1 The Impact of Existing Trends on the Environment and Climate Change

The effects of environmental disruption and climate changes in the education sector are mostly felt by the school going children. In the events of climatical disasters such as floods, broken bridges etc. schooling gets disrupted denying the children the right to education. School infrastructure is also affected by heavy rains there by causing danger to the learners well-being, prolonged disruption of education and limited access to education opportunities e.g Gombe Primary School had a 1X2 class room block roof blown off, Katondo primary school had a blown off roof on a combined ablution block and Twafwane primary school also had a 1X2 classroom block, a 1X3 classroom block and 5no. X double VIP toilets blown off roofs all due to the past heavy rains. Poor agriculture yield causing hunger is also a major problem as

children may not be able to attend school and this compromises their performance. The intense heat associated with climate change contributes to increase in disease outbreaks resulting in deaths leaving most children orphaned.

Education helps people understand and address the impacts of the climate crisis, empowering them with the knowledge, skills, values and attitudes needed to act as agents of change. Education sector has recently incorporated issues relating to climate change in the curriculum for sensitization purposes. Strategies have been put in place to ensure conservation and preservation of the environment through tree planting activities, Keep Kabwe Clean green and healthy Campaign and preservation of open spaces. On the other hand, drought and increasing temperatures lead to poor harvests and food scarcity. This causes malnutrition among school going children, which impairs their retention and learning performance. Lack of food also increases absenteeism from school.

3.9.3.3 Issues Arising Relating to Gender Groups and Vulnerable Groups

Low educational attainment can lead to the entrenchment of unequal power structures as well as discriminatory gender norms and attitudes at individual or household level, which may then be replicated and perpetuated at community level through unequal practices within schools. Policies and gender roles affect a nation's education system by either not having a safe space for young girls to learn or not letting them have the opportunity of a quality education.

3.9.3.4 Summary of the Core issues

Shown below is a table highlighting summary of issues raised during the Consultative meeting.

Table 24: Core Issues Arising from the Public Participation

ISSUES RAISED	WARD AFFECTED
• Lack of equipment at Ngungu for skills training at Ngungu resource center that can be solved by procurement of equipment's such as tailing machines, catering equipment and power electrical • Inadequate desk in schools which can be solved by procurement of new desks in schools using CDF • Inadequate classrooms which can be solved by construction of classrooms in the wards to reduce congestion in school(BWACHA) • High levels of illiteracy and lack of special education units specifically the people living with disability in community • Inadequate space to accommodate both primary and secondary school pupils hence the need to construct enough schools in the different parts of the wards has the population increases due to the introduction of free education. • Lack of accommodation for staff members • Construction of staff houses at Charity primary school and also the construction of computer room for the staff members • Lack of adult education center • Inadequate education facilities such class room blocks and computer rooms (Ben kafupi) • Lack of teachers' accommodation in community which	• Bwacha • Ben Kafupi • Kangomba • Munyama • Chimanim ani • Chinyanja • David • Ramusho • Waya • Katondo

- can be solved by construction of 1x3 staff houses • Lack of primary school in kasavasa • High levels of school drop out • Lack of survivor skills for school leavers such catering and plumbing which can be solved by youth empowerment through co-operatives and clubs • Lack of laboratory equipment in schools	• Kalonga • Luansase • Chililalila
--	--

3.10 Health Sector

Just like many other District in Central Province, Kabwe's Health profile is characterized by the high prevalence and impact of preventable and treatable communicable diseases and also the growing burden of non-communicable diseases. Among the major factors leading to the high disease burden is the persistence of infectious diseases such as TB, Malaria, HIV and AIDS, and diarrhea and Pneumonia among under five (5) children. The district is also faced with the problem of cases of stunted growth, underweight and wasted children of the under-five population.

Kabwe District does not have a first level referral hospital, therefore, specialized and severe cases are referred to the provincial third level hospitals namely, Kabwe Central Hospital and Kabwe Women, New-born and Children Hospital, for care and management.

3.10.1 Key Government Priorities Being and to be Implemented at a Local Level

The district is fully aware that, a healthy population leads to economic productivity. And so, Kabwe is resolute to transform into a district of healthy and productive people. It is worth to note that, a healthy labor force is crucial for the successful attainment of Zambia's Vision 2030 objective of becoming a prosperous middle-income nation as it enables the country to enhance its economic productivity and earn a substantial demographic dividend.

With that in mind, health will be top priority for the district during the IDP period. Emphasis will be placed on strengthening health systems and services using the primary health care approach, to enhance the wellbeing of all residents. Efforts will be expended in reducing the prevalence of diseases. To achieve this, investments will be made in strengthening health promotion programmes and ensuring availability of all critical health system ingredients including adequate medical personnel, equipment, infrastructure and medical supplies.

3.10.2 Description of the Existing State of Development

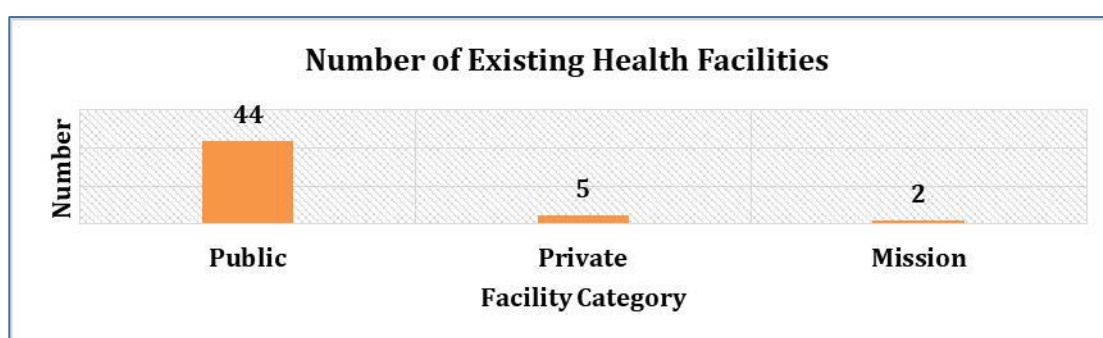

3.10.2.1 Availability of Service

Kabwe district offers promotive, preventive, curative, rehabilitative and palliative care services. Kabwe's only referral hospital (Kabwe General Hospital), houses an X-Ray department where ultra sound, ECHO, ECG and Radiology are done. It has a theatre enabling a range of surgical services; a laboratory where a number of tests are done and a mortuary though without mourners' shelter. In addition, the district offers MCH, ART, EMTCT and VMMC services in all its facilities.

3.10.2.1.2 Existing Health Facilities in the District

The district has total number of health facilities of 51 to service around 247,000 populations. Of these 51 facilities; 44 are Public, 5 Private and 2 owned by the missions.

Figure 52: Number of Existing Health Facilities

Source: KDHO, 2022

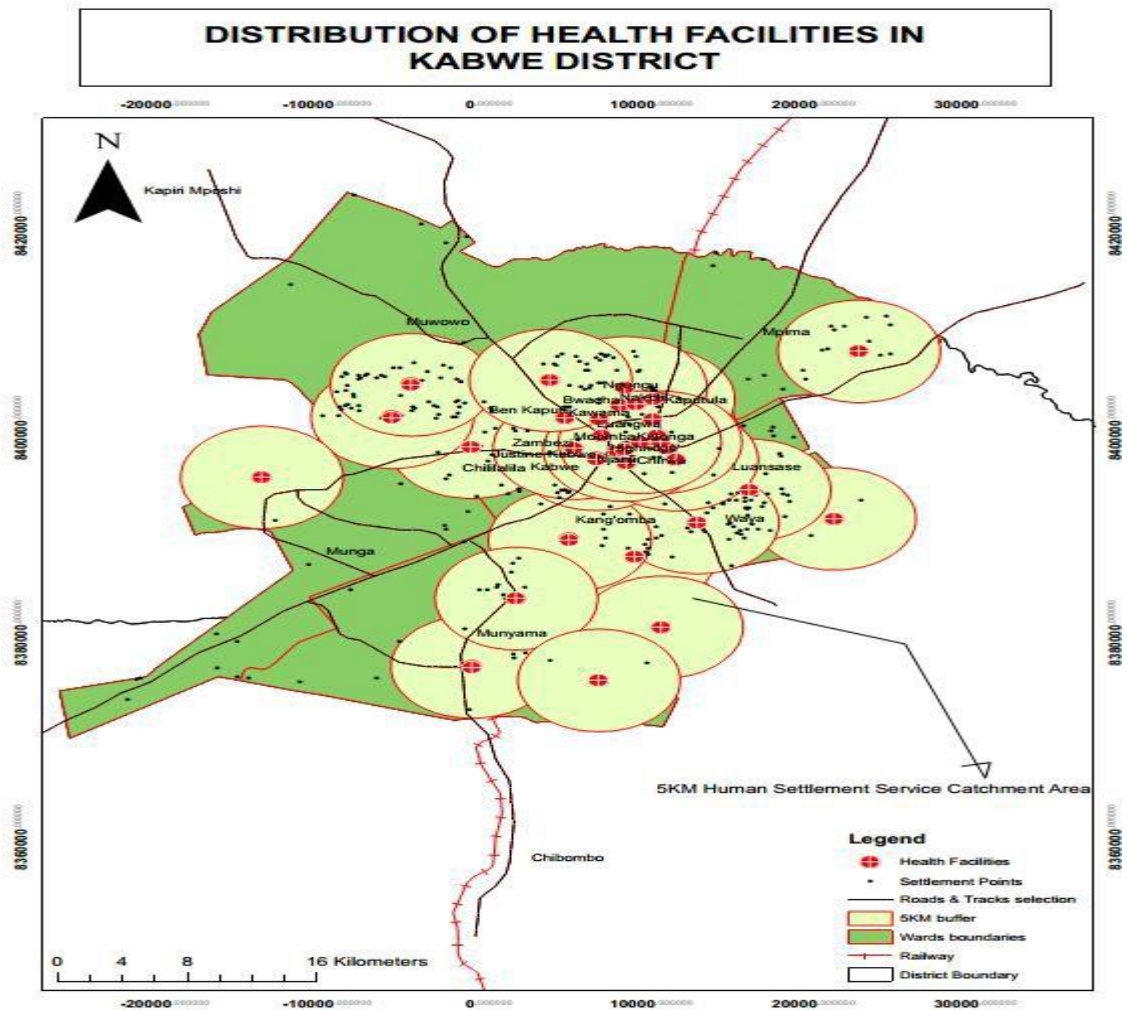

3.10.2.1.3 Distribution of Health facilities

Health services are provided through a delivery system that pursues to provide health services as close as possible to the people as envisioned by the Ministry of Health policy of 2011, the Eight National Development Plan and the country's vision 2030. The figure below shows that, the health facilities in Kabwe are not evenly distributed. Whereas some parts especially in the urban area are serviced by several health facilities located within short distances, the rural parts of the district are serviced by small facilities such as health posts coupled with long distances and inadequate numbers of health workers due to lack of accommodation. This evidently shows that the facilities are spaced at a radius of more than the national accessibility standards of 5Km and this

makes it difficult for the rural population to access health services.

Figure 56: Distribution of Health Facilities

Figure 53: Distribution of Health Facilities in Kabwe District

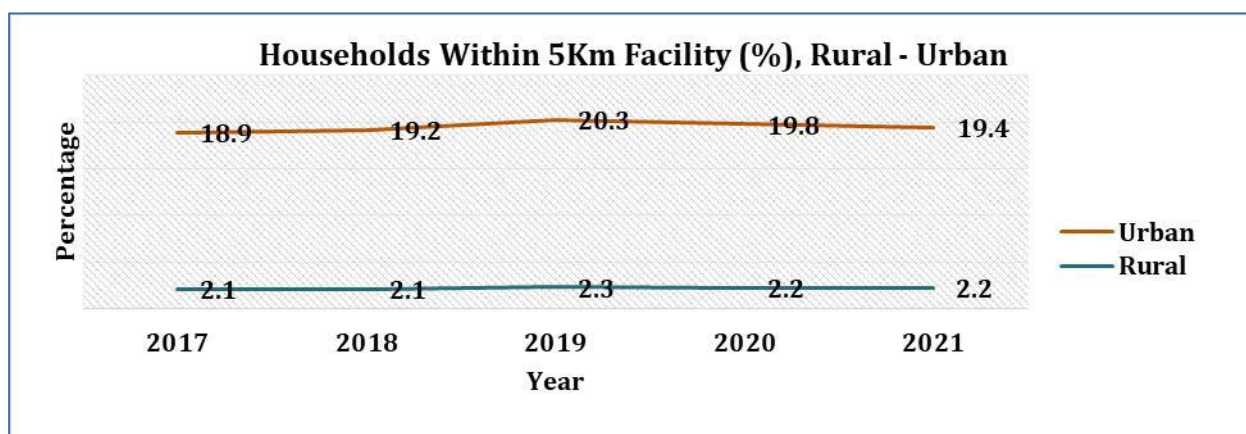

Source: KMC, 2022

3.10.2.1.4 Number of Households within 5km Facility

The figure below shows that, only 22% of the total households in district were within 5Km of the existing Health Facilities as at 2021. On comparison on rural-urban, the graph indicates that, only 2.2% of 22% households lived within 5km of the health facilities in the rural areas. This makes it difficult for many people to access health services. This unequal and inadequate spatial distribution of health facilities presents the district with numerous challenges. Spatial distribution of these health facilities is therefore a serious issue of concern. The figure below denotes the need for construction of new health facilities in the district and upgrading of existing ones to cater for the increasing population.

Figure 54: Households within 5Km Facility (%), Rural Urban

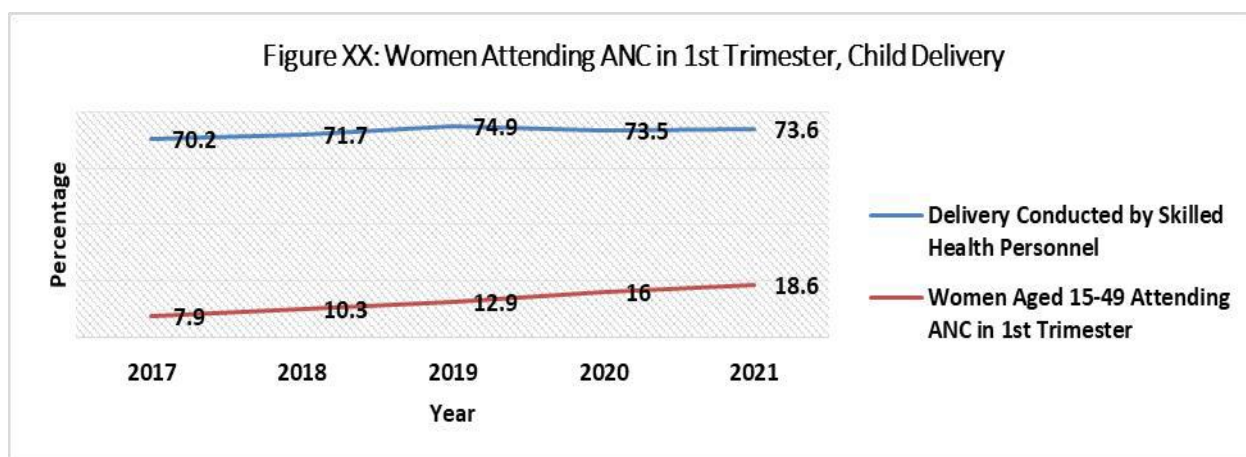

Source: KDHO, 2022

3.10.2.1.5 Provision of Health Care Services (Key Performance Indicators) 2.10.3.2.5.1

Women aged (15-49) Attending ANC in first trimester Vs Child Delivery

Access to proper medical attention immediately a woman falls pregnant can reduce the risk of complications and infections that may lead to death or serious illness of the mother or the baby. The figure below shows that only 18.6% of women age 15-49 attended ANC in first trimester of their pregnancy. Further, the figure shows that 73.6% of deliveries were conducted by skilled health personnel.

Figure 55: Women attending ANC in 1st Trimester, Child Delivery

Source: KDHO, 2022

3.10.2.1.6 Children fully immunized by age 12 Months

Universal immunisation of children against common vaccine-preventable diseases is key to reducing infant and child mortality. As at 2021, the district recorded 60.9% of fully immunized babies born alive. Although there was a reduction by 3% between 2020 and 2021.

Figure 56: Percentage of Children Fully Immunized

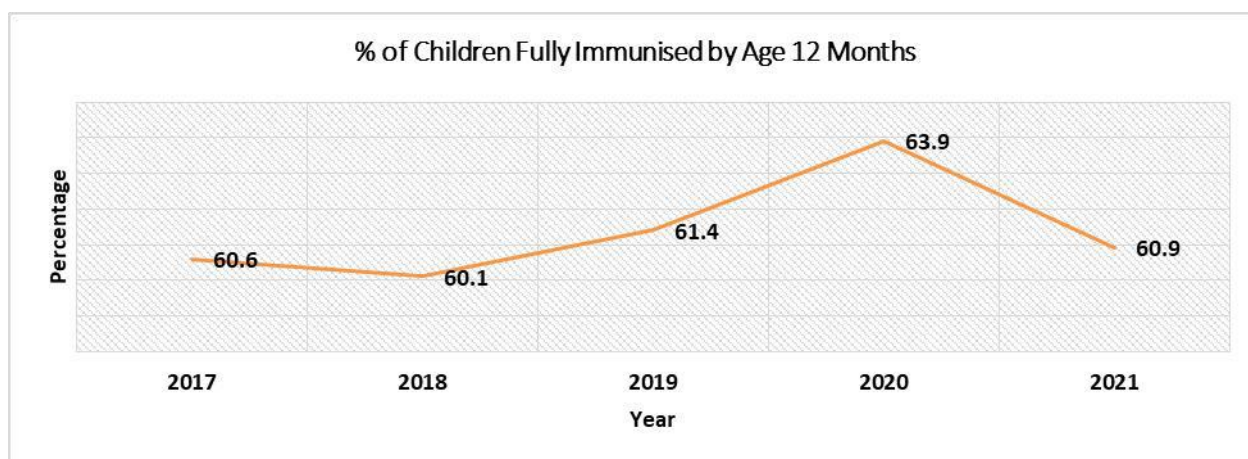

Figure 58: Percentage of Children Fully Immunized

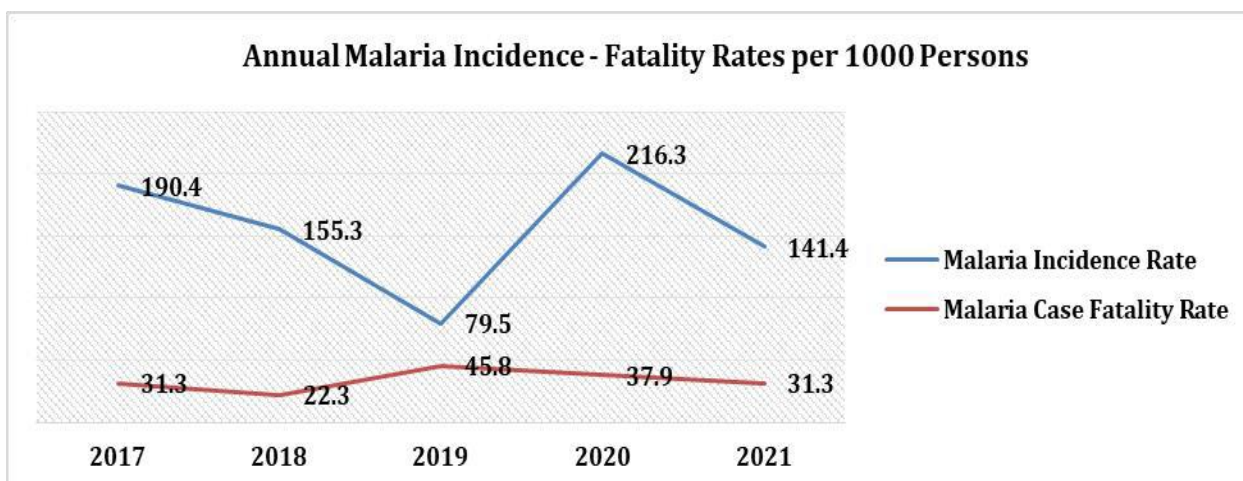

Source: KDHO, 2022

3.10.2.1.7 Disease Incidences in the district

3.10.2.1.7.1 Malaria Incidence - fatality Rate per 1000 Persons per Year

Figure 32 shows that, Malaria incidences in the district in 2021 was 141.4 per 1,000 persons per year. Whereas Malaria cases fatality rate stood 31.3% for the district. There was a reduction from 216.3 in 2020 to 141.3 in 2021.

Figure 57: Annual Malaria Incidence-Fatality Rates per 1000 Persons

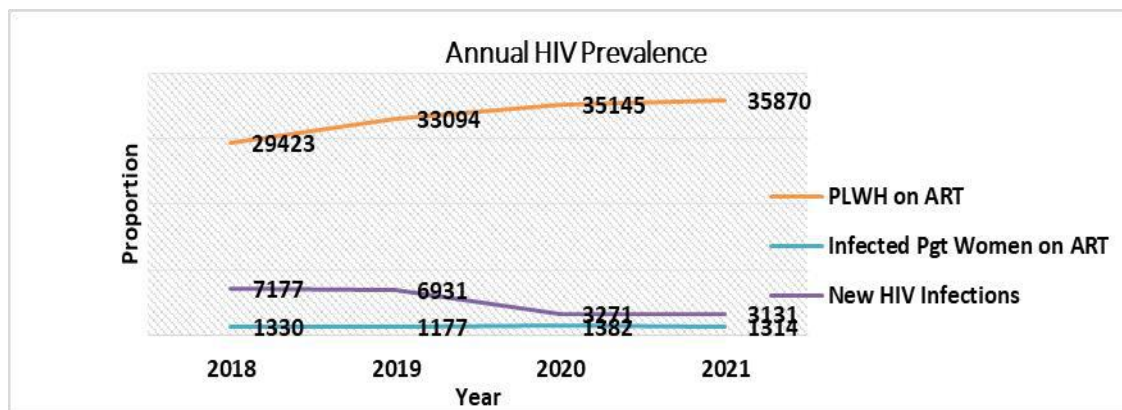

Source: KDHO, 2022

3.10.2.1.8 HIV Prevalence in the District

The proportion of the persons living with HIV and on ART stood at 35,870 while the number of infected pregnant women and were on ART was 3,131 in 2021. In term of new HIV infections, the district recorded 1,314 persons with new HIV during the same period.

Figure 58: Annual HIV Prevalence

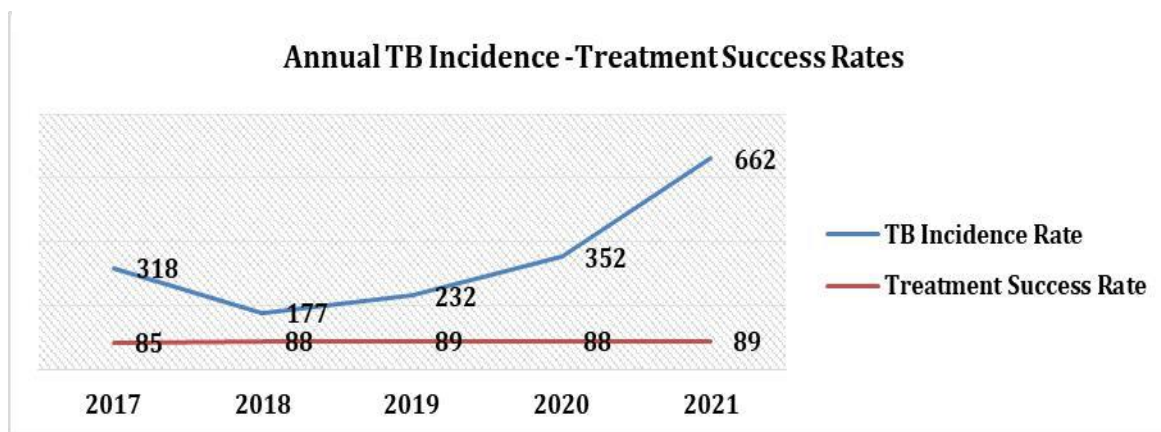

Source: KDHO, 2022

3.10.2.1.8.1 TB Incidence and Treatment Success Rate (new and relapse)

In terms of TB Incidence Rate per 100,000 Populations, the district recorded 662 cases of TB in 2021 showing a rising graph over the period of 3 years and the increase was huge from 352 in 2020 to 662 in 2021. The TB treatment rate (new and relapse) is almost constant over the period of 5 years.

Figure 59: Annual TB Incidence-Treatment Success Rates

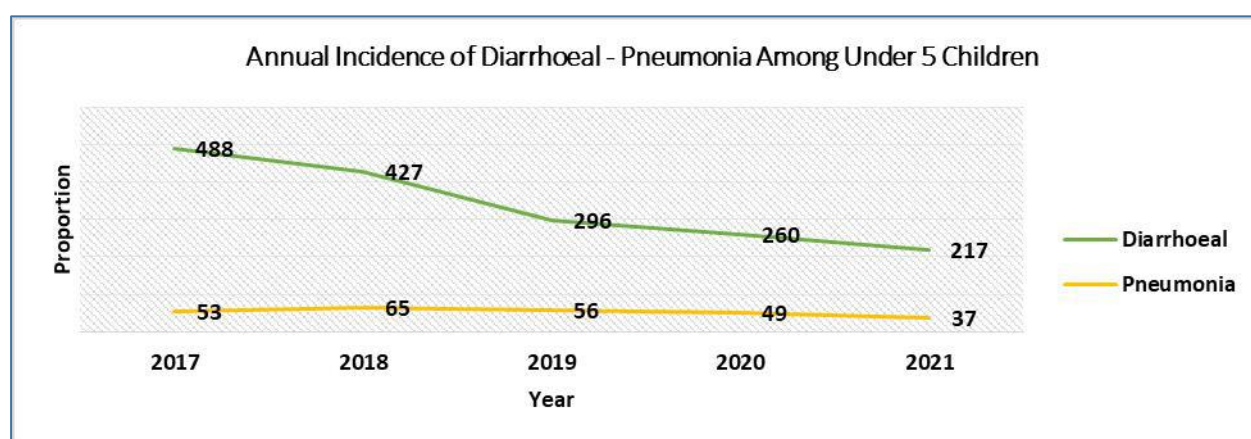

Source: KDHO, 2022

3.10.2.1.8.1.1 Incidence of diarrhea & Pneumonia Among under five children

Analysis of the Incidence of diarrhea & Pneumonia among under five children has shown a declining curves from 488 in 2017 to 217 in 2021 for diarrhea cases while the Number of Pneumonia cases has reduced from 53 in 2017 to 37 in 2021.

Figure 60: Annual Incidence of Diarrhoeal-Pneumonia Among Under 5 Children

Source: KDHO, 2022

3.10.2.1.8.1.2 Stunting, underweight and wasted among under five children

The issue of stunting, underweight and wasted among under five children still remains one of the District main challenge. The analysis shows that, of the total population of the children who were under 5 years in 2021; 0.45% were said to be stunted and underweight whereas 0.26 were said to be wasted.

Figure 61: Prevalence rate of Under 5 Children stunted, underweight & Wasted

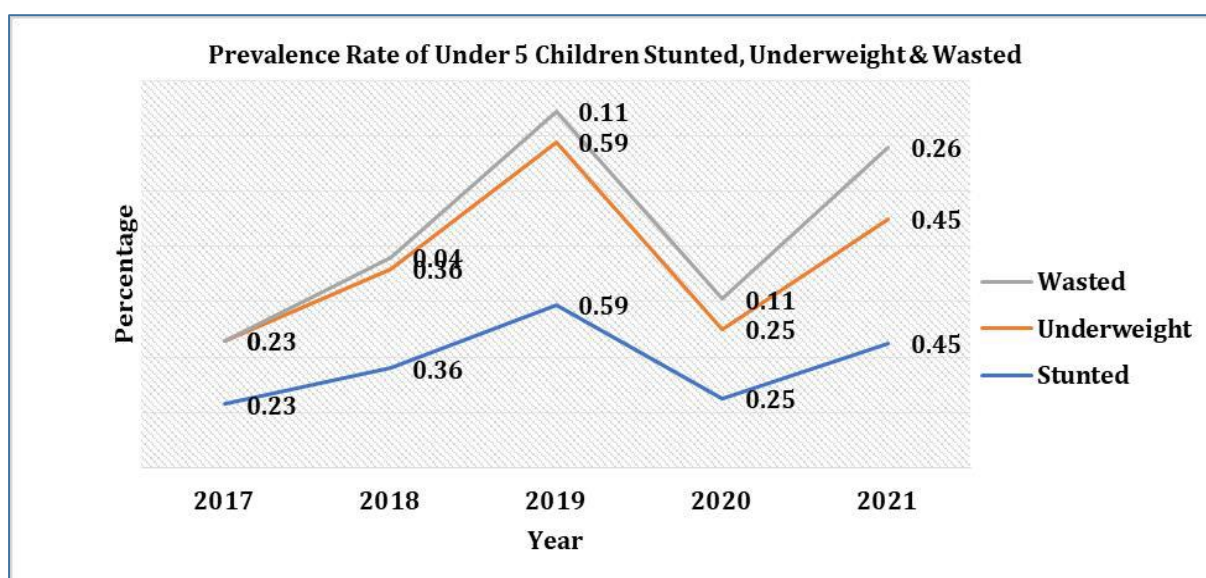

Figure 63: Prevalence rate of Under 5 children stunted, underweight & wasted

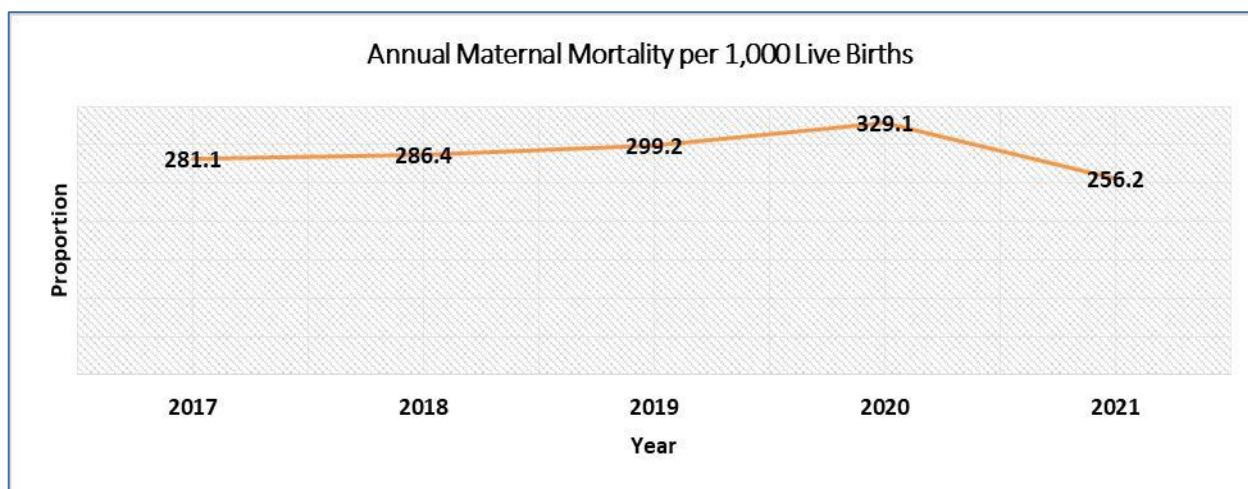

Source: KDHO, 2022

3.10.2.1.8.2 Incidences of Deaths

3.10.2.1.8.2.1 Maternal Mortality per 1,000 live births

Access to proper medical attention and hygienic conditions during delivery can reduce the risk of complications and infections that may lead to death or serious illness for the mother and/or baby. The national maternal mortality stands at 24 per 1000 live births. Meanwhile Kabwe district's maternal mortality is 256 deaths per year (21 deaths per month) per 1,000 live births.

Figure 62: Annual Maternity Mortality per 1,000 Live Births

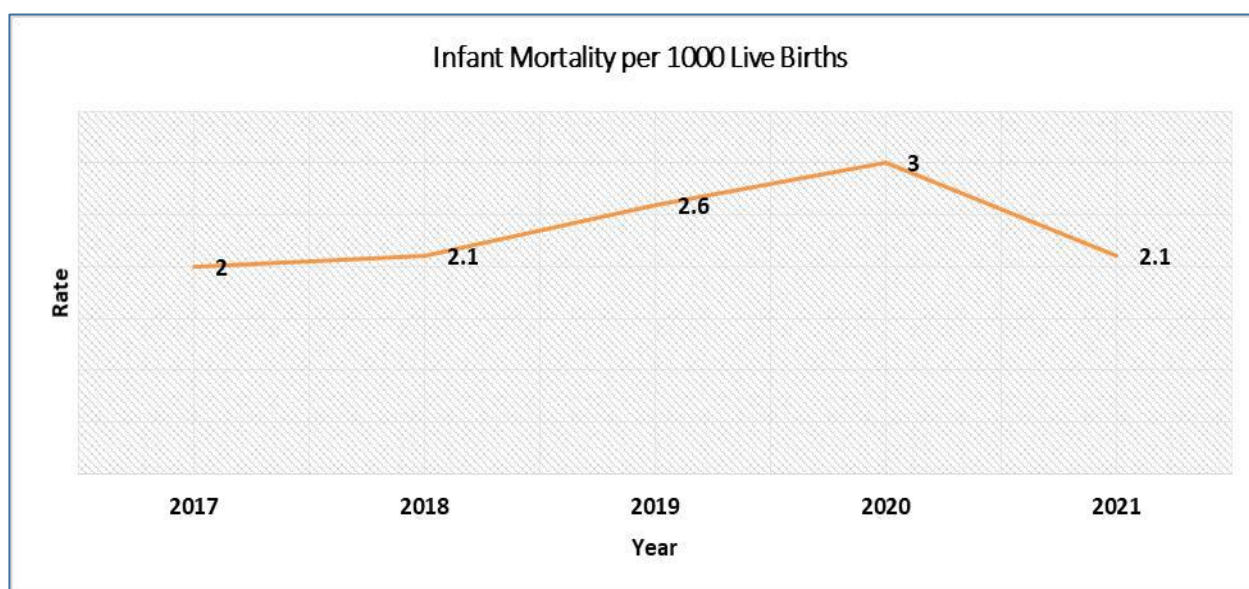

Source: KDHO, 2022

3.10.2.1.8.2.2 Infant Mortality per 1000 live births

The National Infant Mortality in 2021 was 1 per 1,000 live births. For Kabwe district, infant mortality was recorded to be 2.1 per 1,000 live births.

Figure 63: Infant Mortality Per 1000 Live Births

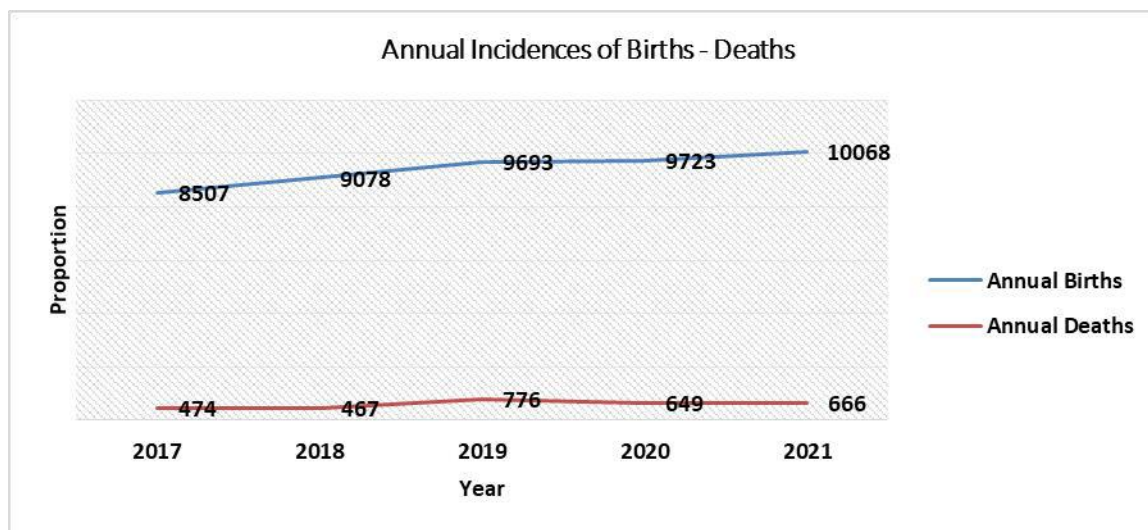

Source: KDHO, 2022

3.10.2.1.8.2.3 Incidence of Births – Deaths

The figure below shows that, in 2021 the district recorded a total number of 10,068 annual births to compare to 8,507 births in 2017. In term of annual deaths, the district recorded 666 annual deaths in 2021 compared to 474 deaths in 2017. It is observed that, as the district's births are increasing, deaths are increasing too.

Figure 64: Annual Incidences of Births-Deaths

Source: KDHO, 2022

3.10.2.1.8.3 Quality of Service Analysis

3.10.2.1.8.3.1 Establishment Analysis as at June, 2022

The National Health Policy of 2011, says that, the availability of sufficient number of skilled health staff with the right combination of skills is a significant determinant of the success of health services. In terms of the approved staff establishment of 1,127 for the district only about 821 positions are filled. Of this figure 5 are doctors against the population of 247,000. The standard Doctor to Patient ratio is 1:5000, however the district ratio stands at 1: 49,400.

This scenario implies that the district has a shortage of 44 doctors. The inadequacies in the current establishment makes it difficult to meet health workforce needs. The most affected are the rural areas, which do not have adequate capacities to attract and retain qualified health workers. This shortage of health workers is a major obstacle to the attainment of the national health priorities including health related Sustainable Development Goals.

Table 25: Establishment Analysis as at June, 2022

3.10.2.1.8.4 Road Network and Health Facilities

Except for Mine, Kabwe General hospitals and a few facilities within Kabwe town, all other health facilities are located in areas where the roads are poor, becoming impassable` during rainy season, thereby making delivery of essential drugs, and evacuating patients practically difficult. Satisfactory delivery of health care services depends on good road network and well organised transport system.

There is need to improve road network and transport management especially in rural wards in order to enhance the health care delivery system in the district.

3.10.2.1.8.5 Water Supply and Sanitation and Health facilities

Access to reliable, safe and clean water and sanitation is a challenge for most health facilities in the district. Even if some of the health facilities are serviced by boreholes, the district still faces growing challenges of borehole breakdowns, others drying up due to effects of climate change. There are also limited resources to repair the

broken-down boreholes which in turn impacting negatively on provision of quality health services.

It is true that, poor water supply and sanitation conditions are topmost contributors to the burden of disease and expose people to water-borne diseases. There is need therefore for the district to increase levels of access to clean and safe water and sanitation services for people especially in rural areas. This will entail allocating resources during the IDP period with careful consideration of special characteristics and attributes of the IDP areas taking into account disparities identified based on spatial and socio-economic data available.

3.10.2.1.9 Issues Arising from the Public Participation Process

The key problems highlighted during the public engagement include the long distances traveled by the majority of people in accessing medical services and the absence of medicines (drugs) in health posts, centers and hospitals, water and electricity. Given the district poverty index, a number of individuals above the average index could not afford to purchase medicines, leading to a rise in the mortality rate.

During the community meeting, the following were also submitted:

Table 26: Issues arising from public participation under the Health Sector

NEEDS	LOCATION
Lack of security	All health facilities
Lack of a Maternity wings	All health facilities
Lack of incinerator	All health facilities
Inadequate numbers of health workers	Peri-urban health facilities
Stunting, underweight and wasted among under five children	All health facilities
Poor road network	Peri-urban health facilities
Poor water supply and sanitation services	All health facilities
Inadequate medicines (drugs)	All health facilities
High maternal mortality rate.	All health facilities
High prevalence of HIV/AIDS	All health facilities
Lack of power supply	Peri-urban health facilities
Long distance to access health care	Peri-urban health facilities
Accessibility to health facilities by physically challenged people (Rumps)	All health facilities
Unavailability of Sign language interpreters	All health facilities
Transcribing of print to braille	All health facilities
Procurement of user friendly beds for physically challenged mothers(Maternity)	All health facilities
Lack of Transport	All health facilities

Lack of Accommodation	Peri-urban health posts
Lack of assistive devices for the persons with Disabilities	All health facilities
Lead Poisoning	Entire district
Lack of Mortuaries at Mini Hospitals	Mini Hospitals

3.10.2.1.10 Quality of Service at Health Facility

Quality of service provision to the communities in the wards was assessed and the summary is shown in the table below:

Table 27: Quality of the service at Health Facility

Ward	Facility Name	Type of Service			
		Electricity /Solar	Water	Road Network to Facility	Waste Management At Facility
Mpima	Bruneli Health Post	Electricity	Lukanga water supply	Gravel Road	Refuse Pit

3.10.3 Impact of Changes Anticipated Over the Next Ten Years

3.10.3.1 Population Change Vs Future Demand for Services and Facilities

According to 2022 Census of Population and Housing Preliminary Report of December 2022, Kabwe District had a total projected population of 299,206 inhabitants in 2022 with an annual geometric growth rate of 3.3%. While the district's population density stood at 190.6Km². On analysis for the span of 13 years, the district's Population is expected to grow from 299,206 in 2022 to 456,325 in 2035. This population growth will seriously impact the health sector. Alterations in age composition, internal migration, changes in population density and rural-urban movement will require adaptation of the health sector to solve the new problems.

At present, the health sector delivers its services to the local communities through 44 health facilities. However, with the projected surge in population, these facilities which are already not adequate will not adapt to the anticipated changes. In future, there will be need to construct more health facilities and upgrade some of them. The need for health facilities is line with government target of 1:5000 populations. With the projected increase of 286,418 additional populations by 2035, the district will require 13 more health facilities with supporting infrastructure for water and sanitation. Without these facilities in place, health care provision will be extremely strained.

3.10.3.2 The Impact of the Continuation of Existing Trends on Land Use and Population Distribution Patterns

The Impact of the continuation of existing trends in health sector growth will continue to see a concentration of the establishment of health facilities along the main roads to continue tracking population concentration when the facilities are

built. This is principally for the reason that inflow of people will continue to travel closer to hospitals to access health care services.

3.10.3.3 Environment and Climate Change Analysis

3.10.3.3.1 The Impact of Existing Trends on the Environment and Climate Change

In an effort to reduce the pollution of both ground and surface water originating from indiscriminate waste disposal, the health sector plays an important role to address of issues climate change. The Sector encourages a reduction in instances of open burning of waste that results in the release into the atmosphere of toxic gases.

3.10.4 Issues Arising Relating to Gender Groups and Vulnerable Groups

Women's low health status significantly constraints their capacity to provide for the health of their families. The high levels of HIV/AIDS among women is a sign that women are more threatened by the pandemic than men. Threats stalk from the fact that generally women have less control over their reproductive lives than men do. Traditionally, a married woman becomes more or less the property of the husband. A woman has little or no say in the sexual relationship. More so, the effects of poverty also persuade many young women into sexual relationships that expose them to HIV/AIDS infections.

3.10.4 Summary of the sector

The main problems affecting the sector include high mortality and morbidity rate subsequent from inadequate health facilities, under staffing in all health centres as well as shortages of drugs.

3.10.5 Consideration of the Underlying Factors Contributing to the Issues Identified

The major underlying factor contributing to the identified issues are not limited to inadequate health facilities and under staffing in most rural health centres. Moreover, lack of drugs has contributed to high levels of mortality rate, as most people in the rural areas are not able to afford buying drugs as prescribed by the doctors. Other factors include distance taken to access health facility, poor water supply and sanitation and lack of electricity and equipment at rural health facilities.

3.11 Community Development and Social Welfare

Community Development is Government's resolve and instrument to reduce poverty and vulnerability as well as economic inequalities through the provision of livelihood and empowerment interventions to individuals, families and communities, to realize the aspirations of the Vision 2030 and the Sustainable Development Goals (SDGs) among various strategic directions. The provisions of certain aspects of community development programmes in Zambia are governed by pieces of legislation, which provide legal framework and promote human rights such as the African Union policy framework, Universal Declaration of Human Rights, Declaration on Social Progress and Development and Convention on the Elimination of all forms of Discrimination Against Women and other International Instruments pertaining to the protection of people in communities. The district through the Department of Community Development is currently implementing community development programs under the three main policies, National Social protection policy, National Ageing policy and National policy on disability. To implement policy, Government through the Ministry of Community Development and social services and other stakeholder's community development enforces the provisions of the various laws, the main ones being:

- (a) Persons with Disabilities Act No. 6 of 2012;
- (b) Day Nurseries Act CAP 313;
- (c) Employment of Children and Young Persons Act CAP 274;
- (d) Anti -Gender Based Violence Act of 2009;
- (e) Anti- Human Trafficking Act; No. 1 of 2011; and
- (f) Non-Governmental Organizations Act No. 16 of 2009.

3.11.1 Key Government Priorities being and to implemented at Local Level

The district through the Department of Community Development is implementing socio economic empowerment program for the poor and vulnerable but viable households by supporting them with various Social Protection interventions to enhance their livelihoods for self-sustainability and poverty reduction.

Currently the district through the Department of Community development is working in the sub centers in all the twenty nine (29) wards of the district to provide. The centres are namely, Mukobeko, Muwowo, Mutwewansofu, Mpima, Kawama, Chindwin, Luansanse, Munga and Munyama Sub Centres. The table below shows the number of beneficiaries of the Food Security Pack from 2017 to 2021 segregated as follows;

Table 28: Number of Beneficiaries for the Food Security Pack Empowerment Program

Year	Number Of Beneficiaries	Male	Female	Youths	Persons With Disabilities
2017	350	104	246	39	13
2018	480	174	306	32	17
2019	310	101	209	22	12
2020	400	122	278	48	4
2021	2,200	669	1,531	305	39
Total	3,740	1,170	2,570	446	85

Source: Department of Community Development

3.11.1.1 Distribution of Inputs across the Sub Centres

The Table below shows the distribution inputs across the sub centres in the district.

Table 29: Distribution of Inputs across Sub Centres

SUB CENTRE	2017	2018	2019	2020	2021	TOTAL
Mpima	20	50	10	40	275	395
Munyama	70	80	50	60	255	515
Mutwewansofu	30	50	40	60	290	470
Mukobeko	30	50	50	50	255	435
Muwowo	20	30	30	30	220	330
Munga	70	80	40	40	220	450
Luansanse	70	80	50	60	290	550
Chindwin	20	30	10	30	245	335
Kawama	20	30	30	30	150	260
TOTAL	350	480	310	400	2,200	3740

Source: Community Development Department

The table above shows that there was an increase in the beneficiaries of the input support program from 350 in 2017 to 3740 in 2020.

3.11.1.2 Village Bank Programme

The Village Bank (Micro – credit Scheme) facilitates the provision of life and business skills and micro-credit to vulnerable women to enable them start and grow their businesses. This is as way of stimulating savings and financial inclusion at community level. The programme is implemented through a revolving fund scheme and is currently being implemented in 3 sub centres of the District, namely Mpima, Mukobeko (Makululu) and Muwowo Sub Centres. The programme in Kabwe District started in 2014. A total of 423 women have benefitted from the programme since 2017

with K295, 150 funds disbursed as loans and currently there are 103 women that have received loans amounting to K161, 500.

3.11.1.3 Support to Women's Club (Women Empowerment)

This programme is used in fostering skills and economic development through the promotion of group support which subsequently propels social economic growth. The programme thus provides a base for financing of Income Generating Activities (IGAs) that lead to increased productivity for various products such as agricultural and livestock products, crafts etc. This programme is implemented in all the 9 Sub Centres and in 2021. 31 groups were supported with grants in 2021.

3.11.1. 4 Social Cash Transfer

The Department of Social Welfare has been actively involved in implementing the Social Cash Transfer Program, targeting poor and vulnerable households within the district to mitigate intergenerational poverty. The program operates across 29 wards, benefiting approximately 10,766 clients. Of these, 7,062 beneficiaries receive payments digitally through various service providers: 4,810 through Airtel, 414 through MTN, and 1,838 through Zoon. Additionally, 3,072 beneficiaries are served by pay point managers – teachers, nurses, and clinicians specially trained to distribute cash at designated pay points. Financially, the program disburses K3,355,200.00 via digital payments and K1,761,600.00 through rural pay points. Overall, while the Social Cash Transfer Program has made significant strides in supporting vulnerable populations, logistical and infrastructural challenges hinder its full potential. Addressing these issues is crucial for enhancing the program's efficiency and impact.

3.11.1. 5 Public Welfare Assistance Program

Additionally, the Department of Social Welfare administers the Public Welfare Assistance Community program, though details about the key beneficiaries, specific aims, and total targets are less defined. This program suffers from inadequate funding, lack of awareness about eligibility, and overlap with the Social Cash Transfer Program, as some beneficiaries attempt to double-dip, causing strain on resources meant for broader assistance.

3.11.1. 5 Constituency Development Fund Empowerment and Bursary Programs

The District through the Local Authority implemented the Constituency Development Fund Empowerment Program by providing seed money in the form of grants to organized groups, clubs, and cooperatives, and loans to cooperatives and individuals with small and medium-scale businesses. Given that youths constitute a significant portion of the productive age group, the CDF Bursary program was implemented with the aim of enhancing job opportunities for youths in the district. From 2022-2023, the CDF supported 348 clubs, cooperatives, and organized groups, and provided skills development bursaries to about 1,500 students.

3.11.1.4 Description of the Existing State of Development

Despite the strides made to address poverty and vulnerability reduction in the district, through provision of food security packs and empowerment programs, the district is still unable to access some of the intended beneficiaries due to inadequate manpower and transport challenges faced community department. Currently the department has no motorbike to access areas where motor vehicle cannot reach. Furthermore, the Departments responsible have inadequate man power where one officer is expected to cover 16km. Beneficiaries struggle with illiteracy, affecting their ability to withdraw and access funds. Delays in creating Airtel wallets for failed payments, poor communication systems, network issues, limited phones for rural payments, and inadequate transportation resources further complicate implementation. Frequent SIM card changes by beneficiaries, along with the risk of fraud against the blind and elderly, add to the program's difficulties.

3.11.1.4 Issues arising from Public Participation

The issues arising from the public participation revealed that the district is faced with high poverty and youth unemployment levels. This was more prominent in peri urban areas of the district such as Zambezi, Chililalila, Moomba and David Ramusho. See attached Appendix for a detailed analysis of the issues and concerns raised segregated by wards.

3.12 Housing and Human settlement

The housing and human thematic area focuses on the core issues relating to land management and administration and housing.

3.12.1 Land Management and Administration

Access to land means an opportunity to earn a decent income and achieve food and nutrition security. It also paves way for access to social benefits such as health care and education. A lack of secure land access, on the other hand, can disempower people and expose them to the combined threats of poverty, hunger and conflict. The Local Authority is faced with a challenge of ensuring equitable access to land for its citizens. One of the foremost hurdles is the scarcity of available land, exacerbated by rapid population growth and urbanization which has contributed to growth of informal settlements in the district. The Local Authority in partnership with the Ministry of Lands and Natural Resources and other Non- Governmental Organizations is implementing the following programs aimed at addressing land insecurity in the district;

3.12.1.1 Key Government Priorities being and to be implemented at local level

3.12.1.1.1 The National Land Titling Program

The Government in collaboration with MEDICI Land Governance has rolled out to the district the National Land Titling program to empower citizens living in improvement areas with security of tenure through issuance of certificates of title. At the time of the IDP preparation the Ministry of Local Government had issued about 2000 certificates of title to property owners in Makululu, Magandanyama, Nakoli, Katonodo, Kawama, Kamushanga, C-Gate, Kakumbi and Kaputula improvement areas.

3.12.1.2 Description of the Existing State of Development

3.12.1.2.1 Availability of Service Including Key Indicators of Performance

Kabwe is predominantly a farming district, with land approximately 130,834.064265 hectares in the hands of farmers and inadequate land for development has made it very difficult for the Local Authority to address land scarcity in the district. Improved access to land remains a high priority for the District, in order to restore the dignity of the poor people and to provide them with proper shelter as enshrined in the Constitution of Zambia. The biggest challenge however is that the demand for land is ever increasing attributed mainly to urbanization. In an effort to improve access to land and to address the increased demand for land the Government in 2019 through Statutory instrument No.173 excised the Kabwe National Forest No. 31 with the intention of expanding the township.

3.12.1.3 Issues Arising from the Public Participation Process

The public participation process revealed challenges in the management and administration of land in relation to the bureaucratic procedures in the land allocation process, which made it difficult for the vulnerable and the poor to access land in district. The report revealed that there was an increase in illegal land allocation in the district which was prominent in informal settlements such as Kawama, Makululu, Katondo. The report further revealed that there was an increase in encroachments on water infrastructure such as the Lukanga well field. The table below is a summary of the issues raised from the public participation process;

Table 30: Summary of issues and concerns raised from the Public Participation Process

S/N	Issues Raised	Ward Affected
1.	Encroachments on Lukanga Water and Sanitation infrastructure e.g Kalulu-Mukobeko Well field, Makululu well field, Natuseko Ponds, Katondo Ponds, Bwacha West Ponds	• Kawama • Katondo • Makululu • Bwacha
2.	Illegal land allocations	• Makululu
3	Bureaucracy in land allocation by the Local Authority	• All Wards
4	Lack of Security of tenure e. g Chikwata area	• Chimanimani • Kangomba • Muwowo East
5	Proliferation of informal settlements	

3.12.1.4 Impact of Changes Anticipated Over the Next Ten Years

3.12.1.4.1 Population Change on the Future Demand for services and Facilities

The projected population growth for the IDP area from 299,206 in 2022 to 456,325 in 2035 depicts a surge in demand for land its competing uses. This has been evidenced by the number of applications for land ownership received in relation to the available plots advertised, land conflicts and encroachments on ecological sensitive areas. For instance, the Local Authority from 2010 to 2022 received a total number of 12,473 applications for land in comparison to the 3720 plots that were advertised.

The table shows the number of applications received for land in comparison to available plots.

Table 31: Number of Applications for land in comparison to the plots advertised

Year	Plots advertised	Applications Received
2010	1800	7712
2014	500	1000
2017	900	2,378
2018	20	300
2022	500	1083
Total	3720	12,473

Source: KMC, 2022

Land is an important factor for production and development. All activities are undertaken on land this implies that the projected population growth of the district will accentuate demand on service provision in all sectors to meet the growing population. This will entail the need to increase education, health, housing infrastructure to match the needs of the population.

3.12.1.4.2 Existing and Proposed Investment and Development Program

Land is an important resource for investment, production of goods and services in the economy, wealth creation and ultimately poverty reduction. To overcome the anticipated challenges the IDP will focus on strengthening the institutional capacity of the Local Authority which has been mandated by the URP Act, Land Act of 1995, the Land Policy and Land Administrative Circular No.1 of 2015 to administer and alienate land. Focus will be on investment in establishing functional GIS unit that will undertake land mapping exercise in order to foster an integrated land management system.

3.12.1.4.3 Existing Trends on Population and Settlements

The demographic analysis denotes that about 70% of the projected population growth will be absorbed by the informal settlements and the increase in demand for land will lead to more proliferation of informal settlements in the district. The increase in demand for land and the inability of the Local Authority to meet its demand will entail an increase in the informal settlements around the fringes of the urban core of the district. As a planning authority, the Local Authority in the IDP area, has a huge responsibility of upgrading existing unplanned settlements. The predominant land use for the district as depicted by the land use map is agrarian land, it is therefore anticipated that that the projected population growth will result

into an increase in zonal use change particularly from agriculture to mixed development in and creation of growth nodes in order to meet the high demand for various land uses.

3.12.1.4.4 Environment and Climate Change

Demand for land in the district has been increasing as evidenced by applications for land and encroachments in environmentally sensitive areas such as aquifers and forest reserves. According to the Kabwe State of Environment Outlook report the district experienced an increase in the levels of encroachment in the forest reserves from 5% in 2010 to 65% in 2019 which was attributed to extension of agriculture land and settlements amongst others. The excision of Kabwe National Forest Reserve to curb the demand for land in the district partly contributed to loss of forest surface area of the district which accounted for 9.49 percent of the total district surface area between 2010 and 2018 and 8.25 percent in 2019. It can further be deduced that conversion of land use will entail clearing of large tracts of land for development which may affect the environment due to loss of biodiversity in order to pave way for infrastructure development.

3.12.1.4.5 Issues Relating and Arising to Gender and Vulnerable groups

The land policy requires that 30% allocation of land is allocated to women while 20% and 10% be allocated to youths and persons with disabilities respectively. However, access to land by women, youths and persons with disabilities remains a challenge for the IDP area. The land allocation in 2017 depicted only 18% of women were allocated land whereas only 3% of persons with disabilities acquired land. To increase access to land and to create a conducive environment for good governance, focus will be on sensitization on the policies and legal frameworks that promotes access to land by the marginalized and vulnerable groups and adherence by the Local Authority to these pieces of legislature employed. The table below shows the percentage distribution of land that was allocated by the Council in 2017 classified as follows:

Table 32: percentage of various categories of people that accessed land

Ownership of land	Category
Women	18%
Men	72%
Youths	7%
Persons with Disabilities	3%
KMC, 2023	

3.12.2 Housing

Shelter is not only a basic human requirement but a human right too. With the increase in the economic and social activities the Kabwe has witnessed over the years, the district has experienced an increased pressure on the supply of housing unit for the general populace. As a result of housing deficits, the occurrence of unplanned settlements continues to be a major development issue for the district. Generally the growth of Kabwe is mainly absorbed by the informal settlements given the low supply of formal low cost housing as well as serviced land. Unplanned settlements are estimated to be around 14 in the district⁶. Moreover, unauthorized settlements have occupied about more than half of the land intended for residential development. The population living in unplanned settlements is more than half of the district's projected total population of 247,241 as at 2022. Thus, informal housing features are prominent on the new housing development areas of the town. In fact, it was estimated in 2020 that, informal housing would use up to about 1,017 hectares of land as compared to 355 hectares by formal low-cost housing, medium and high-cost housing combined⁷

3.12.2.1 Key Government Priorities Being and to Implemented at Local Level

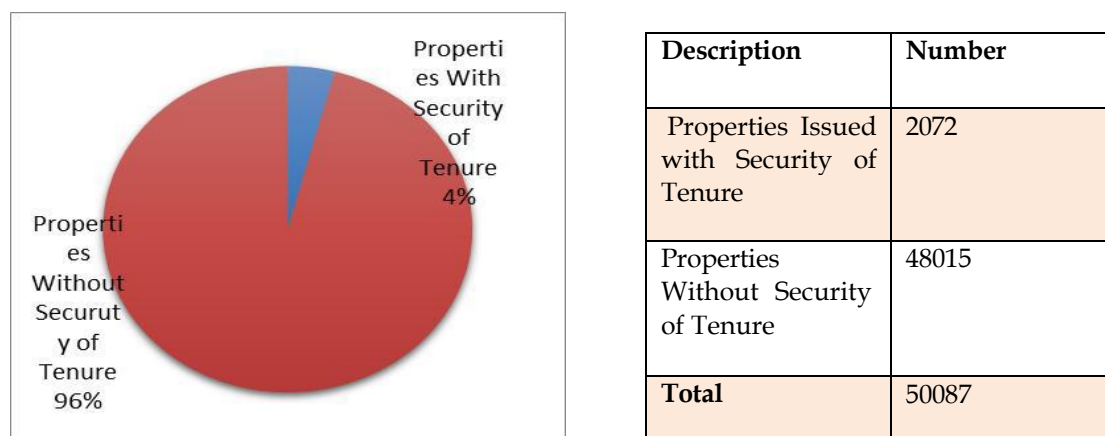

In an effort to meet the rising demand for housing and accommodation amidst the growing population the Government has opened up land for housing development in the new Mpima area in supplementing these efforts, the district is also working with Medeem Zambia and Habitat for Humanity Zambia to upgrade housing units and issuance of Occupancy Licences in 14 improvement settlement area. These unplanned settlements include; Makululu the largest unplanned settlement in Sub Saharan Africa, Nakoli, Katondo, Kamuchanga, Kamushanga, Kawama, Kaputula, C-Gate Abdul, Shamabanse, Kawama, Makwati. Through the upgrading program, the following has been achieved;

3.12.2.1.1 Number of Properties Registered and Issued with Occupancy Licenses in informal settlements

Since the upgrading program was initiated in 2017, only 7933 (33%) properties have been registered out of the 50,087 captured and only 2072 (4%) of property owners have successfully registered, applied and secured a thirty (30) year tenure of their properties. This entails that only 4% can have access to social benefits such as health

care, education, electricity and water. The figure below shows the number of properties registered and issued with occupancy licenses in the informal settlements.

Figure 65: Analysis of Land Tenure (Issuance of Occupancy Licenses)

Source: Kabwe Municipal Council Records, 2021

3.12.2.1.1 Number of Registered Properties in each informal settlement

Table above shows that, Makululu settlement has the highest number of people who have acquired Occupancy Licenses. This is because the Local Authority has been working with Habitat for Humanity Zambia to help settlers secure their properties by getting Occupancy Licences. Habitat for Humanity Zambia has managed to build 150 decent housing units for underprivileged people in Makululu Compound.

Table 33: Registered Properties by Settlement

Name Of Settlement	Total Number of Properties	Number Of Registered Properties	Number Of Unregistered Properties	Number Of Applications for Licenses	Number Of Occupancy Licenses Issued	Number of None processed License
Waya	3570	558	3012	333	232	101
Kaputula	2488	909	1579	195	106	89
Kakumbi	3520	52	3468	33	25	8
Nakoli	3077	433	2644	99	59	40
Shamabanse	3069	89	2980	35	24	11
Kawama	3123	1393	1730	565	348	217
Makululu	8140	1617	6523	714	495	219
C-Gate	2488	387	2101	263	233	30
Katondo	7564	1236	6328	473	208	265
Makwati	3508	164	3344	70	60	10
Kamushanga	3514	443	3071	101	72	29
Maipambe	1558	322	1236	177	87	90
Kamuchanga	2112	100	2012	24	13	11
Magandanyama	2356	250	2106	115	99	16
Total	50,087	7933	42134	3229	2072	1157

Source: KMC,2020

3.12.2.2 Description of the Existing State

3.12.2.2.1 Quality of Housing

The provision of affordable housing units remains a high priority in order to restore the dignity of poor people and provide them with proper shelter as enshrined in the Constitution of Zambia. The biggest challenge is that the demand for housing is ever increasing and vastly outgrows the funding resources that are available. This is mainly because of ever increasing population due to high rate of fertility and migration.

⁶ Kabwe Municipal Council, 2022

⁷ GRZ/ADB, 2002

In terms of the quality of housing units in the district however, residents have built their houses using both the permanent and conventional building materials. Approximately, over 75% of the houses have been built using temporal materials especially those allocated in the informal settlements and rural parts of the district. The building materials used include wood, grass and mud.

On the other hand, the permanent structures have mostly been built using molded bricks from the anti-hills. Nevertheless, in recent past, the district has also witnessed increased use of concrete blocks for construction of houses especially in urban areas. It is worth noting that, most of the households within rural wards are not receiving utility services such as piped water and electricity. Whereas, the road network to service these households is generally in a poor state.

3.12.2.3 Environment and Climate Change

The majority of the developers in the district make use of conventional building materials such as clay bricks to build houses. This involves the use of soil from the anthills. This activity in itself has a high likelihood of impacting on the environment negatively as it has great potential to change the topology and land scape of the district. Moreover, the use of timber in the construction industry also poses a serious threat to the forest reserves as well as natural vegetation which can result into deforestation. And so, damage to the vegetation and forest reserves may result into poor rainy patterns and global warming as the case is now.

3.12.2.4 Issues Arising Relating to Gender Groups and Vulnerable Groups

It is generally argued in the African tradition setting that, a man is the head of the household. Therefore, traditionally home (house) ownership is perceived as a preserve of man. Apart from that, vulnerable groups including women generally have limited access to financial resources to buy land and construct housing units or buy existing housing unit. The district will therefore endeavour to give women and differently abled persons first priority when it comes to land administration as enshrined in the Land Policy.

3.13.1 Municipal Parks and Recreation

Parks and recreation is a valuable investment for the district with a vast array of health benefits for the people. They provide opportunities for residents to be active and to interact with other people. Community facilities have always proved to be a very effective vehicle for social cohesion and integration of communities across the spectrum of society.

3.13.1.1 *Key Government Priorities Being implemented and to implemented at local level*

The Local Authority has prioritized the promotion of municipal parks and recreation through key initiatives such as allocating budgets for park development and maintenance, rehabilitation and modernizing of existing facilities. During the IDP preparation the Local Authority had embarked on the rehabilitation of Clayton Park located in Luangwa ward as well as the construction of changing rooms at Indeni grounds in Makululu ward.

3.13.1.2 Description of the Existing State

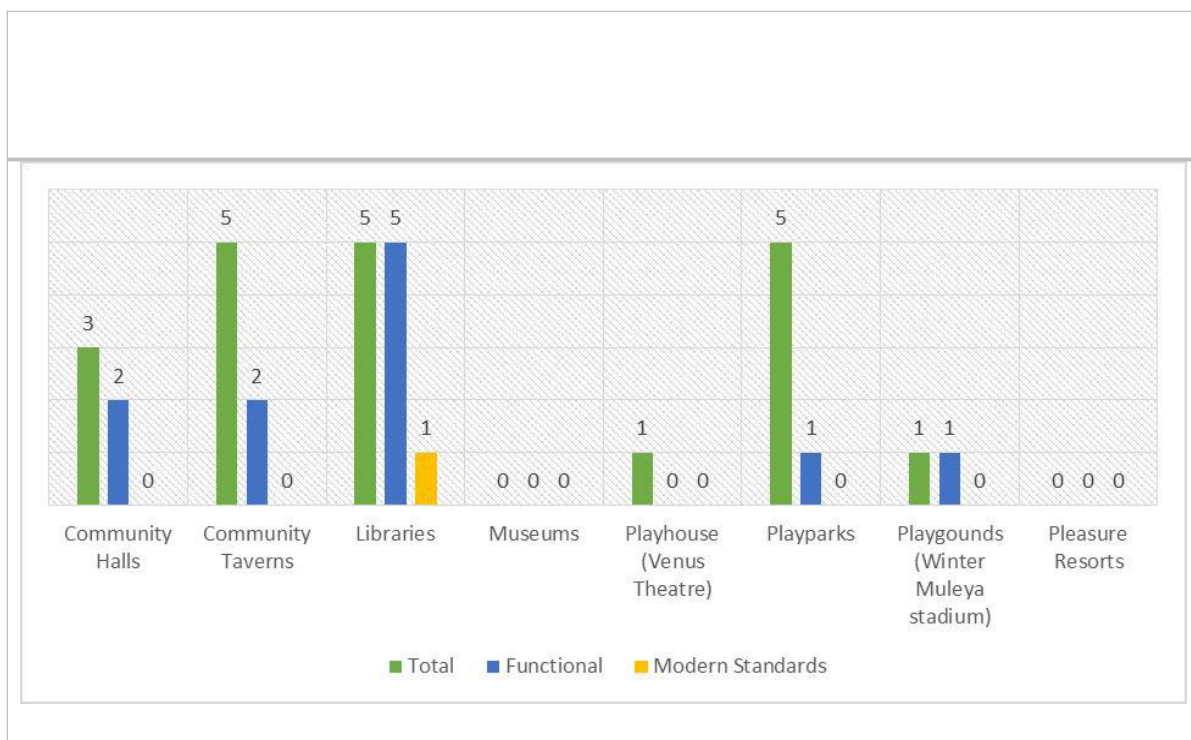

3.13.1.2.1 Number of Community Facilities in the district

Kabwe is one of the districts in the Zambian history to have produced football players in the of name of Godfrey (Ucar) Chitalu that have shaped Zambian football and has produced most influential music artists in the names of B Flow and Yo Maps that have helped to put Zambia on the world map with regards music industry.

However, with such rich contribution to sports and music industry space, the district lacks modern sports and recreation facilities such as stadia and auditorium. Most of the district's sports (Winter Muleya Stadium) and recreation (Venus Theatre) facilities were built in the 1950s. These facilities have outlived their life span and do not meet modern standards.

Moreover, despite being home to world's eminent discovery in the name of **BROKEN HILL MAN**, the district could not house this famous human fossil not even replica due to lack of Museums. The Skull of **BROKEN HILL MAN** currently resides at the London's Museum of Natural History and the archive for Zambia Consolidated Copper Mines-Investments Holdings (ZCCM-IH) on Ndola's Arusha Street has a replica (allAfrica.com). Figure 83 shows the number of existing community facilities in the district.

Figure 66: Analysis of Existing Community Facilities in the District

Source: Kabwe Municipal Council Records, 2021

3.13.1.3 Issues Arising from the Public Participation process

During the public consultation process, it was pointed out that the district lacked modern sports and recreation facilities. The available recreational facilities were in a deplorable condition such as the Winter Muleya stadium and the Venus theatre. Further, the district did lacked museums to house world-renowned discoveries like the Broken Hill Man fossil.

3.13.1.4 Impact of Changes Anticipated over the next ten Years

Analysis on 25-year span (2010-2035) shows that by 2035, population in the age groups (0-14) and (15-65) will increase by 41.5%. The implications for this increase is that, demand for public social amenities facilities will increase as well and existing facilities will not meet this change in demand.

3.14. Water and Sanitation

Access to water and sanitation services is a key component of all aspects of sustainable development by all segments of the population with the projected population growth. This will demand for an increase in access to clean and safe

water and sanitation services for people both in rural and urban areas.

3.14.1 Key Government Priorities Being and to Be Implemented at A Local Level

Poor water supply and sanitation conditions are major contributors of water-borne diseases and related illnesses. Therefore, strategies to improve water supply and sanitation services will be intensified in the District with key priorities given to water quality monitoring, water supply and sanitation promotion, water supply and sanitation infrastructure development, enhancing stakeholders' involvement, sustainable operations and maintenance improvement.

3.14.1.1 Description of the Existing State of Development

3.14.1.1.1 Availability of Service

Water resources play a key role as an engine and catalyst for socio-economic development supporting sectors such as industry, agriculture, fisheries and forestry. Clean drinking water, hygiene and sanitation are important in maintaining a healthy community. Availability and access to water resources has been affected by population growth, urbanization and demand for water to support various uses in the district such as agriculture and industry. Major sources of water in Kabwe include Tap water, Boreholes, and protected Wells. Water in the District is mainly supplied by Lukanga Water and Sanitation.

3.14.1.1.2 Water Supply

The National standards demand that water point should be accessed within 500m radius of each household. Water in the urban area is being supplied through the water reticulation system by Lukanga Water and Sanitation Company (LWSC), few boreholes and protected Wells. In rural areas of Kabwe water is being supplied through drilled boreholes, and protected Wells. A total number 19829, households are connected to the Lukanga Water and Sanitation company water network.

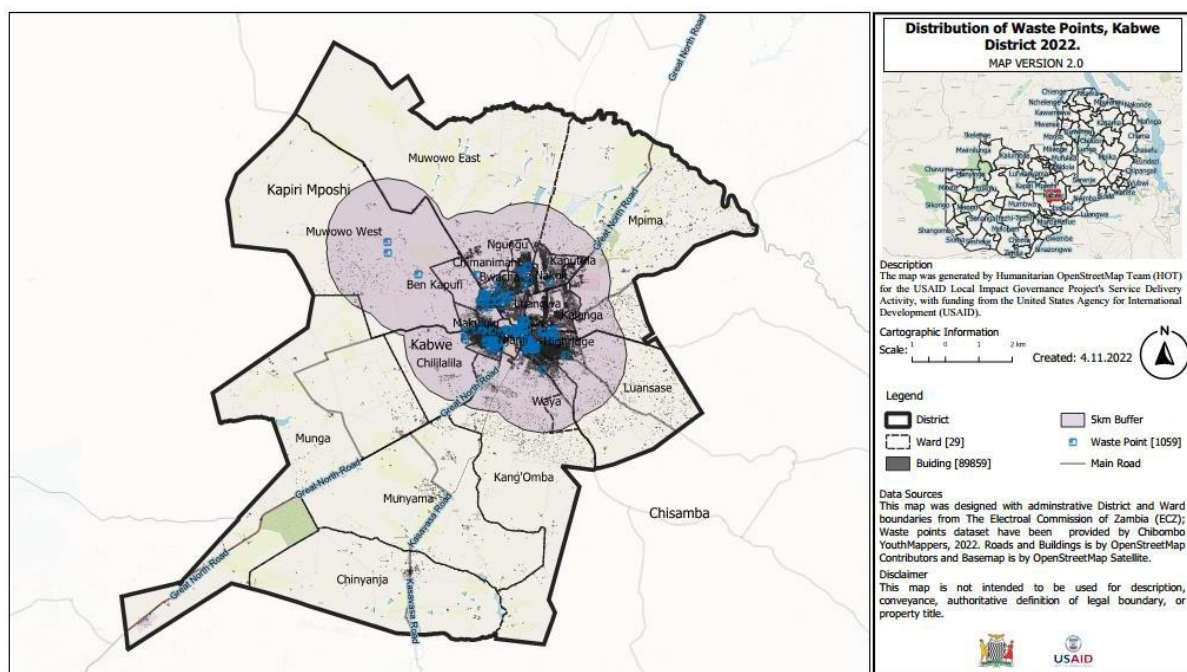

Approximately seventy (70) percent of the population have access to safe and clean water, this entails that thirty percent (30%) of the Districts population lacks access to safe and clean water. Water availability is the amount of water that can be used for

human purposes and for the well-being of the environment without significant harm to the ecosystem. Both ground and surface are major sources of water in the district. An estimated 70 percent of water supply is abstracted from ground water at Kalulu Wellfield whilst 30 percent is from Brunelli Dam. There has been a reduction in the available ground water abstracted by Lukanga Water sanitation from approximately 1,000,7000 to 700,000 m³ per annum from 2015 to 2020 which is attributed mainly to high levels of encroachment on the aquifers. The District is faced with a challenge of erratic water supply due to inadequate and dilapidated water infrastructure for Lukanga Water and Sanitation Company Lukanga.

The surface water potential for Kabwe District is estimated at 345 700m³ per day while the potential for ground water is 744,012m³ per day (YEC, 1995). Based on permitted volumes by WARMA, it is estimated that the water that was allocated for agriculture was 120,310m³ per day while 58,000m³ was allocated for domestic and industrial uses (WARMA, 2020).

The figure below shows the distribution of water points in the district.

Figure 67: Distribution of water Points in the District

Source: KMC, 2022

The spatial analysis of the water distribution points shown above implies that these are more concentrated in the urban area and sparsely in the rural parts of the District such as Munyama, Chinyanja, Munga Muwowo East and West. This entails the community in the aforesaid areas have limited to access to safe and clean water within the recommended 500m radius.

3.14.1.1.3 Sanitation Situation

In the township and peri-urban areas, provision of the sanitation system is the responsibility of the Lukanga Water Supply and Sanitation Company (LWSC), with some areas using onsite sanitation, which includes Septic Tanks, VIP toilets and improve latrines. Most of the households in unplanned settlements are still using pit latrines, hence increasing ground water contamination in such areas.

To improve sanitation in the district, Lukanga Water Supply and Sanitation Company (LGWSC) in collaboration with stakeholders such as KMC and SNV have been desludging onsite sanitation facilities. To assist the community, Kabwe Municipal Council developed and has been providing approved designs for onsite sanitation for use in both low- and high-density areas. To compliment these efforts, advocacy through community led total sanitation programmes, training of community desludging teams and improving sanitary accommodation in markets have been undertaken.

3.14.2 Quality of Service Including Key Indicators of Performance

Sanitation infrastructure in the district remained largely the same whilst the population has been increasing. The sewerage network and number of waste water treatment plants have remained at constant despite population increase. This has resulted in an increase in the number of people using onsite sanitation facilities. The percentage of the population using onsite sanitation increased from 24 percent in 2010 to 53 percent in 2019.

The impacts arising from using poorly constructed onsite sanitation facilities include potential to contaminate ground water and increasing the risk of water borne diseases. It can be noted that the incidences of diarrhoea (non-bloody) continued to rise from 27,684 in 2010, 43,018 in 2015 and 48,350 in 2018 as indicated in the table below:

Table 34: Cases of Water-Borne Diseases from 2010-2019

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019
Diarrhoea (Non-bloody)	27,684	28,197	36,372	39,125	43,214	43,018	47,094	54,508	48,350	37,306

Ministry of Health (2020), Kabwe District Health Office Administrative Report

(Unpublished), NWASCO Annual Reports 2011 – 2021

3.14.3 Issues Arising from the Public Participation Process

Submissions from the communities indicated that access to clean and safe water

supply and sanitation remains a challenge in some parts of the District especially in peri-urban and rural areas. Households in urban areas had more access to improved sources of drinking water compared to peri-urban and rural areas. Despite this improvement, a lot of complaints about pipe leakages have been recorded in some parts of the Townships such as Katondo and others, risking water contamination. Most of the communities in the rural wards had water point constructed over the 500m radius.

The distances to water sources are affecting especially women and girls who are traditionally believed to be the providers of water at home for various uses. Women and girls have to walk long distances to look for clean and safe water making them vulnerable and compromise on hygiene. However, an improvement in the water supply system especially for the urban area, and some parts of the rural areas with drilled boreholes with the support from SUN TA, SNV, CDF has helped alleviate the burden on women and girls traveling long distances to access clean and healthy drinking water. The Local Authority is urged to drill more boreholes and schemes in communities that are still facing the safe water challenge.

In rural parts of the District some villages have reported to still have households that are practicing open defecation because of lack of toilet facilities. The Local Authority in working with SUN TA, SNV are urged to intensify sensitization programs and enforcements in peri-urban and rural areas and ensure that the whole District is Open Defecation Free. Open defecation contaminates surface and ground water causing water-borne diseases such diarrhea.

3.14.4 Impact of the Continuation of Existing Trends on Population and Settlements

With population growth, the demand for water also increases. Submissions from the communities indicated that access to clean and safe water supply and sanitation remains a challenge in some parts of the District especially in peri-urban and rural areas. Households in urban areas had more access to improved sources of drinking water compared to peri-urban and rural areas. With population growth and increase in urbanization, the current water supply and sanitation services are expected to be inadequate for there will be more demand to this.

Therefore, there is need to provide more safe and clean water points in rural, peri-urban and urban areas of the District. Sector budgeting towards improvement of water supply and sanitation in the District must be increased. Investing in efforts that slow the rates of population growth through increasing access to voluntary family planning services can help ensure that ample water is available for food production, ecosystem health, and political and social stability.

3.14.5 Impact on the Environment and Climate Change

Villages that are still cutting down trees for charcoal burning negatively affect the environment and contribute to climate change. Rain pattern is affected, and surface water levels affected. Despite an improvement in urban, a lot of complaints about pipe leakages have been recorded in some parts of the Townships such as Katondo and others, risking water contamination. This could be a source of water borne diseases. Villages that are still practicing open defecation contaminate surface and ground water, with onsite sanitation also affecting ground water.

3.14.6 Impact on Gender and Vulnerable Groups

Most of the communities in the rural wards had water point constructed over the 500m radius. The distances to water sources are affecting especially women and girls who are traditionally believed to be the providers of water at home for various uses. Women and girls have to walk long distances to look for clean and safe water making them vulnerable and compromise on hygiene.

However, an improvement in the water supply system especially for the urban area, and some parts of the rural areas with drilled boreholes with the support from SUN TA, SNV, CDF has helped alleviate the burden on women and girls traveling long distances to access clean and healthy drinking water. The district envisages to drill more boreholes and schemes in communities that are still facing the safe water challenge.

In rural parts of the District some villages have reported to still have households that are practicing open defecation because of lack of toilet facilities. The district through a collaborative approach with the Local Authority, SUN TA, SNV is committed to intensify sensitization programs and enforcements in peri-urban and rural areas and ensure that the whole District is Open Defecation Free. Open defecation contaminates surface and ground water causing water-borne diseases such diarrhea.

3.14.7 Summary for the sector

The core problem affecting Water and Sanitation Sector is inadequate clean and safe water supply for domestic and agricultural use in the district especially in rural areas and inadequate sanitary facilities leading to contamination of water sources. This is resulting from unequal distribution of water resource infrastructure, a situation contributing to poor sanitation levels and increase in poverty levels.

Below is a summary of core issues on water and sanitation in the district.

	Core issue	Affected Ward/Location
1	Limited access to clean and safe water in the rural and peri urban parts of the District.	All peri urban/rural wards
2	Poor sanitation (some communities still practice open defecation).	Peri urban/rural wards

3.14.8 Consideration of the Underlying Factors Contributing to the Issues Identified

The underlying factor contributing to the identified Issues is mainly the lack of spatial analysis in the distribution of water points such as boreholes in rural areas. This has caused biased drilling and installation of boreholes in the rural parts of the district. In the urban area it's the inadequate resources by the water utility to expand the current network.

3.15 Environmental Sector

3.15.1 Forest

Forest reserves play a protective and a productive role. They are recharge zones of underground water aquifers and encompass water catchment areas and sources of rivers and streams that play an important part in water supply and hydroelectricity generation. They also provide wood and non- wood forest products to local communities. Government is keen to promote the stewardship and use of the forests and forest lands in a way and at a rate, that maintains their biodiversity, productivity, regeneration capacity and their potential to fulfill, now and in the future, relevant ecological, economic and social functions that does not cause damage to other ecosystem. Forest Management and Protection is anchored on the Forest Act No. 4 of 2015 and the National Forestry Policy of 2014.

3.15.1.1 Key Government Priorities Being and To Be Implemented at a Local Level

3.15.1.1.1 Afforestation and Reforestation

To foster sustainable forest management such as establishing of tree nursery plantations nurseries. From 2007 to 2018 the district established 10, 382 tree plantations.

Table 36: Supply Plantations at Mpima Forestry Station

District	Current Status		Size Hectares	In	Year Established	Remarks
Kabwe	Species	No Of Trees				
	1. Pinus Kesiya	2, 500	3		2018	- Some trees died due to termite attack.
	2. Pinus Kesiya	435	1		2014	- Plantation was burnt when seedlings were at tender age hence reduction of number of trees in a stand.
	3. Khaya Nyasica	247	1.2		2015	
	4. Gmelina	2, 400	2		2007	- Growth of trees disturbed due to persistent fire attack.
	Aborea	4, 800	3		2008	

	5. Gmelina				- Stand disturbed due to
	6. Aborea.				fires & illegal cutting of poles. - Stand disturbed due to fires & illegal cutting of poles.

Source: Forestry Department

3.15.1.1.2 Forestry Extension and Service Delivery

The availability of the forest reserves has provided an opportunity for the rural communities to subscribe to sustainable income generating activities and community forestry. The table below shows the women groups, cooperatives and individuals who are practicing beekeeping in Kizito, Lukali, Muswishi, Mpima, Prospect and Natuseko area.

Table 37: Women groups, cooperatives and individuals practice bee keeping

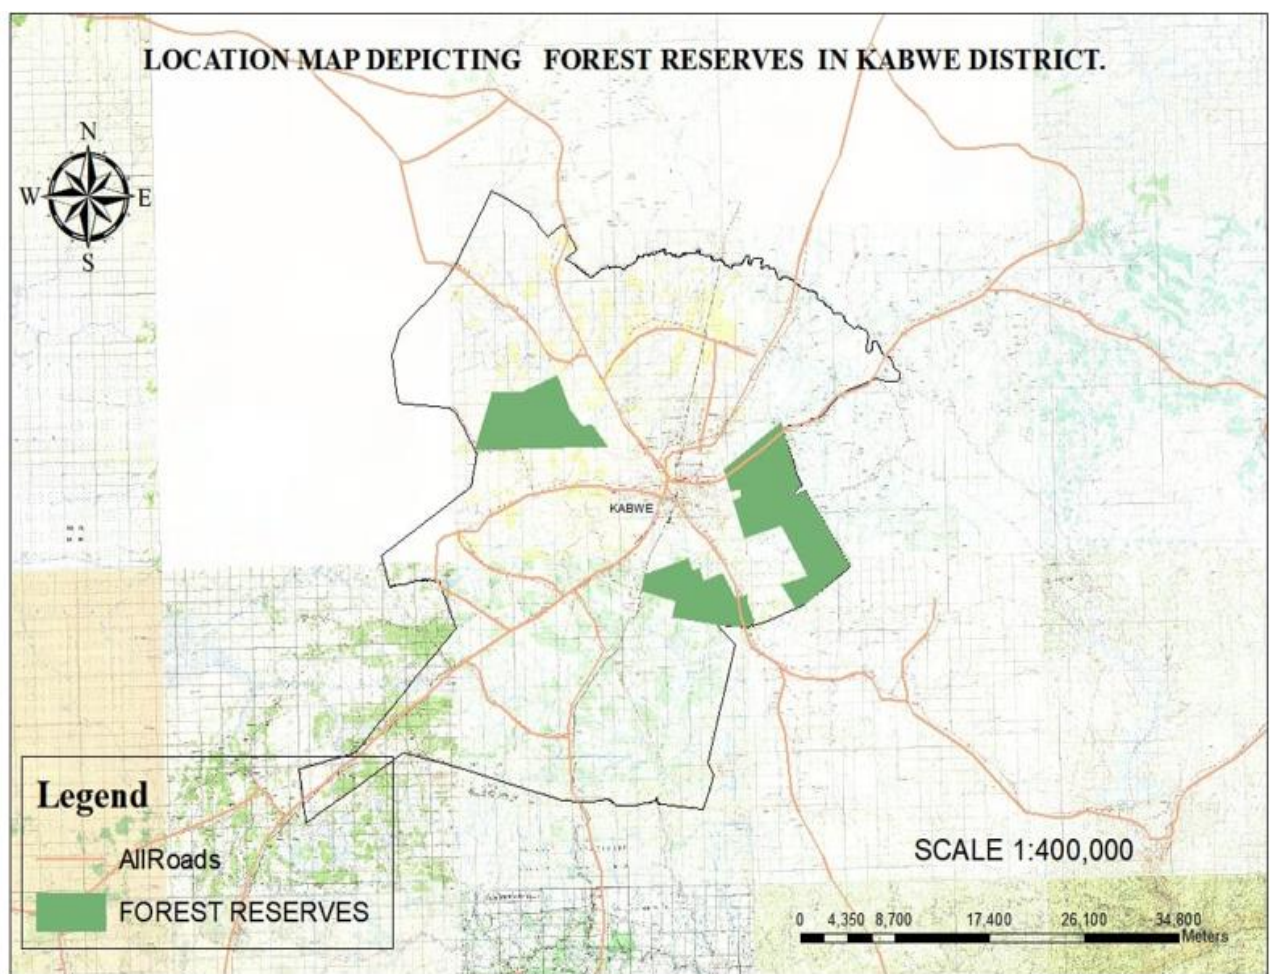

Name of group	Membership		Area	Production levels			Status/Funding
	M	F		No. of Hives	Honey (Kg)	Beeswax (Kg)	
Kizito (NHC)	14	08	Kizito	12	120	15	Some group members are active and needs to be motivated. Funding from group savings.
Lukali Savings and Credit Cooperative	23	45	Lukali Area (Nkausu village)	10	unknown	Unknown	Group needs to be motivated. 10 individuals are active and own bark hives. Funding from group savings
Kafungabubala	12	08	Muswishi	-	Unknown	unknown	Group needs to be revisited and motivated as group is not active.
		Individuals					
Mrs. Chabuka & family	4	1	Mpima	15	Unknown	unknown	Needs to be financially supported as she is very active.
Ms. Nindi Malawo	4	2	Prospects	09	20 comb honey	Nil	Very active and needs to be supported technically with training.
Mr & Mrs. Kizito Nanguzyambo	2	1	Natuseko	05	142	Nil	Very active and needs to be supported technically.
Total	59	65		51	285	15	

Source: Forestry Department

3.15.1.2 Description of the Existing State of Development

The district has forest reserves covering a total surface area of 15,334 ha. The protected forest reserves are Kabwe National Forest Reserve No. 31, Kalulu Local Forest No. 32, Chibanga Local Forest No.53 and part of Munyama National Forest No.62 shared with Chisamba district. The Protected Forest Area (PFA) was 10,025 ha before 1,956 ha was excised under Statutory Instrument No.73 of 2019, therefore the current surface area for the forest reserve in the district is 8,069 ha. The district has a nursery and plantation at Mpima Forestry Station with the production capacity of 100,000 seedlings in a season. The figure below shows the existing forest reserves in the District.

Figure 68: Forest reserves in the District

The district is faced with a challenge of encroachment in the forest reserve trafficking of forest resources.

Table 38: Forest Reserves in Kabwe District and the Encroachment Levels

NAME	No.	SIZE (Hectares)	LAND CATEGORY	STATUS
Kabwe	F31	8, 069	State land	Encroached 40%
Chibanga	P53	154	State Land	Encroached 30%
Kalulu	P32	4, 781	State land	Encroached 30%

Source: Forestry Department

3.15.1.3 *The Impact of Existing Trends on the Environment and Climate Change*

Forest reserves in Kabwe have undergone changes over the years due to encroachment by humans who are engaged in activities as such agriculture, charcoal production and even settlements. Other causes of human encroachment in the forest reserves could be attributed to family ties and unemployment which was caused by privatization of parastatal companies, which included the mines. This have undermined people's livelihoods.

The restructuring of the forest department that abolished the position of forest guards made "vacant" protected forest land an attractive option for farm land. Depleted land for farming in customary areas due to poor inappropriate farming methods have led to people rushing for the fertile soils found in the rich nutrient biomass of the forest reserves. The encroachment of these forests reserves has resulted in serious deforestation, which has led to the loss to some tree species and subsequently biodiversity being threatened by altered ecosystem, land degradation and climate change. Encroachments in the forest reserves started period between 1995 and 1996 at the start of the privatization in Zambia.

Currently the District has over 10, 000 people living in the three forest reserves of Kabwe District. With the anthropogenic activities brought about as a result of

human encroachment, the protective and the productive role of forest reserves have diminished. The loss of water supply from rivers and streams, loss of biodiversity and loss of wood and non-wood forest products. This has also brought about Climate change as we are experiencing extreme temperatures and disturbed rainfall pattern.

Figure 69: Kalululu Forest

Kalulu Forest is one of the gazetted local forest reserves in the district with land in extent of 4,781 ha and is located about 10Km west of the CBD. The forest is close to Makululu compound which is known as the largest informal settlement in Southern Africa.

Over the years, the forest has drastically been degraded due to human activities such as agriculture, charcoal production and construction. The forest has the largest well field for Lukanga Water and Sanitation Company (LgWSC) and was considered the richest recharge area for the district. However, rapid deforestation and continued encroachment on the land has largely contributed to the reduction in available ground water resources. This is evidenced by a reduction in the amount of water abstracted by LgWSC from approximately 1,000,700m³ to 700,000 m³ per annum from 2015 to 2020.

Kalulu Plant initially had 20 boreholes in operation abstracting water at 200m³ per hour but were closed down. Only six boreholes were operational and could only extract water at 120m³ per hour. The company was therefore, unable to abstract adequate water to meet the demand.

Source: KMC, 2020

A comparison of satellite images taken in 2009 and 2019 show a significant change in forest land cover in the district as depicted in the figure below;

Figure 70: A comparison of the Kalululu Forest Cover in 2009 and 2010

The figures in the table above depict the actual forest area while the rate of deforestation is the difference between the forest area of the current year and the preceding year. e.g $14,825.5 - 14,751 = 74.5$

Protected forests accounted for 9.49 percent of the total district surface area between 2010 and 2018 and 8.25 percent in 2019 due to excision of part of Kabwe National Forest No.31. Areas which were originally reserved or protected such as forests had been excised and opened up for development

In addition, illegal development of land has also increased resulting in encroachment and conflicting land uses. Table 11.1.3 shows encroachment levels in Kabwe from 2010 to 2019.

Table 40: Rate of Deforestation

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019
Hectare	14,825.50	14,751	14,676.50	14,602	14,527.50	14,453	14,378.50	14,304	14,229.50	12,869.50

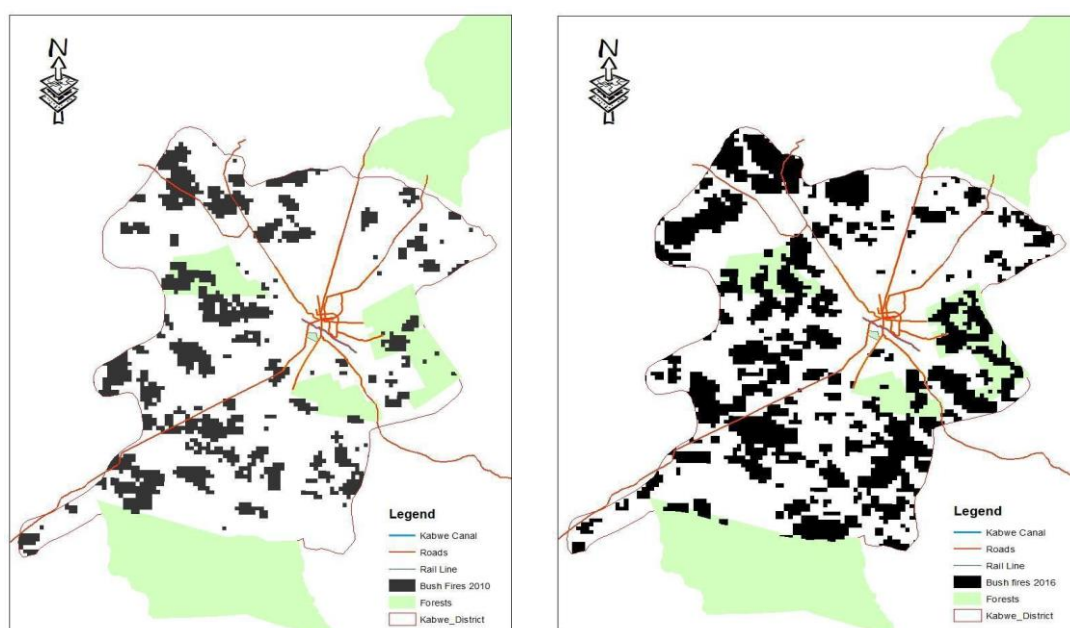

Table 29: Encroachments of Forests in the District from 2010 to 2019

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019
Percentage	5	15	20	20	32	40	40	40	40	65

Table 30 shows the levels of encroachment of protected forests which have been on an increase from 5 percent in 2010 to 65 percent in 2019 representing a loss of 11.1.3 ha. Encroachments are due to extension of agriculture land, settlements and charcoal production amongst others. The impacts of this forest loss include loss of biodiversity, water recharge areas, reduced soil fertility and disturbance of the ecosystem.

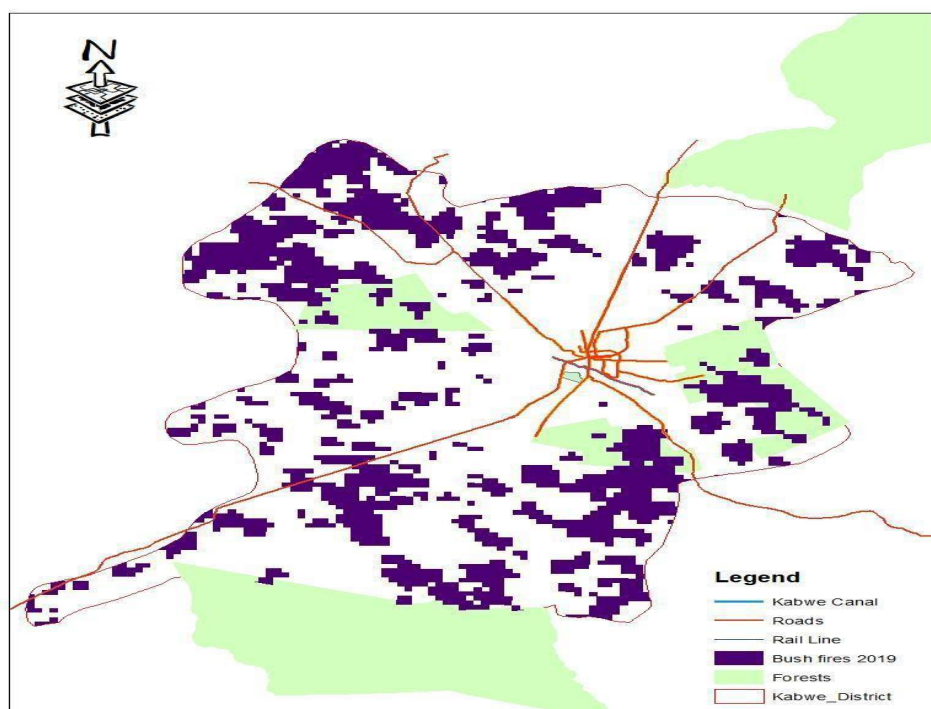

Uncontrolled bush fires are another threat to the ecosystem in the district. Figures 69, and 70 shows burnt areas in the district in 2010, 2016 and 2019.

Figure 71: Uncontrolled Bush Fires in 2010 Uncontrolled Bush Fires in 2016

ZEMA, 2020

Figure 72: Uncontrolled Bush Fires in 2019

ZEMA, 2020

Most of the areas burnt was agriculture land due to burning of crop residue, clearing of pathways, re-growth promotion of herbaceous species for livestock grazing and generation of ash for soil fertilization. The analysis further showed that over 30,000 ha of land was burnt annually during the period under review.

3.15.1.4 Summary of the core issues

the following is a summary of the core issues highlighted under forestry

S/N	Core Issue	Affected Ward /Location
1	High rate of deforestation.	All gazetted forests (Kabwe, Chibanga, Kalulu)
2	Uncontrolled bushfires.	All gazetted forests (Kabwe, Chibanga, Kalulu)
3	High rate of illegal developments in the forest reserves.	All gazetted forests (Kabwe, Chibanga, Kalulu)

3.16 Solid Waste Management

3.16.1 Key Government Priorities Being and To Be Implemented at a Local Level

The Provision of solid waste management will be a priority under this Plan with focus on institutional and capacity development to ensure the local authority is well equipped to provide the service. Provision of appropriate equipment and infrastructure for solid waste management will be facilitated to ensure sustainable service delivery. Strategies to improve solid waste management services will be intensified in the District. Key priorities will be given to;

- i. Intensifying sensitizations in all the wards on solid waste management.
- ii. Engagement of Franchise Companies and Community Based Enterprises to service the six solid waste zones in the District.
- iii. Procurement of solid waste management equipment such as Tippers, Front-end Loaders, Compactors, Skip bins, PPE, and others.
- iv. Intensifying the Keep Kabwe Clean, Green, and Healthy Campaign.
- v. Enforcement of the Laws on Solid Waste Management.

3.16.1.1.1 Solid Waste Management Legislation

The Local Authority is mandated by the following pieces of legislation to conduct its duties in Solid Waste Management;

1. The Solid Waste Regulation and Management Act No 20 of 2018
2. The Local Government Act No 2 of 2019
3. The Public Health Act CAP 295
4. The Statutory Instrument NO 12 of 2018
5. The Environmental Management Act of 2011

3.16.2 Description of the Existing State of Development

Estimated waste generation for the District was calculated using population projections and an assumed generation of 0.6 Kg daily per person. Based on these estimates, 51,311,880 Kg was generated in 2020 and 52,791,045 Kg in 2021. The major types of wastes being generated in the District include plastics, paper, bottles, waste

food, leaves, etc. The sources of wastes are Market activities, CBD businesses, Street activities, industrial activities, and Households.

Table 43: Estimated Waste Generation per year from 2020 to 2035

Year	Population	Estimated Waste Per Annum (Kg)
2022	299,206	51,311,880
2025	329,816	52,791,045
2026	340,700	55,500,075
2030	387,947	59,077,221
2036	456,325	62,725,542

KMC, 2022

3.16.2.1 Solid Waste Management Situation

In order to improve waste management in the District, Kabwe Municipal Council conducts awareness campaigns targeting communities through radio programs, meetings in wards and public announcements. Kabwe Municipal Council conducts routine streets and markets cleaning, and collection of solid waste and disposal. A total number of 42 crew-men are involved in solid waste management. The Council currently has six skip bins, one skip loader, one tractor, and one Hino truck that are being used for solid waste management and waste is collected and disposed of on a daily basis.

The Council currently has one disposal site in Mukobeko area which is located 7KM away from Town Center. Mukobeko Dumpsite is a controlled open disposal site, currently used by the Council and authorized Franchise Companies. An approximation of 1,896 tonnages of solid wastes is being disposed of at the dumpsite every month. Dumpsite clearing takes place at least twice per year using hired equipment.

Figure 73: Loading of garbage in the skip bins Hired Front End Loader clearing dumpsite

In order to improve solid waste service provision in the District, the Council has zoned the District into six Solid Waste Zones, and currently working on the advertisement to engage franchise companies as well as Community Based Enterprises to service the designated Zones and they will be in operation by 2023. The council has currently temporarily engaged four Franchise Companies to collect waste in outskirts of the CBD especially residential areas.

3.16.2.2 Keep Zambia Clean, Green and Healthy Campaign

This is an activity that is implemented on a monthly basis by all residents of Kabwe. In Kabwe District, it is held on every second Friday of each month. Stakeholders include Public and Private Institutions, Provincial Administration, Schools, all substructures at ward level and the ward Councilors, Market Committees and the Marketeers, Street Vendors Association and its vendors, the Media, Defence and security wings etc. The Council spearheads this activity and the objective of this campaign is to manage the environment by ensuring that it is free from any form of contamination so as to create a conducive, clean and safe environment for people to live in.

In order to enhance full participation by all stakeholders, a Steering Committee was formed to spearhead the activities of the campaign and meetings are held once in a month. Identification of areas to clean is done by the steering committee with the engagement of ward councilors.

Once the cleaning is done, a report is generated which is sent to the Ministry of Local Government and Rural Development. The report is also shared with other key stakeholder e.g. the Provincial Minister, the Permanent Secretary, the Mayor etc.

3.16.2.3 Quality of Service Including Key Indicators of Performance

Solid waste management is a challenge as the Kabwe Municipal Council does not have the capacity to service the whole District resulting in waste accumulation particularly in the urban and peri-urban areas. This is due to lack of adequate equipment such as Tipper Trucks, Frontend Loader, Bulldozer and others. The council relies on hiring of such equipment whenever clearing dumpsite and collecting of waste in communities. The situation is expected to worsen with the increase in population every year.

Street vending is another challenge the District is facing. , population in the street market is growing at a fast rate (600 in 2019 to 1000 in 2021). More than 1000 vendors have been recorded in 2022, spreading to other parts of the CBD that are not yet affected. This has potential to cause communicable diseases because hygienic and sanitation standards are compromised on the streets such as lack of water supply, sanitary facilities, and refuse receptacles on the streets. Vendors leave the streets littered with waste, urinating in undesignated places, and defecating in undesignated open spaces. It is therefore recommended that all traders should be relocated to designated market places where there is enough water supply and sanitary facilities to prevent any occurrence of public health related diseases.

3.16.4 Issues Arising from the Public Participation Process

The following were the submissions made during the community participation process;

- i. The Council does not have equipment such as Tipper Trucks, Front-end Loader, and Compactor to effectively manage the wastes. As a result waste is accumulating in markets, households, CBD, and at the dumpsite.
- ii. The District has only 6 Skip bins which are being used for waste storage. These are inadequate, for the District has more than 20 markets.
- iii. Unsecured dumpsite which gives access to scavengers and stray animals.
- iv. No recycling companies in the District. Recycling can reduce the quantity of waste that is being disposed of at the dumpsite.
- v. Indiscriminate disposal of waste by some residents and businesses.
- vi. The rapid growth of street vending in the CBD of Kabwe leaves the streets

littered with all kinds of wastes, urine and feces.

3.16.5 Impact of the Continuation of Existing Trends on Population and Settlements

The growth in population, with corresponding increases in commercial, industrial, agricultural, livestock, and other economic activities in the district, the volume of waste being generated are also anticipated to increase. As the population of the District increases and economic development takes place, it will become increasingly important that waste is properly managed. The growth in population means an increase in the quantity of wastes being generated by the residents and businesses of Kabwe. This in turn will demand for improved and enhanced solid waste management service delivery. The Council will require more equipment, more workforce, and an engineered dump site to effectively manage the wastes in the District.

3.16.6 Impact on the Environment and Climate Change

Poor solid waste management, which ranges from non-existing collection systems to ineffective disposal- cause air pollution, water and soil contamination. Open and unsanitary disposal of wastes contributes to contamination of drinking water and can cause infection and transmission of diseases. The climate impacts of solid waste are also hard to ignore. The improper disposal and treatment of waste can produce emissions of several greenhouse gases, which contribute to global climate change. The most significant greenhouse gas produced is methane which is released during the breakdown of organic matter. This calls for improved and intensified solid waste management in the District, especially with the rapid increase of population in Kabwe.

3.16.7 Impact on Gender and Vulnerable Groups

Most of the Scavengers found at the Council Dump site are women and children which put them more at risk to infection and disease transmission. These are people coming from low-income areas of the District, and mostly not covered in the Council's solid waste collection system. Special attention needs to be paid to vulnerable populations such as low-income households, women, children, and peripheral residents when designing the solid waste management system, including storage, collection, transportation, and disposal. The engagement of Community Based Enterprises and Franchise Companies is the solution to this challenge.

3.16.8 Summary for the sector

The core problem affecting Solid waste management is that Kabwe Municipal Council does not have the capacity to service the whole District resulting in waste accumulation particularly in the urban and peri-urban areas.

3.16.9 Consideration of the Underlying Factors Contributing to the Issues Identified

The underlying factor contributing to the identified Issues is mainly the lack of adequate equipment such as Tipper Trucks, Frontend Loader, Bulldozer, Compactors, Skip Bins, and others. The council relies on hiring of such equipment whenever clearing dumpsite and collecting of waste in communities.

3.17 Law and Order

Law and order form the bedrock upon which the development of Kabwe District rests, creating a conducive environment that fosters progress, stability, and societal well-being. The significance of the importance of maintaining law and order within the context of Kabwe District area is multifaceted, with implications spanning economic, social, and infrastructural dimensions.

3.17.9.1 Key Government Priorities Being Implemented and to Implemented at a Local Level

In promoting law and order, the Government has prioritized strategic investments in police infrastructure through the construction of new facilities and the rehabilitation of the existing ones. The allocation of funds such as Constituency Development Fund to procure motor vehicles for Zambia Police in the two constituencies of the District underscores Government's commitment in enhancing the operational capacity of the police force.

3.17.9.2 Description of the Existing State of Development

Currently the district has three levels of courts namely High (1), Subordinate (1) and Local courts (3), seven police stations and 18 police posts. Other security infrastructure in the district is Kohima and Chindwin Barracks, Zambia National Service Training Base and Zambia Air Force Base.

3.17.9.3 Issues Arising from the Public Consultations

The public participation process revealed that some wards did not have police infrastructure and accommodation for the staff particularly in the rural and peri-urban areas of the district which resulted into high crime rate in the area. The participation process further revealed that some police infrastructure in some wards such as Katondo, David Rumosho were not yet completed which threatened the security of the community while other infrastructure needed to be further upgraded into police stations to make them fully operational. The table below is a summary of the wards that had highlighted the need for a police infrastructure.

Table 44: Summary of the Public Participation process

ISSUES RAISED	WARD AFFECTED
High crime rate/Gender Based Violence	
Inadequate Infrastructure Police	- Muwowo East and West, David Ramusho - Justin Kabwe, Waya, Katondo, Kalonga - Luangwa (Jasmine zone), Luansanse - Kaputula, Ngungu (Manyoni area), Kawama, Ben Kapufi, Chilalila, Zambezi - Kangomba, Munga, Chinyanja
Need to Upgrade Police post	Lukanga
Need to complete police posts	Katondo, Magandanyama
Inadequate office space at Police station	Bwacha
Inadequate staff houses for Police personnel	

3.18 Summary of Issues and Concerns from the Public Participation Process

A summary of core issues and concerns that were raised during the public participation process have been attached hereto as Appendix 1

PART THREE

DEVELOPMENT FRAMEWORK

4.0 Introduction

The development framework highlights the objectives, priorities and strategies to address the core issues highlighted in the Planning Survey and Issues Report. This Development Framework will guide the development of the district for the period 2023 to 2033. The analysis of the core issues was done through a multi-sectorial approach anchored on four strategic development areas of the 8NDP namely Economic Transformation and Job Creation, Human and Social Development, Environmental Sustainability and Good Governance. The first part of this section defines the vision, the overall goal and the strategic outcomes for the district. Furthermore objectives have been formulated to address the issues identified under the Planning Survey and Issues Report. This section has further provided a spatial development framework that will promote sustainable functional and integrated human settlements and will enable attain the vision, goals and objectives of the IDP.

4.1 Vision

Kabwe District aspires to be “*a sustainable vibrant, inclusive, well connected and smart city by 2050*”. The vision of the District resonates well with the National Vision 2030 of becoming a *prosperous Middle-Income country by 2030*. The vision of the district is also aligned to international development agendas such as Agenda 2063 and Sustainable Development Goals. The vision is anchored on the principles of Good Governance such as creating a conducive environment for economic growth, inclusive participation by all citizens in the development of the District, transparency, accountability and enhanced environmental protection. It is envisioned as a well-connected smart city with good and efficient transport and communication networks that will integrate the application of technology and innovation in improving the quality of life of the people of Kabwe.

4.1.1 Overall Goal

To transform into a green, clean, and health district attractive for investment

4.1.2 The strategic Outcomes of the KIDP

The strategic outcomes of the KIDP are aligned to the aspirations of the 8NDP whose overall objective is to meet the goals contained in the National Vision 2030. The strategic outcomes of the KIDP are;

- i. Inclusive economic growth with expanded job and business opportunities

- for all especially youths and women
- ii. A diversified and resilient economy
- iii. A Transformed green, clean, and healthy district attractive for investment.
- iv. To mitigate the impact of climate change on the environment through SMART agriculture practices, forestry management and other climate resilient programs
- v. Improved education and skills development
- vi. Improved water supply and sanitation
- vii. Enhance Human and Social Development through promotion of access to public and social services
- viii. Reduce Poverty and vulnerability by creating an enabling environment for equal business opportunities

4.1.3 Policies to Direct Development

The development of the district will be guided by policies such as the vision 2030, Eighth National Development Plan, Local Economic Development (LED) Strategy, National Health Policy, Educational Policy, agriculture policy, education policy, disability policy, gender policy, tourism policy as indicated in the table below:

Table 45: Policies to direct development

Document	Strategic/Key Focus	Implication for Planning
Vision 2030	This document provides a long-range development aspiration of making Zambia a prosperous middle-income nation by 2030. It provides opportunities for improving the well-being of all, embodying values of socio-economic justice, underpinned by the principles of: (i) gender responsive sustainable development; (ii) democracy; (iii) respect for human rights; (iv) good traditional and family values; (v) positive attitude towards work; (vi) peaceful co-existence and; (vii) private-public partnerships	The IDP shall be aligned to the Vision 2030 and explore ways of making direct contributions to the realization of the Vision. All goals to be integrated in nature to allow for inclusiveness of all.
Eighth National Development Plan	This document sets out Zambia's strategic direction, development priorities and implementation strategies for the period 2022 to 2026. It focuses on key strategic development areas namely <i>Economic Transformation and Job Creation, Human and social Development, Environmental Sustainability and Good Governance</i> . The strategic focus is on transformation and job creation as a propellant to development and its key drivers are in agriculture, mining, tourism, and manufacturing sectors, supported by strategic interventions in the energy, transport, and water development sectors. The plan also focuses on mainstreaming of green interventions such climate change	The IDP will be aligned to the four strategic development areas outlined in the 8NDP , namely, Economic Transformation and Job Creation, Human and Social Development, Environmental Sustainability, and Good Governance Environment, in order to address the socio and economic challenges that the District is facing. .
	adaptation and mitigation measures. The plan further proposes notable interventions such as promotion of climate resilient infrastructure across all sectors for sustainable development.	

LED Strategy	This document promotes sustainable local economic development managed with the participation of key stakeholders at the local level. It promotes collaboration between the local authorities and their partners in the private, public and community sectors to achieve economic growth while maintaining a competitive local economy which responds to the needs and conforms to the values of local People	LED approaches will ensure; that that the local investment climate is functional for local businesses; small and medium sized enterprises are supported; Encouraging the formation of new enterprises;; attracting external investment (nationally and internationally);
National Health Policy	The document sets clear directions for the development of the health sector in Zambia and proposes strategies and programs in the health sector. It takes into consideration various regional and international instruments, protocols and commitments which will ensure that Zambia's health programs are integrated with the regional and global health system. Government has prioritized primary health care services, hospital referral services, human resource development and management, medical supplies and logistics, infrastructure development, legal framework and health care financing	All proposals in the IDP relating to health must be appropriately aligned to the policy and key strategies at the local level and must contribute to national goals in the health sector.
Education Policy	This national policy on education is conceived on the basis of the democratic principles of efficiency, equity, accountability and cost effectiveness. The goal of the education policy is "education for all" regardless of their status, disability, sex, residence etc. It emphasizes partnerships with other stakeholders such as: NGOs, Faith Based Organizations, individuals and parents in the provision of inclusive education for all. The policy considers gender, HIV and disabilities to be among priority cross-cutting issues that need to be integrated in planning	Principles and standards already in place in making proposals for the improvement of the sector must be relied upon. Key issues the IDP must address include location of schools and access including land for expansion and development of the schools at all levels from early child education through to tertiary education These facilities should be duly situated so as to enhance accessibility.
Decentralisation Policy	The long term vision of Government is to achieve a fully decentralized and democratically elected system of governance characterized by open, predictable and transparent policy making and implementation processes at all levels of the public service, effective local community participation in decision-making and development administration while maintaining sufficient linkages between central and local government. The decentralization policy has now been crystalized by the Constitution Act No. 2 of 2016.	All matters relating to planning process, institutional arrangements must be taken into account in the IDP process. Emphasis for planning is to ensure that planning activities are taken at appropriate local level.
National Agriculture Policy	The document guides the development of the agriculture sector and sets out laws relating to domestic agriculture and imports of foreign agricultural products. It takes into consideration the primary, secondary and tertiary processes in agricultural production and provides for attention to the concerns regarding the failure to increase rural incomes and reduce poverty, failure to achieve inclusive growth, the perpetual agricultural financing and marketing challenges; and climate change associated with erratic rainfall patterns	The IDP must make special consideration for areas for agricultural development and for the promotion of high value crops, food crops and livestock, aquaculture and all forms of agriculture. Considerations must be made for urban agriculture to supply urban centres and provide incomes.

Tourism Policy	Provides for sustenance of the economic well-being and enhanced quality of life for Zambians through Government led, private sector driven, quality product developments that are consistent with the protection of the unique natural and cultural heritage. It also provides for local communities, as traditional custodians of Zambia's natural and cultural heritage of land to have a vital role and responsibility in sustainable tourism development.	Proposals in the IDP must be aligned to the national strategies on tourism and must have a direct buy-in to the key strategies in the national policy to avoid conflict.
National Forest Policy	The Policy provides for sustainable forest resources and ecosystem management will be ensured through (i) integrity, productivity and the development potential of the forest resources, (ii) protection of forests, by empowering local communities and promoting the development and use of wood, non-wood forest products and services, (iii) investment in plantation forestry, (iv) application of both scientific and local knowledge on sustainable management of forest ecosystems and biodiversity, and (v) improvement of the role of forests for climate change adaptation and mitigation..	The IDP will ensure efficient and sustainable use of resources in fostering development
Disability Policy	Provides for the consideration of persons with disability. The policy is aimed at making sure that the persons with disabilities also live decent and productive lives without any barriers. It promotes equal opportunities in the provision of basic needs and human wants; non-discrimination and accessibility to services such as quality health care, education and skills as well adequate standard of living and social Protection	Equitable access for persons must be incorporated in design to facilitate access for all persons with disability in the development of the IDP Area.
Gender Policy	It aims to ensure the attainment of gender equality in the development process by redressing the existing gender imbalances in the nation, providing equal opportunities for women and men to actively participate and contribute to, as well as equitably benefit from national development. It also addresses gender-based violence, human trafficking, drug abuse and trafficking; gender disparities in positions of decision making; emerging health issues affecting mostly women and girls and the negative impact of climate change.	IDP must ensure voices of women are heard and are accorded equal opportunity in identifying issues and priorities for their communities. The planning process must deliberately ensure that women actively participate as stakeholders in the consultations.
Climate Change Policy	The National Climate Change Policy provides the country with home grown initiatives targeted at minimizing the impact of climate change on national development. It supports and facilitates a coordinated response to climate change by re-aligning its climate sensitive sectors of the economy and society. The policy also provides stakeholders with a clearer framework on how to tackle climate change and vulnerability in Zambia.	IDP must recognize climate change issues for mitigation and adaptation measures. Gender must be a critical concern and must be addressed as part of Climate change adaptation and mitigation.
Housing Policy	A policy to guide the development of adequate affordable housing for all income groups in the country. It provides for making serviced land available for housing development and streamlining the land allocation system; streamlining building standards; encouraging the production and use of local and affordable building materials; helping the poor acquire decent shelter; fostering functional, healthy, aesthetically pleasant, and environmentally friendly; and preparing a national housing implementation strategy.	The issue of land for housing development is a critical issue that requires the state, traditional leaders, private sector and the local authority to partner for housing. Effective demand for housing must be established. Land for housing should be considered for current and future populations.
National Cultural Policy	Culture is one of the fundamental dimensions of development. Cultural development constitutes one of the essential instruments of general development and the improvement of quality of life. This policy is aimed at facilitating participation by all in the creation and enjoyment of our cultural wealth. It also propagates the participation of all stakeholders in the development and promotion of the Zambian culture.	Integrating culture in the IDP is essential for the promotion of socio-economic empowerment and preservation of culture for sustainable human development.

National Trade Policy	National Trade Policy was established to enhance domestic trade and ensure effective participation of private sector players in regional and international trade. The Trade Policy highlights the importance of eliminating barriers to trade and providing an enabling environment in which the private sector thrives and build capacity to produce quality goods and services competitively, reliably, and on a sustainable basis.	IDP must take into account Trade Policy measures aimed at handling trade related constraints, with a view to promoting production for export and diversify the economy through local economic development (LED).
------------------------------	---	--

4.2 Economic Transformation and Job Creation

This section presents the overall direction taken to bring about an Industrialized Diversified Economy in the district. The section provides details of the issues raised and the possible strategies, activities and targets planned in order to achieve equitable economic development in the district. The Strategic Development Area on Economic transformation and job creation seeks to catalyse the industrialisation and economic diversification agenda of the District supported by targeted strategies aimed at actualising the desired outcomes as shown in the following table. Further, several reforms are proposed to be implemented to unlock development bottlenecks in order to revamp the economy and foster sustainable development of the district.

Goal: *An Industrialized Diversified Economy*

Table 46: Economic Transformation and Job Creation (8NDP Pillar 1) Development Framework

Strategies	Program	Activities	Location	Baseline	Target	Year 1	Year 2	Year 3	Year 4	Year 5	Responsible
Improve access to rural and urban areas. Relevant	Infrastructure development	Objective 1: To develop and maintain 250km of safe and sustainable road network and drainage system by 2027									
		Rehabilitation of 50Km damaged township roads and drainages	Entire district	0	50km	10km	10km	10km	10km	10km	Kabwe Municipal Council and RDA
		Construction and maintenance of 150 km feeder roads and drainages	Entire district	0	150km	40	30	30	25	25	Kabwe Municipal Council and RDA
		Construction and maintenance of 50 Km township roads and drainages	Entire district	0	50km	10	10	10	10	10	Kabwe Municipal Council and RDA
		Gazetting/Street /naming of 120 undefined township/feeder roads	Entire district	0	120 streets	40	20	20	20	20	Kabwe Municipal Council
		Procurement of road construction equipment (grader, compactor, tipper, excavator)	Entire district	1	7		3		4		Kabwe M. Council
		Objective 2: To construct 2 bridges by 2027									

		Construction of bridge	Munyama Kalima	0	2		1	1			Kabwe Municipal Council
		Objective 3: To construct 1 Airport and rehabilitate 1 airstrip by 2022									
		Upgrading of Airstrip	Chililalila	1	1		1				Kabwe Municipal/National Airport
		Construction of an Airport	Mpima	0	1			1			National Airport
		Objective 4: To protect 50km of railway infrastructure from encroachments and rehabilitate 140 km rail line stretch by 2027									
		Repossession of 50KM encroached Rail land	Along the strip rail Reserves	0	50	10	10	10	10	10	Kabwe Municipal/ ZRL
		Rehabilitation of the rail Line of 140 km	Entire district	0	140km	28	28	28	28	28	Kabwe Municipal/ ZRL
Facilitate for Business Development among co-operatives and promotion and registration of co-operatives in different sectors	Cooperatives promotion and Development	Objective 5: To reduce poverty at Household level from 60% to 44.7% by 20227									
		Conduct sensitization meetngs on the formation of cooperatives in the identified priority sectors	All wards	0	29 wards	9 wards	20 wards	0	0	0	MSMED-Department of Cooperatives, Local Authority
		Formation and Registration of Co-operatives in different sectors	Across the district	200	1230	430	200	200	200	200	MSMED/KCM
		Conduct the training of selected cooperatives in viable value chains for their development	Across the district	200	1300	200	200	250	300	350	MSMED-Department of Cooperatives, Local Authority

		Conduct training on how to develop business plans focusing on utilizing local opportunities at district level.	Across the district	150	1750	250	300	350	400	450	MSMED- Department of Cooperatives, Local Authority
		Conduct sensitization meetings focusig on the provision of linkages in business development Support services	Across the district	0	1300	200	200	250	300	350	MSMED- Department of Cooperatives, Local Authority
Establishment of bus stations for both local and long-distance travel	Construction and maintenance of Bus stations	Objective 6: To compete 1 bus station and rehabilitate 2 ablution blocks on existing bus stations by 2027									
		Completion of the Lukanga bus station	Lukanga Ward	1	1		1				KMC, MLGRD
		Rehabilitation of toilets in existing bus stations	Green Market Station	2	2	1	1				KMC, MLGRD
Construction of modern markets and maintenance of existing ones.	Construction and maintenance of markets	Objective 7: To develop and maintain 13 markets by 2027									
		Rehabilitation of toilets at Market	Chimanimani, Nakoli, Njanji, Katondo	0	4	2	2				KMC, MLGRD
		Provision of market stalls to traders	Bwacha Markert	0	1						KMC, MLGRD
		Improvement of market shelters in existing markets	Bwacha, Nakoli, Waya, Kalonga (Pollen, Kamushanga market)	3							KMC, MLGRD
		Drilling of 10 boreholes in markets	Bwacha and Kabwe Central	2	10	3	7				KMC, MLGRD

		Construction of 13 modern market shelters in the district (Zambezi, Ngungu, Kawama (Zambani area), Chililalila, Muwowo West (Chikupwi zone), Muwowo East (No man's land between ZCS and K Mulonga small holding), Justin Kabwe, Katondo, Lukanga, Munga, Mpima, Kalonga (Makwati and Kakumbi), Highridge)	All Wards	0	13	3	10				KMC, MLGRD
Objective	Objective 8: To Improve agriculture production and productivity by 2027										
Improvement of Agriculture Infrastructure	Infrastructure development	Construction of one Farmer training center	Mutwewansofu	0	1	0	1				
		Construction of 29 agriculture camp houses	Across the District	3	29	0	2	4	5	6	MoA
		Construction of 4 Agriculture block offices	Munyama, Mpima, Waya and Munga	1	4	0	1	1	1	1	MoA
	Promotion of Post-harvest handling facilities	Construction of 19 Storage Shed facilities.	All camps	0	19	0	2	4	6	7	MoA
Increase Hectarage under irrigation	Irrigation farming promotion	Conduct Farmer sensitisation meetings	Across the District	50	190	38	38	38	38	38	MoA
		Conduct Farmer training	Across the District	19	95	19	19	19	19	19	MoA
		Construction of a dam	Munyama Block	50	1	0	0	1	0	0	MoA

Improvement of Agriculture extension services delivery	Extension Service Support	Recruitment of 10 camp officers	Across the district	19	10	0	3	3	2	2	MoA
		Procurement of 29 Motorbikes	Across the district	0	29	0	7	7	7	8	MoA
		Procurement of Vehicles	Farmer Training center and DACO’s office	1	2	0	1	1	0	0	MoA
Promote value addition	Value chain development	Training farmers in value addition in various crops	Across the district	5	25	5	5	5	5	5	MoA
Facilitation of Increased access to agriculture finances	Agribusiness development	Training of SMES in agribusiness	Across the district	10	110	10	10	20	30	40	MoA
		Linking SMEs to financial institutions	Across the district	10	110	10	10	20	30	40	MoA
Improvement of Farmer input support management system	Farmer input support	Support farmer beneficiaries with farming inputs (FISP)	Across the district	20,764	20,764	20,764	20,764	20,764	20,764	20,764	MoA
Promotion of Agricultural Mechanization	Agricultural Mechanization	Conducting sensitisation and training in agricultural mechanization	Across the district	25	55	10	10	10	10	15	MoA
Establishment of solar plants		Establishment of solar plants	Makululu ,mpima,Luansanse, Muwowo East/West Kawama, Shakumbila ,Makombe, Prospect	0	9		2	2	2	3	MoA
		Identification and titling of land for 9 Solar Power Plants		0	9		2	2	2	3	KMC
Wind energy			Establishment of 2 wind farms	Central and Bwacha	0	2					

Promote value addition	Objective 9: To increase on number of crops on value chain addition from 2 to 4 crops by 2027										
	Value chain development	Training farmers in value addition in various crops	Across the district	5	25	5	5	5	5	5	MoA
Construction and Rehabilitation of Cultural Tourism and museum infrastructure	Objective 9: To Promote Tourism Growth by 2027										
	Infrastructure Development	Rehabilitation of theatre houses	Kabwe Industrial Area	0	1	1					Ministry of Tourism and Art
		Identification, rehabilitation and construction of crafts centers	Across the district	0	1		1				Ministry of Tourism and Art
Development of Tourism Cultural Products	Tourism development	Identify and develop Home stay cultural tourism spaces	Across the district	0	4		1	1	1	1	Ministry of Tourism and Art
		Identify and mentor Traditional crafts practitioners	Across the district	0	20	4	4	4	4	4	Ministry of Tourism and Art
		Taking inventory of 2003 ICH convention and sensitization	Across the district	0	10	2	2	2	2	2	Ministry of Tourism and Art
		Identify, train and mentor Traditional crafts practitioners in value addition and production of quality crafts and establish markets linkages	Across the district	0	20	4	4	4	4	4	Ministry of Tourism and Art
		Conduct Cultural Exhibitions and Tours at Heritage sites	Across the district	0	15	3	3	3	3	3	Ministry of Tourism and Art
		Hold Cultural Carnival Festival / Roadshows	Across the district	5	30	5	5	5	5	10	Ministry of Tourism and Art

		Link Cultural dance & bands groups with the hospitality industries, mines, security wings and others	Across the district	0	45	5	10	10	10	10	Ministry of Tourism and Art
Identification and registration of Creative Industries enterprises and Artists	Enterprise Development Initiative	Identification and registration of Artists	Across the district	0	100	20	20	20	20	20	Ministry of Tourism and Art
		Develop Creative Industries enterprises Value chain and Market linkages	Across the district	0	400	50	50	100	100	100	Ministry of Tourism and Art
		Identified and register arts with PACRA, ZAMCOPs, Local Authority, Ministry of Commerce	Across the district	0	2000	250	250	500	500	500	Ministry of Tourism and Art
		Training and mentoring Artists in Talent and Business skills	Across the district	0	700	100	100	100	200	200	Ministry of Tourism and Art
Identification and registration of Creative Industries enterprises and Artists	Talent and Entrepreneurship Skills Development and mentorship programs	Develop and hold Artists Shows and Exhibitions	Across the district	0	50	10	10	10	10	10	Ministry of Tourism and Art
		Undertake Artists Visitors, visitations and Inspection Tours	Across the district	0	15	3	3	3	3	3	Ministry of Tourism and Art
		Identify Expressive Arts Teachers and Art Experts in formal employment	Across the district	0	30	5	5	5	5	10	Ministry of Tourism and Art

		Identify Artists enterprises as fully surviving on art	Across the district	0	200	25	25	50	50	50	Ministry of Tourism and Art
		Establish Creative Industries enterprises value chains and market linkages	Across the district	0	10	2	2	2	2	2	Ministry of Tourism and Art
		Identify Film and Drama practitioners identified and hold Talent shows	Across the district	0	150	25	25	25	25	50	Ministry of Tourism and Art
		Identify Music and Dance practitioners and hold Talent shows	Across the district	0	50	10	10	10	10	10	Ministry of Tourism and Art
		Identify Poetry and Comedy practitioners and shows	Across the district	0	20	4	4	4	4	4	Ministry of Tourism and Art
		Undertake field visits to Art galleries, Play and theatre houses, exhibitions centers and studios for enhancement of quality products	Across the district	0	15	3	3	3	3	3	Ministry of Tourism and Art
	Creative Industries Infrastructure development	Establish/ rehabilitate /develop Arts Business centers spaces	Across the district	0	2		1	1			Ministry of Tourism and Art

Objective 10: To Improve Livestock production and productivity from by 2027											
Rehabilitation and construction of Livestock infrastructure	Infrastructure development	Rehabilitation of Dip Tanks and Spray Race	Munga West, Munga North, Munyama, kafulamase, Mpima	0	6		1	1	2	2	MFL
		Construction of Dip Tanks	Chinyanja Muwowo East, Muwowo West, Luansanse	0	4	1	1	1	1		MFL
		Construct of Livestock Camp houses	Across the district	0	6		1	1	2	2	MFL
		Rehabilitate a veterinary Clinic	District Office	1	1		1				MFL
		Rehabilitation of Abattoir	Industrial area	0	1		1				MFL
		Construction of 5 cold storage facilities	Entire District	0	5	1	1	1	1	1	MFL
		Construct 10 kennels	District office and in all Vet Camps	0	10	3	2	2	2	1	MFL
		Construction of breeding & livestock centres	Entire District	0	1		1				MFL
Construction of Acquaculture infrastructure	Objective 11: To improve aquaculture production and productivity from 15.7 to 20 Metric Tonnes by 2027										
	Infrastructure development	Construct Fish ponds	Luansanse (Kafulamase area), Muwowo East (Chitakata and Tuteni)	42	80	16	16	16	16	16	MFL
		Sensitization and training of farmers in fish farming	All wards	0	58	11	11	12	12	12	MFL
Fisheries and aquaculture development	Fish farming promotion	Enhance fish production (Metric tons)	Across the district	15.7mt	20mt	5mt	8mt	12mt	15mt	20mt	MFL
Improve livestock and vet extension service delivery	Extension Service Support	Purchase of motor vehicle for district office	District office	1	1		1				MFL
	Transport-Support	Purchase of 7 motor bikes for extension	In all the 6 camps of the district	5	7	1	1	2	2	1	MFL

Objective 12: To promote local and diaspora participation in the economy in order to create wealth and employment by 2027										
Promote Enterprise Development	Business Development Services Provision.	Promotion of Prep meeting stakeholder 2 Hold meetings with private, expo 2025 ,	Entire District	0		1	2			Kabwe municipal Council/KCCI
		Hold Kabwe Expo preparatory meetings to help promote PPP and business to business joint ventures	KMC	0	4	2	2			KMC Chamber of Commerce, GRZ
		Hold Kabwe expo event aimed at promoting PPP	Entire District	0	1			1		KMC Chamber of Commerce, GRZ
		Hold engagement meetings stakeholders from the private stakeholders aimed at creating a robust value chain system	Entire District	0	20	4	4	4	4	Chamber of Commerce, GRZ
		Hold engagement meetings with the LA aimed at restructuring business licensing fees and normalization of informal businesses.	Entire District	0	20	4	4	4	4	Kabwe municipal Council/CEEC
		Conduct a verification exercise of informal businesses	Entire District	0	2	1	1	0	0	Kabwe municipal Council
		Conduct engagement meetings with informal business owners on the need to formalize business	Entire District	0	20	4	4		4	Chamber of Commerce, GRZ

Objective 13: To reduce illegal trade in wildlife products by 2027											
Opening up legal selling game meat outlets	Engagement with Game Ranch owners /Identification of selling points	Meetings with game ranch owners	Town Centre , Luangwa Township, Makululu, Mukobeko, Highridge, Katondo, Bwacha, Chimanimani, Chidwin Barracks, Zambia Railways Compound	0	18	3	3	4	4	4	DNPW, KMC, GAME RANCH OWNERS
		Community Sensitization/ meetings with the KMC		0							DNPW, KMC, GAME RANCH OWNERS
	Objective 14: To improve on law enforcement manpower										
Recruitment of Wildlife Police Officers	Training of Wildlife Police Officers	Advertise for recruitment of wildlife police officers on behalf of MOT	Entire District			1	1	1	1	1	DNPW, MOT
		Collect applications on behalf of MOT									DNPW KABWE
		submit applications to MOT									
To procure more vehicles to enhance the operations of DNPW	Procurement of motor vehicles	Monitor procurement progress				1	1	1			GRZ
	Objective 15: To provide accommodation for Wildlife Police Officers										
Conservation education	Conservation education on the importance of wildlife and sensitization on hunting processes	Radio programs talk and music shows wildlife magazine distribution	Entire Kabwe District	0	4	1	1	1	1	1	DNPW, MOT

Offering grants	Objective 14: To empower 1,020 youths, women, and disabled (Cooperatives, Clubs, Associations, and Organized Groups) by 2027										
	Empowerment	Offering of 1,020 grants to Organized Groups	All wards	120	1,020	120	150	200	250	300	GRZ, KMC
Skills development	Objective 15: To empower 2,016 youths with skills development under TEVETA by 2027										
	Empowerment	Training of 2,016 youth by TEVETA approved Schools	All wards	316	2,016	316	350	400	450	500	GRZ, KMC

4.3 Human and Social Development

The Strategic Development Area Human and Social Development will focus on addressing the core issues highlighted in the Planning Survey and Issues Report such as inadequate access to quality, equitable and inclusive education, safe water and sanitation services, high poverty levels, unemployment among youths who constitute a large proportion of the District's population. The development interventions highlighted under this SDA will therefore address these challenges and improve the welfare of the people of Kabwe in line with the 8NDP theme of, "Socio-economic Transformation for Improved Livelihoods". Table 3.3.1 highlights the objectives, strategies, program priorities and Targets under the Human and Social Development;

Table 47: Human and Social Development (8NDP Pillar 2)

Development Framework - : Human and Social Development (8NDP Pillar 2)											
Strategy	Program	Activities	Location	Baseline	Target	Target Year					Resp. Agency/Dept
						2023	2024	2025	2026	2027	
Objectives	ENHANCE ACCESS TO QUALITY, EQUITABLE AND INCLUSIVE EDUCATION BY 2027										
Improve on staffing levels	Teacher Deployment	Deployment of 1490 teachers in the district.	Across the district	0	1490	75	355	355	355	350	MOE
Promote Adult Literacy Program	Adult Education/Adult Literacy	Opening of 25 Adult literacy Education Centers	Munyama and Chinyanja	14	25	6	6	4	5	4	MOE
Promote Early Childhood Education	Early Childhood centers	Establishment of 16 more Early childhood centers in 16 primary schools	Justine Kabwe,Waya,C hililalila,Nakoli, Bwacha, Kawama,Bwacha,Chimanimani, Kalonga,	43	16	2	4	2	4	4	MOE

			Kasitu, Muwowo, East, Luangwa								
Promote Inclusive Learning and education	Special Education Centres	Establishment of 8 more special education centres	Mine, Grace Christian primary school, Kawama primary school, Munga primary school, Nakoli primary school	17	8	2	1	1	1	3	MOE
ICT Promotion	IT equipment	Procurement of 300 computers in schools	Across the district	0	300	60	60	60	60	60	MOE
Constructio n of staff houses	Infrastructure Development	To construct 900 staff houses in the district by 2027	Across the district	0	900	100	200	200	200	200	MOE
Rehabilitatio n of all dilapidated infrastructur e	Infrastructure Development	Rehabilitation of DEBS office premises	DEBS Office	0	1		√	√	√		MOE
		Rehabilitation of 100 existing schools at all levels of education in the district	Across the district	0	100	20	20	20	20	20	
	Infrastructure development	Construction of 4 boarding secondary schools in the district	1 at Kafulamase 1 at Munga 1 at Kang'omba and 1 at nyenyezi	0	4		√		√		MOE
Constructio n of new schools	Infrastructure development	Construction of 2 primary schools	Kasavasa - waya	59	2		1	1			MOE
	Infrastructure development	Construction of Kawama Primary school	Kawama	0	1		1				MOE
Constructio n of an independent	Infrastructure development	Construction of an independent day secondary school at	Kasanda Malombe	0	1		1				MOE

school structure		Kasanda Malombe primary school									
Enhance access to safe Water and sanitation Is	Infrastructure development	Construction of ablution blocks in schools.	All Wards	0	100	10	20	30	25	25	MOE
		Drilling of boreholes and establishing Piped Water schemes	All Wards	0	100	10	20	30	25	25	MOE
Constructio n of school Hall	Infrastructure development	Construction of school halls in 2 Secondary schools	Danford Chirwa and Raphael Kombe	0	2		2				MOE
Constructio n of classroom blocks	Infrastructure development	Construction of 6X3 classroom blocks in 3 primary schools	Nakoli, bwafwano, Nkruma Ext	0	6		2	2	2		MOE
Procurement of desks	School Furniture	Procure 65000 desks in all schools	All schools in the district	0	65000	2,800	16,142	16,142	16,142	16,144	MOE
Constructio n of lab facilities in schools	Infrastructure development	Construction of 3 laboratories in the 22 respective Schools in the district.	All Dsistrict	6	66	10	14	14	14	14	MOE
Objectives	Improve sanitation coverage from 70% to 90% by 2027, Increase solid waste collection and disposal from 40% to 70% by 2027 Recycle 25% of all solid waste collected by 2027										
Maintenance and rehabilitatio n of sanitation infrastruc ture	Infrastructure development	Maintenance/ rehabilitation of sanitation facilities at the following markets:	Pollen (1), Njanji (1), Kachulu (1), Kamushanga (1), Mukobeko (1), Kasanda (1), Mine (1), Green Market (1)	0	8	2	2	2	1	1	Local Authority, GRZ
Maintenance of sanitation infrastruc ture	Infrastructure development	Maintenance of sanitation facility at Kabwe Intra bus station	CBD	0	1		1				Local Authority

Community Sanitation and Hygiene promotion	Sanitation and hygiene promotion	Intensify sensitization and demonstrations in sanitation and hygiene promotion	All the 29 Wards	12	60	12	12	12	12	12	KMC, GRZ
Emptying of On-Site Sanitation Facilities	Fecal Sludge Management	Sensitization and Orientation Training of Empties	All the 29 Wards	0	145	29	29	29	29	29	KMC, GRZ
		Procurement of EVAC, Tools; PPE's and Chemicals	All the 29 Wards	0	29	9	10	10			KMC, GRZ
		Procurement of Vacuum tanker	All the 29 Wards	1	1		1				KMC, GRZ
Enhancement of solid waste management coverage	Solid Waste Management	Procure skip bins	CBD	6	10	2	2	2	2	2	KMC, GRZ
		Procure a Compactor truck		0	1		1				KMC, GRZ
		Procure 2 tipper trucks		0	2	1			1		KMC, GRZ
		Procure a Tractor Load Backhoe		0	1	1					KMC, GRZ
		Procure a Front End Loader		0	1	1					KMC, GRZ

	management										
Forestry management	Forest protection and management	Formation of 50 CBNRMG to practice sustainable utilization of natural Resources	All Wards	0	50	10	10	10	10	10	Forestry Department
Forestry extension	Forest management	Conduct 290 community mobilization and awareness meetings on CBNRM	All Wards	1	290	58	58	58	58	58	Forestry Department
Forestry extension	Forest management	Conduct training of 50 CBNRMG on sustainable utilization and management of natural resources	All Wards	0	50	10	10	10	10	10	Forestry Department
Law enforcement	Forest protection and management	Eviction of 20, 000 squatters from forest reserves in the District	All Wards	0	20,000	4, 000	4, 000	4, 000	4, 000	4, 000	Forestry Department
Law enforcement	Forest protection and management	Identification and preservation of 10 water recharge points in the district	All Wards	2	10	5	5				KMC, WARMA
Objective	To remediate lead poisoning by 2027										
Remediate lead poisoning	Lead Poisoning and Prevention	To conduct tree/grass planting od 1500 plants in the District	Former Mine Areas	0	1500	200	250	300	350	400	KMC (ZMERIP)
		Conduct 50 community lead poisoning Sensitization	Former Mine Areas	0	50	10	10	10	10	10	KMC (ZMERIP)

2.11 Good Governance Environment

The Strategic Development Area on Good Governance Environment seeks to promote adherence to the rule of law, transparency, accountability, consensus-building, responsiveness, equity, inclusiveness, effectiveness and efficiency in service delivery. This Strategic Development Area will also entail enhanced participation of women, youths and Persons with disabilities in driving the development agenda of the district. District structures such as the District Development Coordinating Committees and Ward Development Committees will provide a platform for enhanced participation and decision making in fostering decentralization in a coherent manner. The table highlights the Objectives, strategies, program priorities and Targets Good Governance Environment

Table 49: Good Governance Environment (8NDP Pillar 4)

Objective	To upgrade 14 informal settlements by 2027										
Servicing of unplanned Settlement areas	Informal settlement upgrading	Registration and numbering of properties in informal settlements	Makululu, Moomba, Zambezi, Kachulu, Makwati, Katondo, Chikwata, Luansase, Kawama,	8,500	7,500	1,500	1,500	1,500	1,500	1,500	KMC, MEDEEM

Servicing of unplanned Settlement areas	Servicing of unplanned Settlement areas	Extension of water pipes for 5000 households by Lukanga Water and Sewerage Company	Makululu, Moomba, Zambezi, Kachulu, Makwati, Katondo	1400	5000		1000	1500	1500	1000	Lukanga Water
		Extension of power lines for 1500 households electricity	Makululu, Moomba, Zambezi, Kachulu, Makwati, Katondo	300	1500		500	500	250	250	Lukanga Water
		Grading of roads 360km	All Wards	0	360		80	100	100	80	KMC, RDA, ZNS
Objective	To develop an integrated information land management system by 2027										
Introduction of E-planning permission	ICT infrastructure development	Setting up of ICT infrastructure system	KMC	0	1		1				
Establishment of a GIS unit	ICT infrastructure development	Installation of GIS Software	KMC	0	1		1				KMC,
		Network configuration	KMC	0	1		1				KMC, GRZ
Increase transparency and accountability through E-Payment system	E-Levy Revenue system	Procurement of Point of Sale Machine, procurement of paper for receipting	KMC	0	1		1				KMC, GRZ SMART Zambia
Objectives	To increase the availability of firefighting and rescue services to 60% of the population by 2027										

The Local authority in conjunction to undertake firefighting and rescue services in the urban and rural areas	Fire prevention and Rescue	Expansion and rehabilitation of existing fire services infrastructure	All wards	0	1	1					Fire and rescue
		Building of a new fire station	All wards	0	1		1				Fire and rescue
		Acquisition and replacement of firefighting equipment	All wards	1	2		1	1			Fire and rescue
		Community sensitization on fire safety trainings	All wards	0	29	6	6	6	6	5	Fire and rescue
		Formulation of fire prevention committees	All wards	0	29		29				Fire and rescue
Objectives	To improve rule of law and order by establishing a Fast track Court and construction of a police station 2027										
Improve rule of law and order	Infrastructure Development	Construction of 6 police station	Kaputula, Waya, Mukobeko, Kawama, Pollen, Makululu,	0	6				1		Council/Home Affairs
		Construction of police station houses at proposed Mpima Police Station		0	100	20	20	20	20	20	
		Construction of 4 Police Posts	Kasabasa, Munyama, Kakonde, Shakumbila	0	4	1	1	1	1	1	
		Completion of Katondo police post	Katondo	0	1	1					

		Completion of Mangandanyama police post	David Ramusho Ward	0	1	1					
	Fast Track Court	Establishment of a Fast Track Court	CBD	0	1	1					
	Development Control	Conduct Field inspections	Across the District	500	1500	350	350	350	350	350	KMC

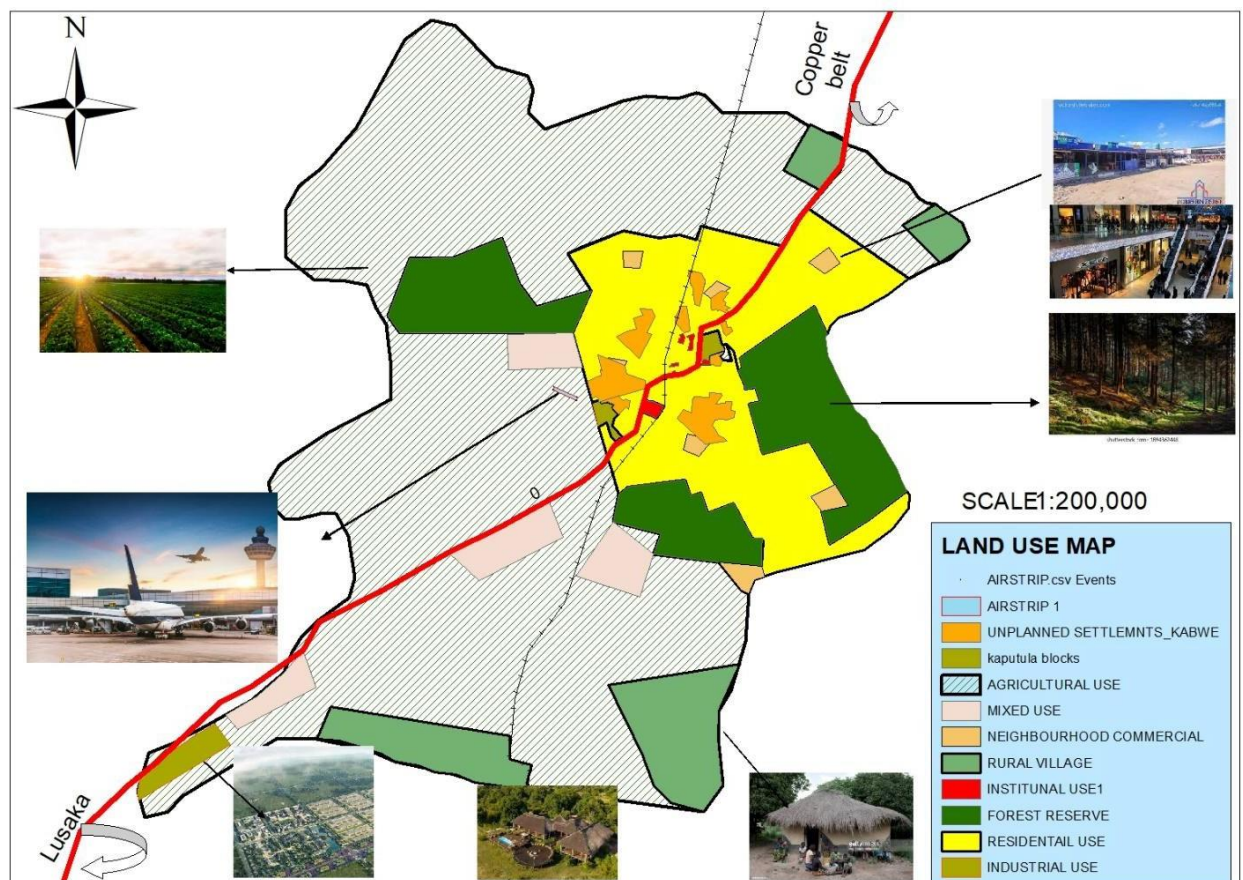

4.5 SPATIAL DEVELOPMENT FRAMEWORK

4.5.1 Introduction

The Spatial Development Framework aims to promote sustainable functional and integrated human settlements, maximize resource efficiency, and enhance regional identity and unique character of a place. Strategic spatial planning methods aim to address issues regarding rapid urbanization. These methods should allow evaluating the territorial qualities of the system of cities and to meaningfully guiding the implementation of national urban policies or strategies.

The land use plan for Kabwe is shown in figure 84 clearly describes the spatial distribution of the area and its respective uses. The major land uses in the IDP area are the build environment that covers much of the spaces in centers and sub-centers, the water bodies and water-logged areas, forests and parks, and agricultural lands that cover much of the higher grounds in the region.

Figure 74: Kabwe Land Use Map

Spatial development and land use control promotes greater urban structure with satellite towns, regional integration with regional development, well planned and manageable land use to accommodate the population increase and economic expansion during next two decades. Concepts and Strategies for Spatial Development are dedicated to the spatial planning vision of a sustainable spatial development which reconciles the social and economic requirements to be met by the space with its ecological functions and results in a system which is permanent and regionally balanced and provides for a convergence of living standards in areas.

4.5.2 Parameters to be considered in the spatial concepts

4.5.2.1 *Demographic factors:*

As a consequence of demographic change it is necessary, above all in stagnating and shrinking regions, to focus even more intensively on regional development potentials, modernization, conversion and deconstruction as well as on the management of the building stock in the course of the development of the settlement structures and infrastructures as well as for the provision of public services. At the same time, it is essential to improve the spatial outline conditions for such regions where towns are particularly affected by in- and outmigration from other parts of Province/nation and from abroad. In this connection, it is also necessary to include and observe the challenges and opportunities of migration and integration.

4.5.2.2 *Climate change*

Avoidance and mitigation strategies as well as adaptation measures to the expected climate change must be taken up in spatial planning. The stakeholders of spatial development are increasingly called upon to cooperate in ensuring an integrated development of settlement and traffic areas which results in energy savings and the avoidance of traffic, to take precautionary action to cope with growing natural risks and to make the energy supply more climate-friendly.

The conflict between land-use and protection requirements is steadily increasing. Spatial planning must pay greater attention to its task of coordinating and reviewing the various spatially significant plans. Especially the reduction of the use of new land for settlement and traffic purposes remains a core task of sustainable spatial development.

4.5.2.3 *Stakeholder participation*

For an effective public participation, transparency is needed, that means that comprehensive and comprehensible information about projects, their consequences and procedural steps must be provided in due time. The existing instruments of public participation are to be further developed - to the extent appropriate - with the objective of achieving a broad public acceptance of the procedure

4.5.2.4 **Spatial Development Models**

During the IDP planning period 3 scenarios have being discussed which elaborate strategies on how to achieve development in the district. The following are the scenarios discussed:

- **Urban Growth Management:** Urban growth Management model seeks to ensure that population growth is matched by access to basic infrastructure, shelter, and employment. Long term planning for cities and towns including housing, infrastructure, employment, and social services is central to effective Urban Growth Management and essential for establishing attractive, affordable, sustainable, well serviced communities with access to employment opportunities. The model focuses on how the town is being managed in a sustainable manner taking into consideration natural resources which act as a cushion to haphazard kind of development.
- **Improved transportation system:** Good transport connections have direct benefits to people, businesses, the environment, and the overall economy. This model discuss transportation in relation to its efficiency in the provision of economic and social opportunities and benefits that result in positive multiplier effects such as better accessibility to markets, employment, and additional investments.
- **Environment Protection and Green Network Development:** this model focuses on environmental protection that is aimed at maintaining (and recovering when necessary) a healthy natural environment. Sustainable development embraces environmental, social and economic objectives, to deliver long-term equitable growth which benefits current and future generations. Environmental protection itself contributes to economic growth and takes into consideration issues relating to climate change mitigation and adaptation measures.

4.5.2.5 **Urban Growth Management Model**

Long term planning for cities and towns including housing, infrastructure, employment, and social services is central to effective Urban Growth Management (UGM) and

essential for establishing attractive, affordable, sustainable, well serviced communities with access to employment opportunities. This will guide development of cities and towns towards desired patterns of growth. Urban growth management in Kabwe will be achieved through effective urban growth control and intensive infrastructure provision in the guided Urban Development Promotion Area by appropriate administration against inadequate urban sprawl, while other area will be strictly controlled. Intensive infrastructure development main focus points will be the Multi facility Economic zone and the industrial park along great North road which will act as growth points for development in the district. Mpima forest block 11 in Kangomba, Mpima forest No. 31 and surrounding Kabwe farms will act as a cushion preventing further settlement growth towards Chibombo District area and Kapiri Mposhi District on the other side.

4.5.2.5.1 Approaches to action

The following are the strategies that will guide the urban growth management model;

- i. Minimization of the need for expansion of urban areas through better use of land in existing urban areas and at the urban fringe ·
- ii. Improved use of natural resources and reduction of the ecological footprint · Developing vibrant mixed use communities ·
- iii. Coordination of development and sequencing of land release with social and physical infrastructure delivery ·
- iv. Spatial design and land use mix to minimise greenhouse gas emissions · Addressing the impacts of climate change on urban development Ensuring the availability
- v. Land banking and land assembly mechanisms (i.e. government or private sector land ownership in key areas to improve growth management) ·
- vi. Integrated land use and transport planning coordination and effectiveness of a set of UGM tools

4.5.2.6 Improved Transportation System Model

Transportation demands management plans, schemes, techniques, programs, and methodologies for minimizing transportation facility demand, such as improved transit

service, off-peak travel, and ride-sharing programs. The ultimate aim of urban transport planning is to generate alternatives for improving transportation system to meet future demand and selecting the best alternative after proper evaluation.

Noting that the Headquarters of Zambia Railways Limited is Kabwe, the district during its IDP implementation period has focused on improving and introducing an intra railway system. Further, the district will aim to improve the bus route system during the implementation.

4.5.2.6.1 Rail line infrastructure strategy

The railway network in the district plays a key role in promoting economic growth and social development in terms of income and employment opportunities. The railway system in Kabwe has potential in attracting new businesses and facilitation for international transportation of goods and services mainly because the district is a transit town and centrally located allowing the flow of goods and services within and out of the country.

Railways have been one of the key modes of passenger and freight transport since the mid-19th century and continues to play an important role today. Kabwe district has a rail line network of about 40-50 kilometres. The district approach to railway transport focuses on:

- i. Increase capacity to carry goods for the district to the industrial establishments for the next projection of 10 years from 2023 to 2032.
- ii. Modernize the rail network system of interconnectivity through a particular area within the district.
- iii. Tackle congestion from the main trunk road as an alternative mode to goods transportation.
- iv. Support relative adjacent developments to the rail developments.
- v. Improve the quality of rail crossings along the main roads causing traffic slow down.

The minimum strategy focuses on full modernization of the existing rail infrastructure and developing the necessary capacity on key freight corridors to meet the needs of the economy and population. New areas of economic growth will be served and some freight-only and high-tech lines constructed. This includes the long-envisaged high-speed line that would pass through Kabwe, while elsewhere the construction of new lines will

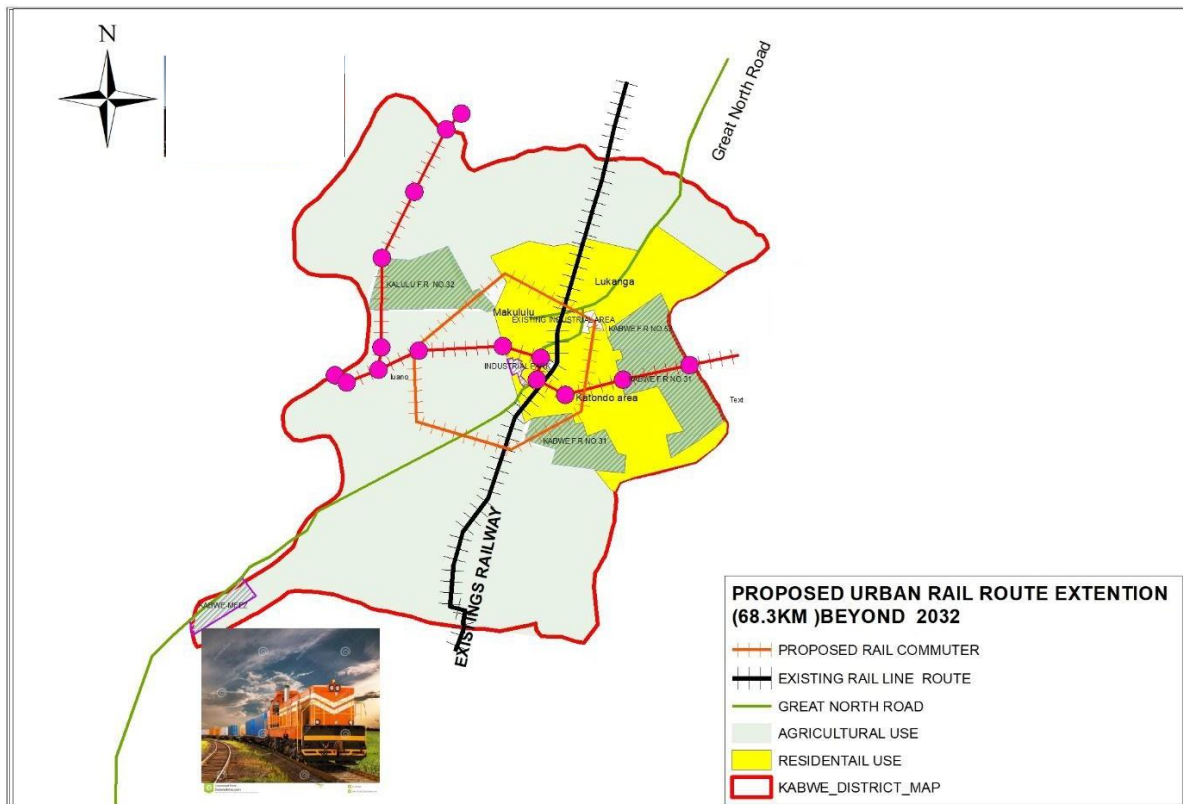

focus on strategically important routes, such as those which open up new townships to improve links between the districts.

It would ensure a modern level of infrastructure development and provide transport to open up areas of natural resources around the central province. Unlike road freight, rail transport is not subject to traffic jams, and stoppages of train services only occur in the event of breakdowns of trains or infrastructure. The condition of rail infrastructure allows trains to reach high speeds, the possibility of transporting bulky goods, the train is the perfect solution when it comes to transporting large items.

The figure below shows proposed rail transportation routes that will enhance rail transportation thus fostering an environment to support private sector engagement. As illustrated in figure 3.4.3 a proposed route facilitating transportation of goods and services from neighbouring districts ie Ngabwe, Chisamba, Chibombo, Luano will enhance commerce and trade sector thus offering opportunities to local economic development in the district. Industrialisation in the district through the industrial park and MFEZ situated along great North road stands to benefit from the proposed rail routes in terms of goods and services being produced from the facilities.

Kabwe being dominated by agricultural land stands to benefit from the proposed rail route as a means of transportation of agricultural based produce. The district has well- developed commercial farming areas within the district radius of about 30 km from the town centre producing maize and wheat, and a good road and rail links that provides easy transportation to markets in the townships of Kabwe and existing local institutions as well as on the Copperbelt and Lusaka. Evidence to the development in the agricultural industry of Kabwe district is the establishment of the Mpima Dairy Scheme which processes dairy produce (360ltrs of milk daily production, 8000x 50kg maize bags annual production, soya beans 20000x 50kg bags annual production) and Chankwakwa who are in the value addition business of fruits locally grow mangos and guavass. In terms of production figures production at Chankwakwa mangoes 10-20tones /yr, oranges 5 tones/yr, guavas 5 tons/yr, lemons 5 tons/yr, chilli 1 ton/yr, tomato 10 tones/yr, pigs /year, cattle 100-200/yr. In this regard, future public investments in rail transport in the district should be developed upon commodity exports and imports with limited in-country manufacturing and assembly being coupled with an abundant mix of extractive industries.

Figure 75: Proposed Urban Rail Route Extension

4.5.2.6.2 Bus routes Improvement

Kabwe district has a road network of about 600 kilometres and 90% of these roads are gravel. Of these district roads, Kabwe holds a trunk road which is the great north road and it passes through the heart of the town. This Trunk Road stretches to a length of about 40 to 50 kilometre across the main district boundary. From this main trunk road (T2) which is a high way many major roads branch into the district townships. From these main roads of the various Township, minor roads branch of forming various streets of specific neighbour hoods

Challenges and objectives relating to transport network in Kabwe is illustrated in the table below:

Table 50: Challenges relating to the transport network in Kabwe

Challenge	Overall Objective	Specific Objectives
Poor road network Inadequate Funding Poor district intra railway transport system Poorly coordinated bus routes Poor drainage system	Six Hundred Kilometer (600km) Road Infrastructure development by 2032	Cover the entire district with passenger transport services
		Provide access road for vehicles in all communities
		Develop road network for quick access within the city
		Reduce traffic accidents
		Manage and control traffic flow under good condition
		Provide safe and comfortable pedestrian routes
		Provide access to new industrial zones
		Connect the new urban area with good transport system
		Relief traffic congestion
		Connect the new urban area with good transport system
		Provide transport terminal for smooth transfer
		Improve deteriorated roads and streets
		Promote non-motorized transport Reduce vehicle emission Enriched quality of life Equal accessibility for all citizens Safe and pleasant transport system Sustainable Economic Development

In terms of passenger transport services for local movements coverage within the CBD and areas surrounding the CBD ie Luangwa, Highridge, Lukanga, Katondo, waya, Justine Kabwe, Kabudula, Kalonga; buses and taxis are readily available to ferry passengers with fairly good road network in areas nearer to town and poor road network as we go further away from the urban centre. Passenger transport network is a challenge in the rural wards ie, Munga, Munyama, Chinyanja due to poor road network hence most taxis and busses opt not to reach the far flung areas. Most affected areas include Munga ,Chinyanja and Munyama according to the social survey done which revealed residents of these areas rely on trucks owned by some farm owners as the only mode of transport.

Access routes roads for vehicles in communities is a bigger challenge than in the urban centres. An attempt to address this challenge is the construction of minor roads/ grading of roads in these areas and rehabilitate roads that are in deplorable state in urban centres in order to ensure quick access within the district. Figure 3.4.1 shows the existing road network plan in relation to the bus route plan of the district.

An attempt to overcome transport deficiencies in the district starts with a properly coordinated bus routes. The bus given today's limitations offers the principal hope that mobility can be improved for the majority of urban residents. Local bus routes are insufficient with district experiencing massive congestions within the CBD and along the Great North Road. The congestions are mainly caused by

the trucks and busses that pass through the district.

The District has 2 existing intercity bus stations that are privately owned. The Municipality is currently constructing an intercity bus station in Lukanga area and has an operational intra bus station in Green Market, town centre.

The bus route plan exhibits an integrated approach to bus transportation that includes the highway traffic control, the vehicle fleet and its management. Access routes to various development zones ie industrial, residential, commercial, agriculture and institution can only be achieved through a well-planned road network system.

An attempt to decongest the Great North Road as vehicles are entering the CBD from ZNS is illustrated in figure 87 which shows the bypass road which diverts from the Great North Road 4.8km from the Kabwe Municipal Council Motel towards Fig Tree Café and passes through Mpima Forest block 11 in Kangomba area, Mpima Excised forest No. 31 and exits through Mpima Seminary Mission road to reconnect into Great North Roads towards Kapiri Mposhi.

On the other side of the great North road the proposed bypass road branches off 500 m from Mulungushi University into Kabwe Farms and exits from Prospect area. Additionally an expansion of the Great North Road that passes through Kabwe Town shall be embarked within the IDP plan period. Road network plan and bus network plan and traffic projection results in 2015, 2020 and 2030 are illustrated in the Figure below. To cope with the traffic congestion anticipated in 2033, mass transit development will be necessary.

Figure 76: Road and Bus Network Plan

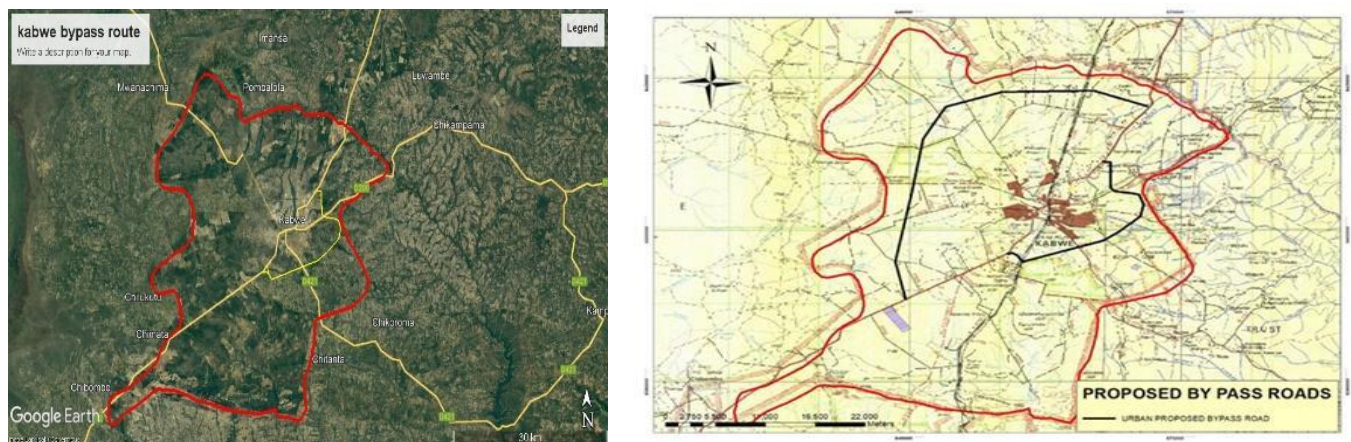

Figure 77: Bus Route Plan by 2033

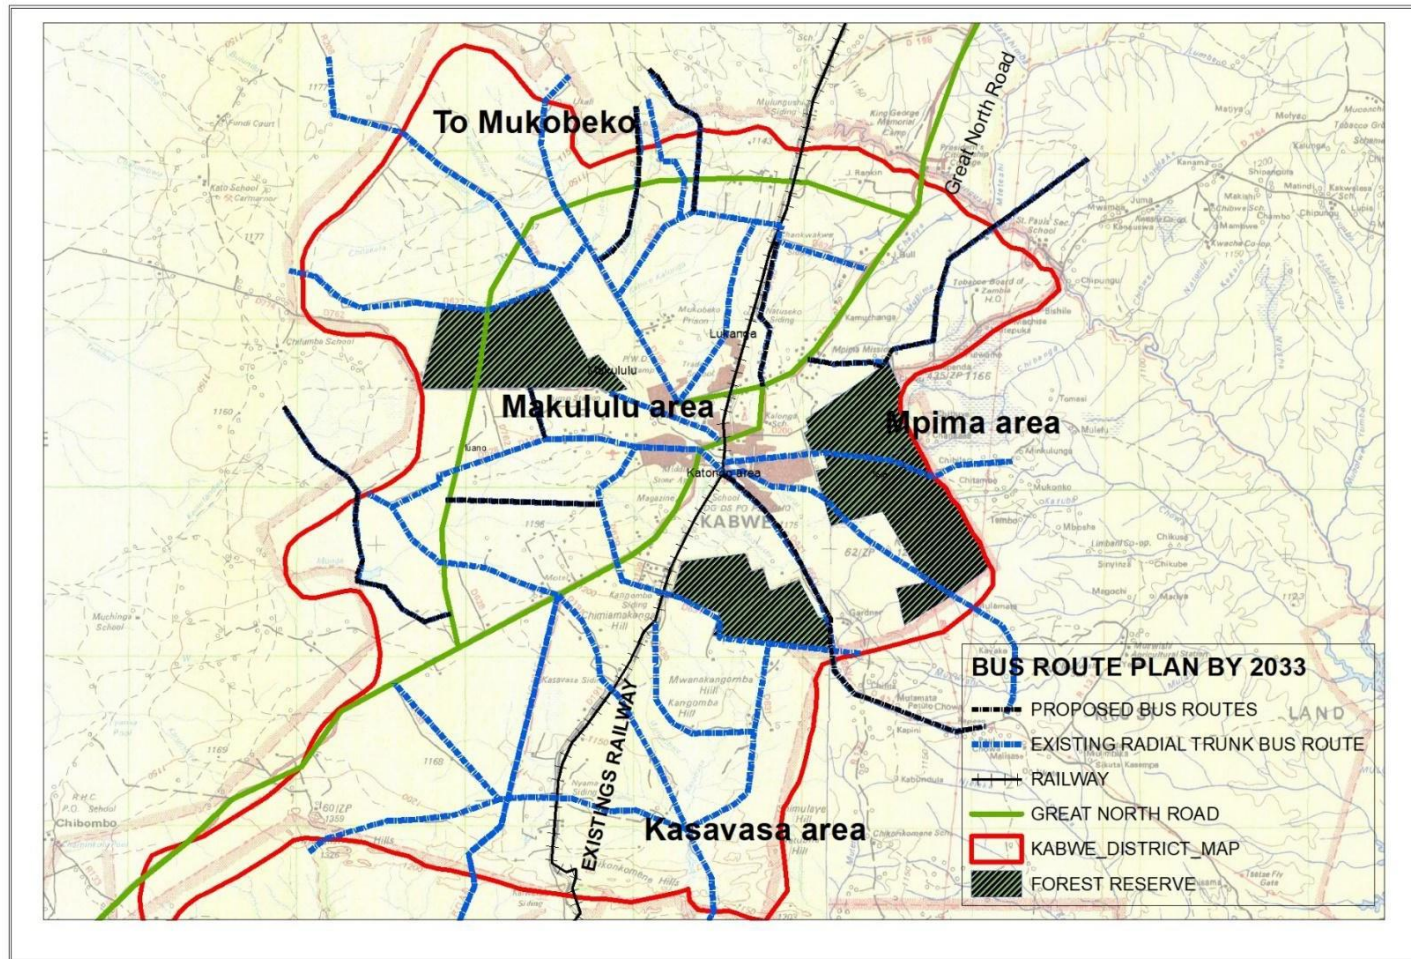

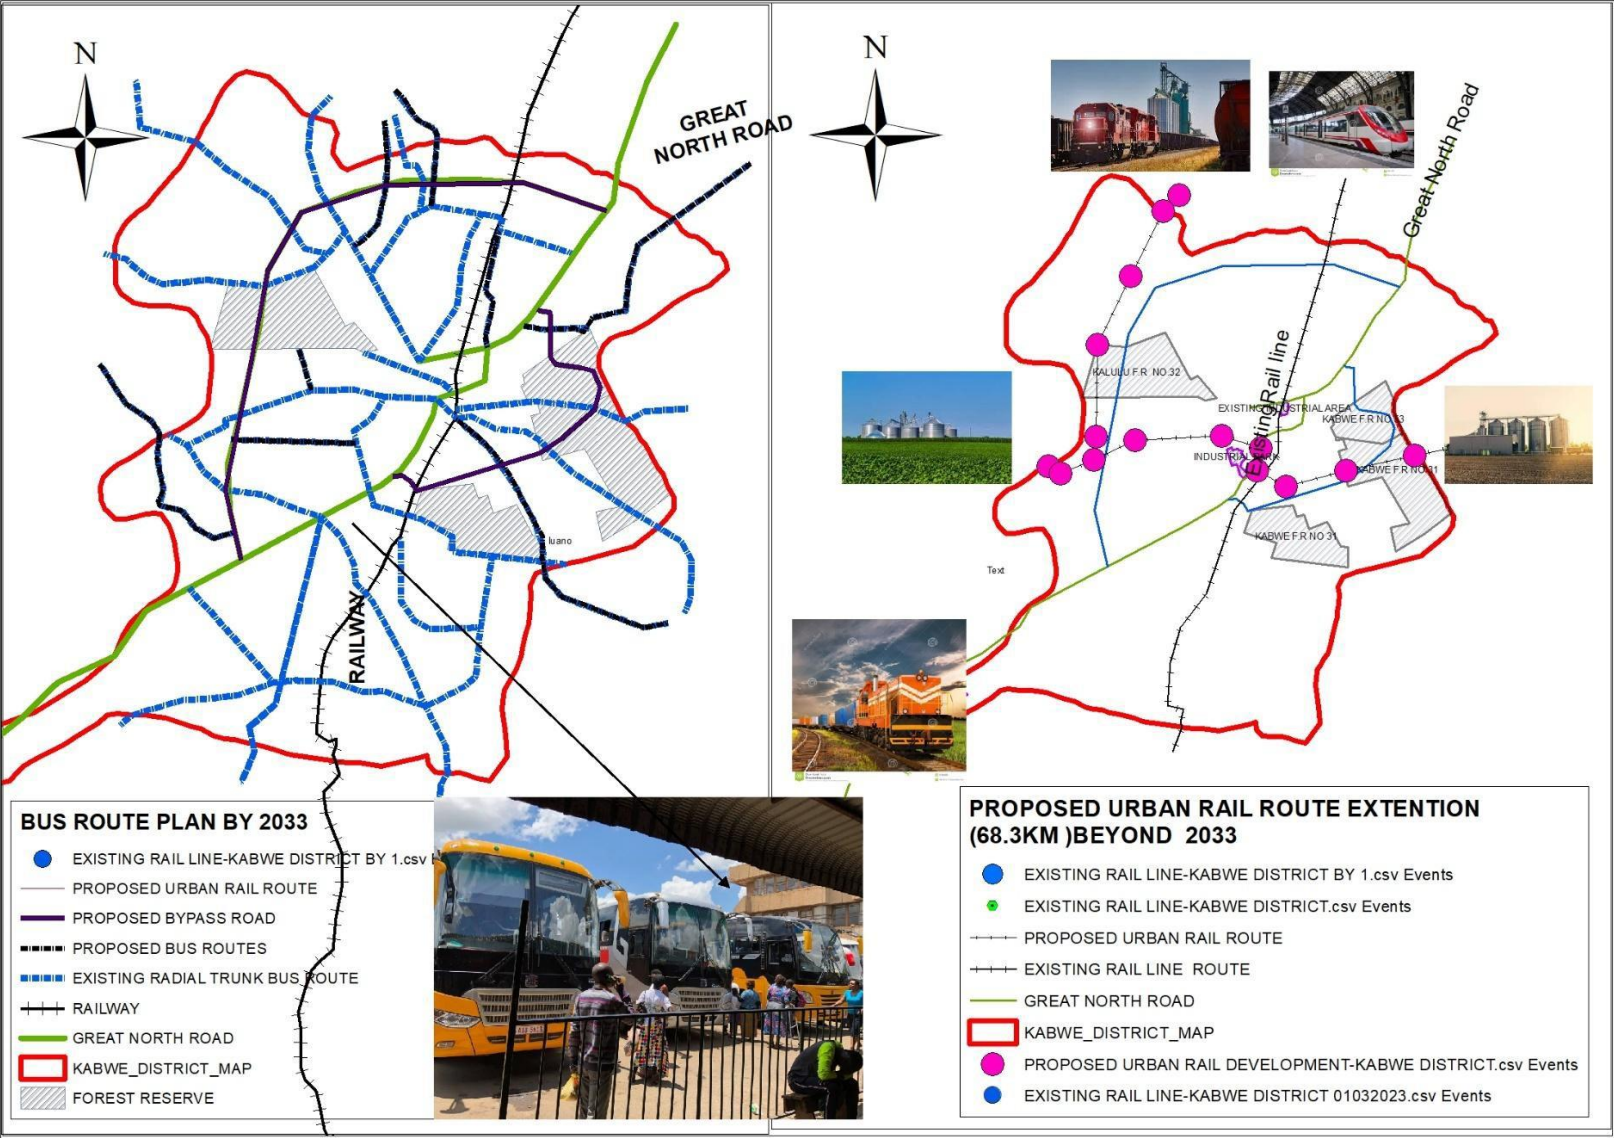

Figure 78 : Bus and Rail Route Extension

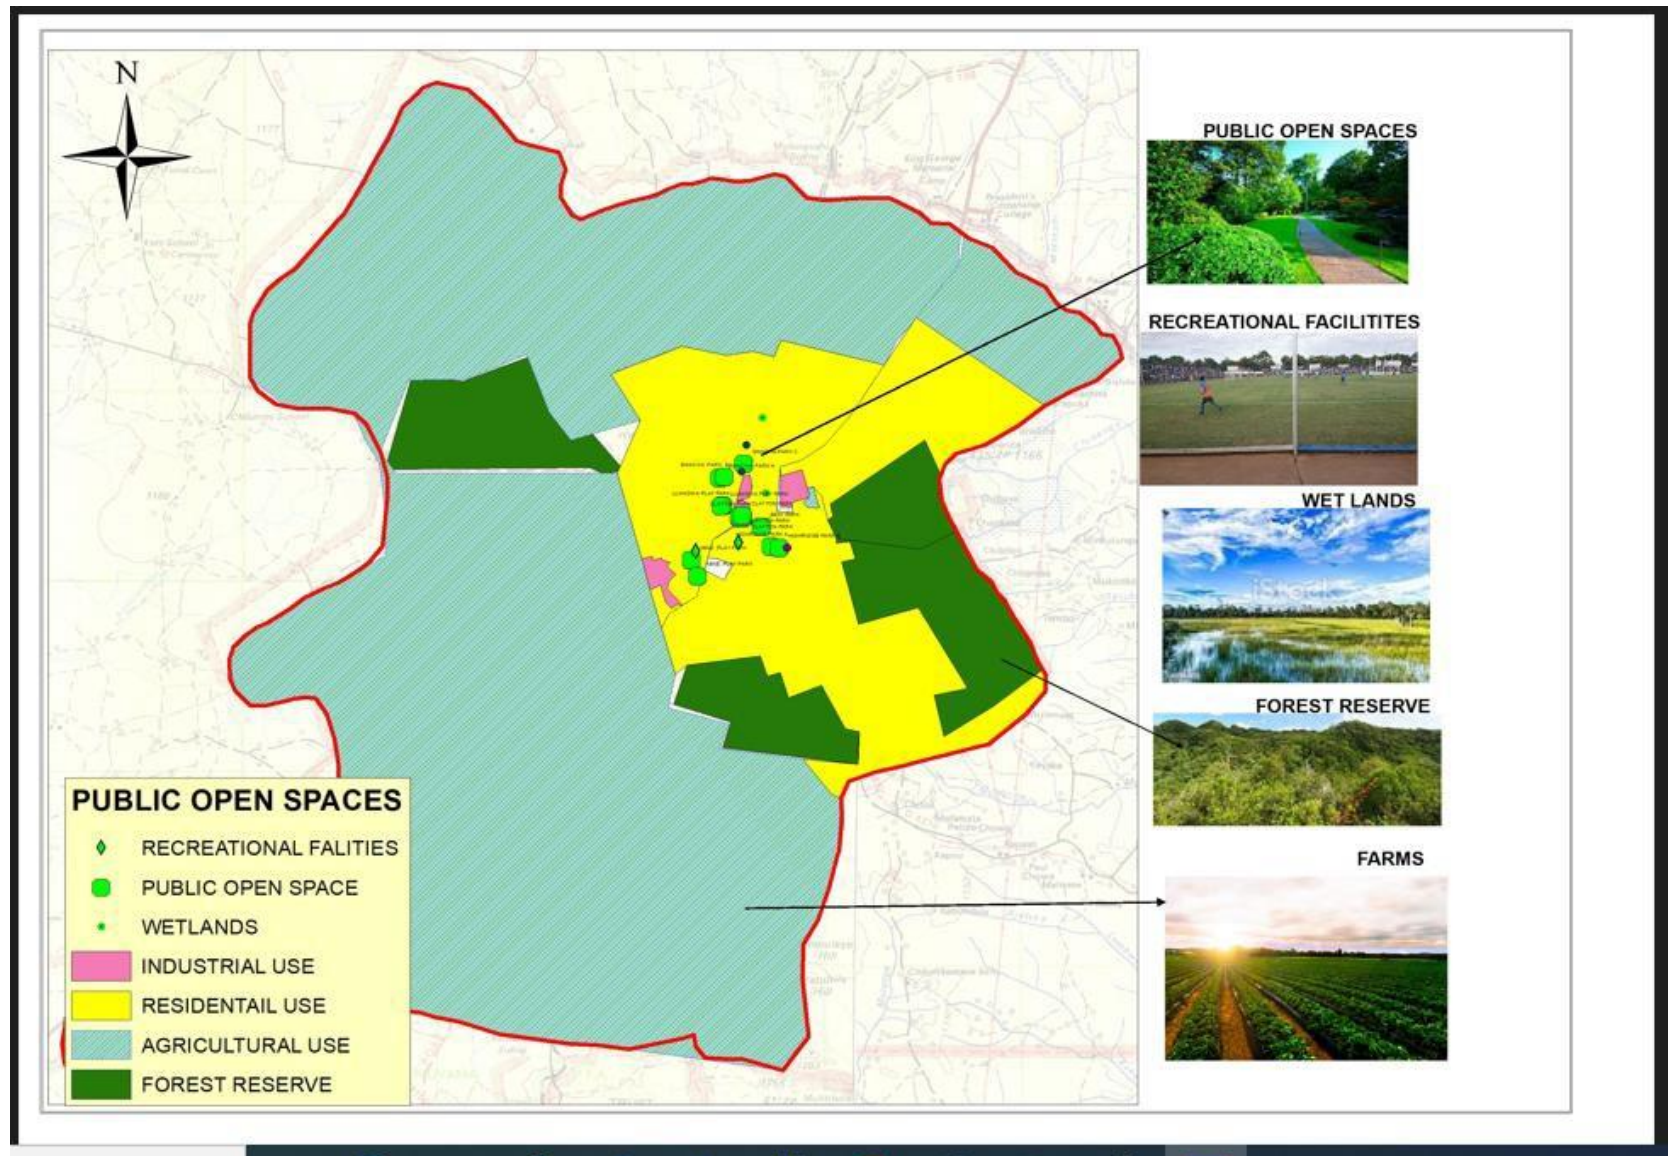

4.5.2.7 Environment Protection and Green Network Development Models

The quality of life in urban areas depends a lot on the quality of the local environment. It is dependent on the quality of the air and water, access to nature and biodiversity, levels of noise pollution, and increasingly, the ability to keep cool as temperatures rise. Towns are places where most resources are consumed and where many environmental challenges are found. At the same time they offer opportunities to tackle environmental issues, with people living and working closer together, managing and sharing resources efficiently using the principles of the circular economy, reducing the need for private motorised transport, and living in more energy efficient buildings.

Kabwe has a lot of potential natural resources eg Mpima forest reserve, Kalulu forest, Lukanga swamps, Mulungushi dam, hence the need for a strategic approach in order to achieve effective environmental protection. The following strategies have been formulated to achieve effective environmental protection;

- To formulate a green belt zone, maintaining mainly agriculture land and other natural green spaces functioning as a buffer for urban sprawl and environmental and recreational network.
- Formulate spatial network for urban green environment (open spaces, sub urban agriculture built and recreational activities (parks and walkways or cycling lanes)
- To provide urban environment protection and green management programme in order to formulate strategic interventions for environmental protection.
- To establish sustainable urban design in order to protect the destruction of natural reserve forests and damage of natural habitats and biodiversity.
- To empower local communities activities in a participatory manner for the environment improvement, especially for waste management and energy (charcoal) issues.

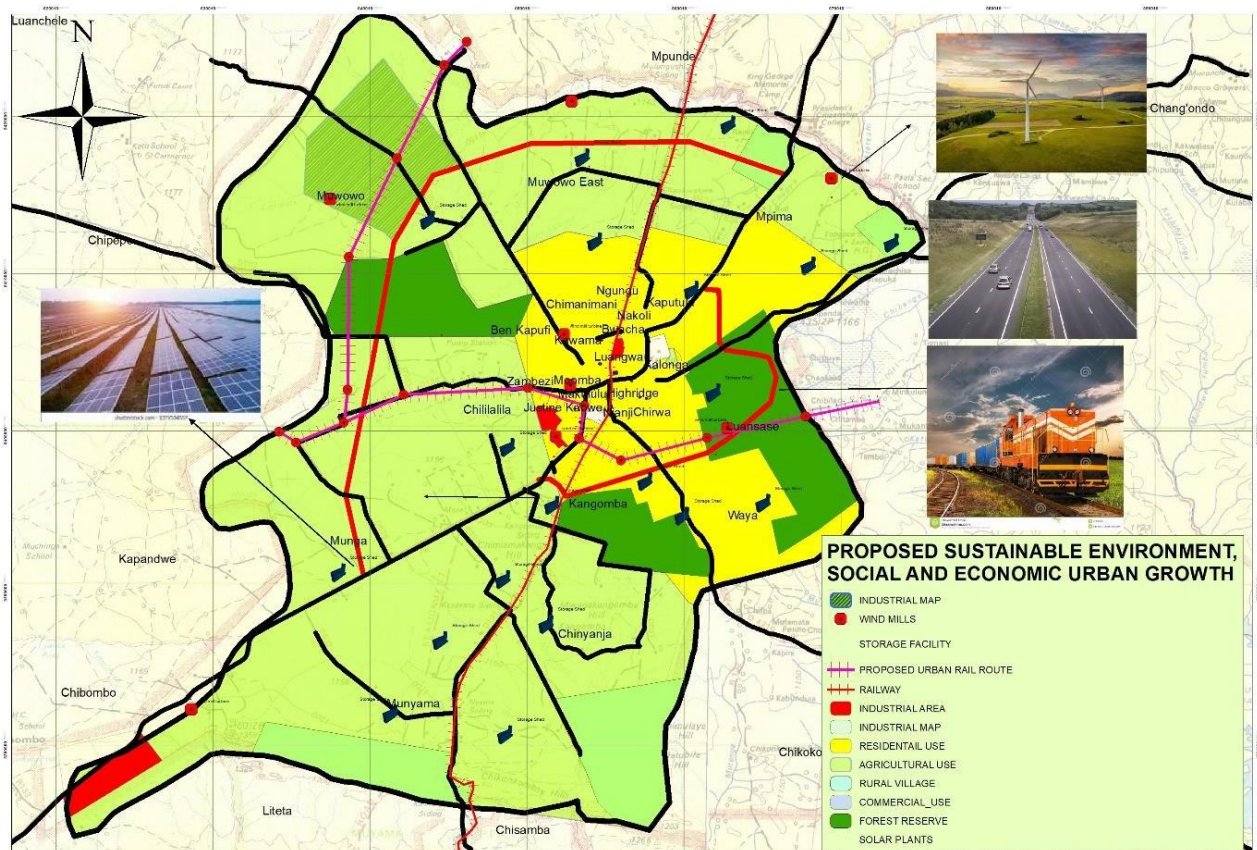

Figure 79: Public Open Spaces

4.5.2.8 Chosen Development Scenario

The 3 models discussed have one common factor which is sustainable development. The chosen scenario is a combination of the three models discussed. The rationale behind the chosen scenario is the achievement of sustainable development through Sustainable environmental, social and economic urban growth as a means to develop Kabwe district within the Integrated Development Plan period. The combination is being used as a means to ensure environmental concerns, economic concerns and social equity concerns are all encompassed on the model chosen for development of the district. A map illustrating the combination of the 3 models is shown as figure 3.4.1.3.1 which shows the various scenarios discussed above.

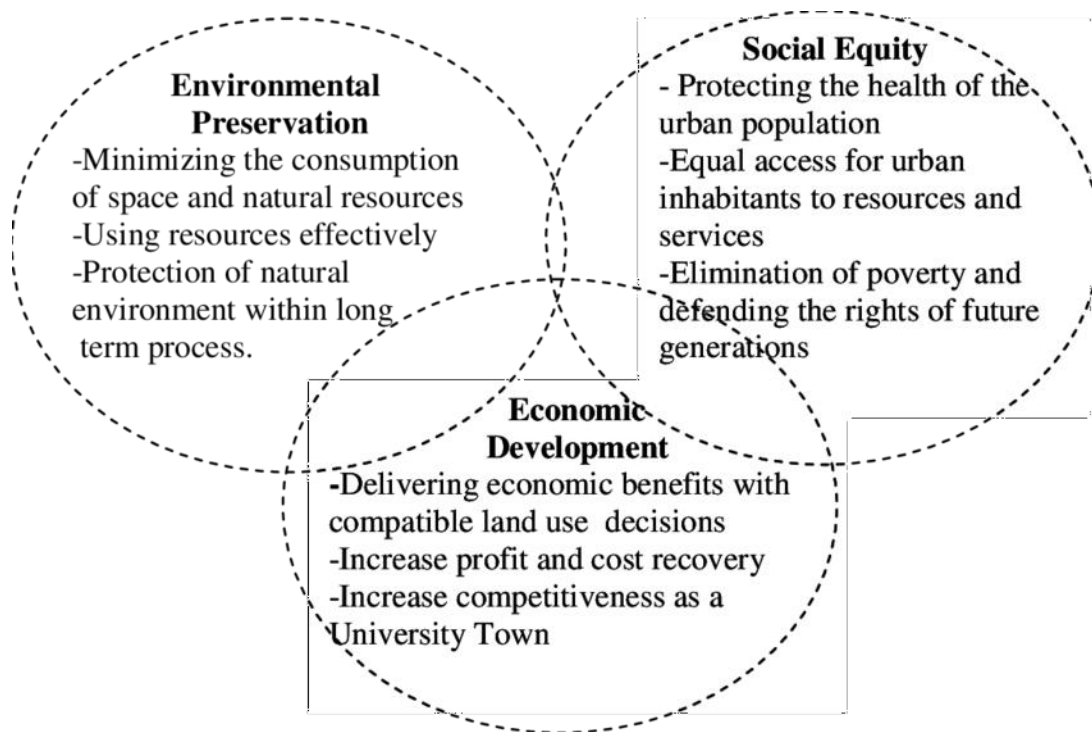

Figure 80: Proposed Sustainable, Environment, Social and Urban Growth Model

4.5.3.4 Sustainable environmental, social and economic urban growth Model

Sustainable environmental, social and economic urban growth advocates for “Improving the quality of life in a city, including ecological, cultural, political, institutional, social and economic components without leaving a burden on the future generations” The concept here is to avoid unsustainable trends in relation to climate change, energy usage, public health, poverty, social inclusion, demographic pressure, management of natural resources, biodiversity loss, land use and transport. In order to reach sustainable urban growth and development, environmental, social and economic dimensions should be integrated as a whole. A Sustainable district is one with dense population in mixed types of areas, and with a wide variety of social and commercial activities available within walking distance.

Figure 81: Sustainable, environmental, Social and economic urban growth model

A sustainable town generally promotes:

- better quality of life
- natural open spaces

- reduced waste
- equality, access, lower crime, sense of community,
- clean air and water quality
- Environmental diversity.

Key factors for sustainable development on urban level can be defined as;

- Reusing and regenerating derelict or disadvantaged areas.
- Avoiding urban sprawl by improving appropriate urban densities
- Implementing Brownfield site over Greenfield site development
- Ensuring mixed use of commercial, leisure, administrative and housing use in city centres
- Applying requirements for sustainable design and construction
- boosts the efficiency of land use, conserve valued un-built land, biodiversity and green areas from development and restores contaminated and derelict land

A Sustainable city is one with dense population in mixed types of areas, and with a wide variety of social and commercial activities available within walking distance.

4.5.3.5 Land Use Planning Policies and Proposals to Improve, Maintain or Protect the Environmental, Social and Economic Aspects of Development

Kabwe district's future as a vibrant town solely depends on its economic health and must be able to cater to a variety of people of different income levels. The district has a number of social amenities such as schools, health facilities, places of worship, retail shops and other convenient services. These amenities are the key drivers to economic growth as they provide the people with safety, convenience and aesthetics. However, a number of challenges have been faced in trying to develop the district, mainly because of the high levels of poverty, increased unemployment and under employment levels, growing inequalities and low levels of education. High levels of unemployment and poverty levels, pressure has put pressure on the scarce natural resources for the people's livelihood and sustenance. Practices such as charcoal production have been noted as the main drivers of deforestation and forest degradation in the district. Furthermore, most of the traditional methods that are used have contributed to the emissions of carbon and this has led to change in climate change. The demand for bricks has been fast growing due to the increase in population and the demand for housing especially in the urban parts of the district. The transformation that has occurred on land used for molding of bricks has left adverse effects such as contamination of the soil, health hazards leave no suitable arable land for agriculture.

The local authority needs to ensure that there is a balanced economic development in relation to protecting the environment. The following are some of the strategies that the local authority

will apply;

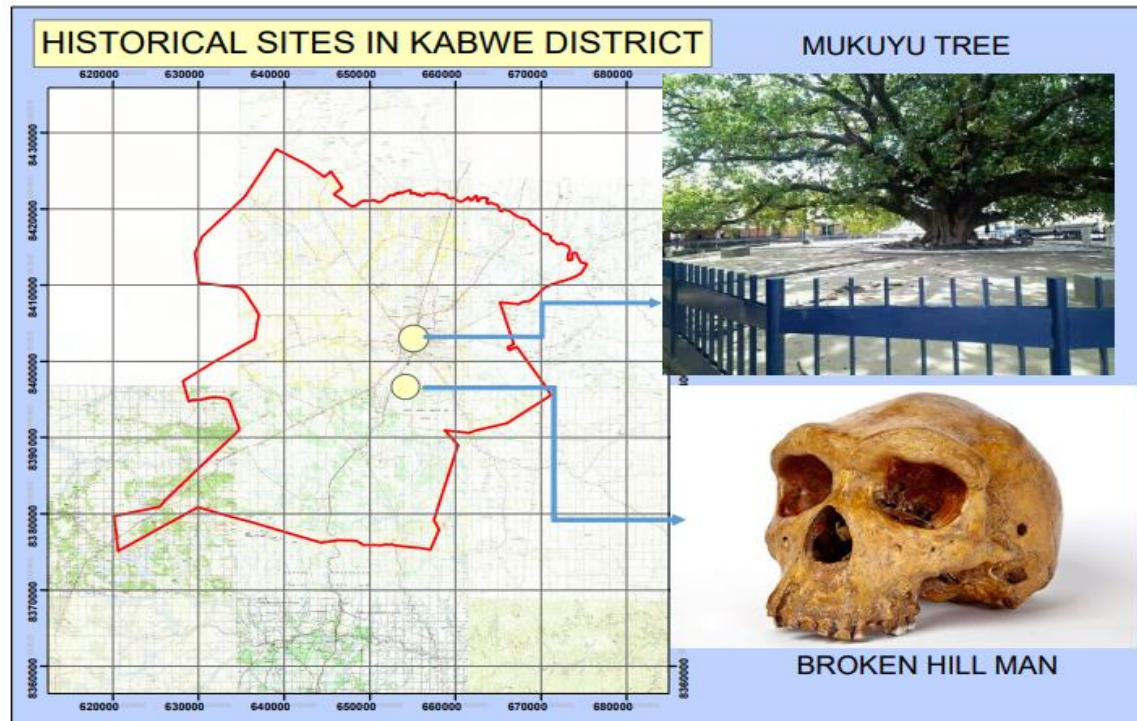

- i. The local authority shall ensure sound livelihoods of the local communities through skills training
- ii. The local authority through the department of forestry will ensure that they increase forest cover and reduce deforestation and this can only be effectively achieved if alternative livelihoods of people are identified and are linked to actions that can practically manage and improve the resource.
- iii. The local authority to ensure the restoration of deforested areas through activities that promote tree planting.
- iv. The local authority and department of forestry shall conduct sensitization programs on the importance of forests and how to conserve them.

4.5.3.5.6 Land Use Planning Policies and Proposals for Specific Protection Zones, Areas of Environmental Sensitivity or Cultural and Historical Importance or Areas of Importance for Disaster Management Purposes

Kabwe district is endowed with cultural and historical sites notably the Broken Hill man Site where the Skull was discovered in 1921 in mine area, Mukasa Agrosolutons fish farm the Kasavasa paintings, Lukanga Swamps, the Mukuyu tree, Mulungushi

Below is a map that is showing some of the historical sites in Kabwe district.

Figure 82: Kabwe Historical l Sites

A policy that the local authority may apply is one that aims at ensuring that settlements patterns do not encroach on areas of historical and cultural value and the measures may include;

- i. The local authority to engage the agency responsible for these areas of special interest to carry out sensitisation programs within the district.
- ii. The local area plans should be zoned in such a way that the historical sites are identified as conservation areas and they should be prohibited from any other land uses such as agricultural, residential and commercial zones.
- iii. The local authority to promote properly, coordinated developments within the district to minimise conflicts and encroachments

4.5.3.5.7 Land Use Planning Policies and Proposals for The Protection of National and Regional Interests, Policies and Guide

The district is endowed with the Lukanga Swamps which is a permanently swampy area located 50Km west of Kabwe district. The area is endowed with wildlife though road access is very poor. It covers an area of about 2600 Km²(Ramsar, 2006), and supports the population directly or indirectly dependent through the provision of fish, agricultural produce, livestock grazing fuel wood and charcoal (ibid). It also forms an important part of cultural identities of

the Lenje, the main tribe inhabiting a large area in the east of the catchment. To the Lenje the Lukanga swamps are important as a rain shrine and as a venue for traditional ceremonies such as Kulamba Kubwalo; a thanksgiving ceremony held at the end of the harvest (Mapedza et al 2008). The area can be a significant tourist attraction with species of birds endemic only to the District. The swamp area is also suitable for the location of aqua-marine based recreation activities such as sport fishing and boat cruises. All these activities have an impact on the water quality and quantity

The following are the strategies that the local authority will apply

- i. The local authority will introduce educational programs on good environmental practices that will safeguard the resource
- ii. The local authority to ensure that no developments or encroachments take place within the 100 meters buffer zone on water resources within the district.
- iii. The local authority to promote effective community participation and stakeholder involvement in the management of water resources

Furthermore, the district has forest reserves covering a total surface area of 15, 334 ha. The protected forest reserves are Kabwe National Forest Reserve No. 31, Kalulu Local Forest No. 32, Chibanga Local Forest No.53 and part of Munyama National Forest No.62 shared with Chisamba district. The forests have a high density of indigenous trees and will act as a cushion preventing further settlement growth towards Chibombo District area and Kapiri Mposhi District on the other side.

The following are the strategies that the Local authority will apply in order to conserve the forests

- i. The local authority shall raise public awareness and environmental education that will promote wise use of land meant for forests and the importance of the forests to the district's economy
- ii. The local authority to identify areas that will be zoned as protected areas to avoid further encroachments

The Mulungushi Dam which is located south-east of Kabwe also has a historical background, it was a man-made lake that was created on the Mulungushi River in 1925 by the Broken Hill Company and it was opened in 1925 by the Prince of Wales to provide hydroelectric power to the Broken Hill Mine then which is now Kabwe. The dam is 20km long and 2-3Km wide and it is home to the Mulungushi Boat club. The dam is remarkable for its attractive on-site activities such as bar, rock climbing, cliff, hiking and biking trails. The dam also offers Camping, Boating, Fishing, Swimming with an unobstructed

view over the dam. Other scenic beauties of the dam are the natural water fall, caves and incredible rock formation. One can also take a walk along the gates of the dam wall which looks spectacular. The dam has a unique historical heritage as it was commissioned by the Prince of Wales in 1925 and Mulungushi river area where the dam is sited was a training camp for Zimbabwe's Revolutionary Army. Mita Hills are located east of Kabwe district it is an embankment dam with a hydroelectric power station and man-made lake. Very few people know about the existence of the dam due to its poor road accessibility. The dam could be a prime hotspot for tourism attraction if exploited and marketed. The area has potential for onsite activities such as fishing, camping and hiking among other activities.

The following are the strategies that the local authority will apply

- i. The local authority will introduce educational programs on good environmental practices that will safeguard the resource
- ii. The local authority to ensure that no developments or encroachments take place within the 100 meters buffer zone on water resources within the district.
- iii. The local authority to promote effective community participation and stakeholder involvement in the management of water resources

3.5.8 Land Use Planning Policies and Proposals for Informal Settlements with A Description of Improvement Inputs or Other Management Responses Required and The Appropriate Building and Land Use Controls to Be Applied in Those Areas

Kabwe district's population over the past few years has undergone rapid urbanization and the major contributing factor has been the influx of people moving in from other neighboring towns and cities. Though informal settlements offer at least some degree of promise to the residents they lack basic infrastructure to support health and wellness this include clean water, adequate and durable housing and public spaces for commerce and recreation. Additionally, the districts informal settlements are overcrowded and are located in land conflict zones. This increase in population is slowly out spacing the district's ability to provide these basic social services to its residents. Kabwe has a total number of 14 informal settlements and this implies that the majority of housing in the district does not meet the building standards hence the overall quality of housing is poor and reflects the rural nature of the population.

Where informal settlements have already been established, it is most likely that the policy options may be challenging to be implemented by the Local Authority. The feasible options include

- i. Informal settlement upgrading-The local authority shall ensure that land that is under residential use is upgraded as in-situ informal settlement upgrading as it is believed to be the most cost-effective way to enable settlements to transform into dense and liveable places.
- ii. Low-cost infrastructure or housing improvements-the local authority shall ensure that housing units that are already established are improved rather than being reconstructed.
- iii. To strengthen partnerships in urban developments in order to improve on service delivery to the majority poor in the district.
- iv. The Local authority to promote participatory planning by involving the local residents in the upgrading of the settlements in the district
- v. The local authority to promote for partnerships with the public and private sector to provide serviced land
- vi. The local authority to engage traditional leaders when lobbying for land.

PART FOUR

IMPLEMENTATION PROGRAMME

5.0 Implementation Programme

This section is the implementation programme of the Kabwe District Integrated Development Plan. Firstly, it discusses the Capital Investment Programme which highlights the costs for the proposed programmes and activities to be implemented. Secondly, the Local authority financial plan for Kabwe Municipal Council is presented which gives details on the Revenue and Expenditure History for the last five years as well as the Revenue and Expenditure Forecasts for the next five years. Thirdly, the programme for the preparation of local area plans is discussed. Lastly the Monitoring and Evaluation Plan for the IDP is presented.

5.1 Capital Investment Programme

The capital investment plan provides a link between the planning area's strategic vision, its urban and rural land-use and its multi-year plan and budget. It describes the planning area's policies and financial abilities to manage the investment needs associated with its spatial development and built environment. Table 44: Shows the Capital Investment Program that speaks to the Economic Transformation and Job Creation thematic area of the Kabwe IDP;

Implementation Plan: Economic Transformation and Job Creation (8NDP Pillar 1)

Table 52:Economic Transformation and Job Creation (8NDP Pillar 1)

Strategies	Program	Activities	Location	Indicator	Input	Cost (ZMW)	Potential Source of funds	Responsible
Improve access to rural and urban areas. Relevant	Infrastructure development	Objective 1: To develop and maintain 250km of safe and sustainable road network and drainage system by 2027						
		Rehabilitation of 100Km damaged township roads and drainages	Entire district	Kilometres of township roads and draianges rehabilitated	Human Resource, Equipment, materials	800,000,000	KMC, NFRA	Kabwe Municipal Council and RDA
		Construction And maintenance of 150 km feeder roads and drainages	Entire district	Kilometres of feeder roads and draianges constructed and maintained	Human Resource, Equipment, materials	150,000,000	KMC, NFRA	Kabwe Municipal Council and RDA
		Construction And maintenance of 50 Km township roads and drainages	Entire district	Kilometres of township roads and draianges constructed and maintained	Human Resource, Equipment, materials	1,400,000,000	KMC, NFRA	Kabwe Municipal Council and RDA
		Gazetting/Street /naming of 120 undefined township/feeder roads	Entire district	number os streets amd undefined roads named	Human Resource, Equipment, materials, financial resources	300,000	KMC, NFRA	Kabwe Municipal Council
		Procurement of Road cinstruction equioment (grader, compactor, tipper, excavator)	Entire district	Number of graders procured	Human Resource, Equipment, materials financial resources	15,000,000	KMC, NFRA	Kabwe M. Council

		Objective 2: To construct 2 bridges by 2027						
		Construction of bridge	Munyama Kalima	Number of bridges constructed	Human Resource, Equipment, materials, financial resources	2,000,000	KMC, NFRA	Kabwe Municipal Council
		Objective 3: To construct 1 Airport and rehabilitate 1 airstrip by 2022						
Improve access to rural and urban areas. Relevant	Infrastructure development	Upgrading of Airstrip	Chililalila	Number of Airstrips upgraded	Human Resource, Equipment, materials, financial resources	5,000,000	KMC, NFRA	Kabwe Municipal/National Airport
		Construction of an Airport	Mpima	Number of Airstrips constructed				National Airport
		Objective 4: To protect 50km of railway infrastructure from encroachments and rehabilitate 140 km rail line stretch by 2027						
		Repossession of 50KM encroached Rail land	Along the strip rail Reserves	Extent of encroached rail land repossessed	Human Resource, materials, financial resources	50,000	Zambia Railways	Kabwe Municipal/ ZRL
		Rehabilitation of the rail Line of 140 km	Entire district	Kilometres of rail line rehabilitated	Human Resource, materials, financial resources		Zambia Railways	Kabwe Municipal/ ZRL
Facilitate for Business Development among co-operatives and promotion and registration of co-operatives in different Sectors	Cooperatives promotion and Development	Objective 5: To reduce poverty at Household level from 60% to 44.7% by 20227						
		Conduct sensitization meetings on the formation of cooperatives in the identified priority sectors	All wards sectors	Number of meetings	Man power, stationery, materials, fuel	355,000	Ministry of small and medium enterprise development	MSMED- Department of Cooperatives, Local Authority

Establishment of bus stations for both local and long-distance travel		Formation and Registration of Co-operatives in different sectors	Across the district	Number of cooperative	Man power, stationery, materials, fuel	50,000	Ministry of small and medium enterprise development	MSMED/KCM
		Conduct the training of selected cooperatives in viable value chains for their development	Across the district	Number of cooperatives	Man power, stationery, materials, fuel	150,000	Ministry of small and medium enterprise development	MSMED-Department of Cooperatives, Local Authority
	Construction and maintenance of Bus stations	Conduct training on how to develop business plans focusing on utilizing local opportunities at district level.	Across the district	Number of business plans	Man power, stationery, materials, fuel	150,000	Ministry of small and medium enterprise development	MSMED-Department of Cooperatives, Local Authority
		Conduct sensitization meetings focusig on the provision of linkages in business development Support services	Across the district	Number of business linkages	Man power, stationery, materials, fuel	150,000	Ministry of small and medium enterprise development	MSMED-Department of Cooperatives, Local Authority
		Objective 6: To compete 1 bus station and rehabilitate 2 ablution blocks on existing bus stations by 2027						
		Completion of the Lukanga bus station	Lukanga Ward	Number of bus stations completed	Man power, building materials, fuel		KMC, MoLGRD	KMC, MLGRD
		Rehabilitation of toilets in existing bus stations	Green Market Station	Number of toilets rehabilitated	Man power, building materials, fuel	150,000	KMC, MoLGRD	KMC, MLGRD

	Constructio n and maintenanc e of markets	Objective 7: To develop and maintain 13 markets by 2027						
		Rehabilitation of toilets at Market	Chimanimani, Nakoli, Njanji, Katondo	Number of toilets rehabilitated	Man power, building materials, fuel	500,000	KMC, MoLGRD	KMC, MLGRD
Constructionn of modern markets and maintenanc e of existing ones.		Provision of market stalls to traders	Bwacha Markert	Number of market stalls provided	Man power, building materials, fuel	200,000	KMC	KMC, MLGRD
		Improvement of market shelters in existing markets	Bwacha, Nakoli, Waya, Kalonga (Pollen, Kamushanga market)	Number of market shelters improved	Man power, building materials, fuel	600,000	KMC	KMC, MLGRD
		Drilling of boreholes in markets	Bwacha and Kabwe Central	Number of boreholes drilled(wate r scheme)	Man power, building materials, financial resources	1,000,000	KMC	KMC, MLGRD
	Construction and maintenance of markets	Construction of 13 modern market shelters in the district (Zambezi, Ngungu, Kawama (Zambani area), Chililalila, Muwowo West (Chikupwi zone), Muwowo East (No man's land between ZCS and K Mulonga small holding), Justin Kabwe , Katondo, Lukanga, Munga, Mpima, Kalonga (Makwati and Kakumbi), Highridge)	All Wards	number of market shelters constructed	Man power, building materials, financial resources	1,500,000	KMC	KMC, MLGRD

Agriculture production and productivity	Infrastructure Development	Objective 8: To Improve agriculture production and productivity by 2027						
Increase Hectarage under irrigation	Promotion of Post-harvest handling facilities	Construction of one Farmer training center	Mutwewansofu	Number of FTCs	Man power, machinery, building materials, fuel	3,000,000	Ministry of Agriculture, Donor	MoA
		Construction of 29 agriculture camp houses	Across the District	Number of camp houses	Man power, machinery, building materials, fuel	11,194,000	Ministry of Agriculture, Donor, CDF	MoA
		Construction of 4 Agriculture block offices	Munyama, Mpima, Waya and Munga	Number of block houses	Man power, machinery, building materials	696,000	Ministry of Agriculture, Donor, CDF	MoA
		Construction of 19 Storage Shed facilities.	All camps	Number of storage	Man power, machinery, building materials		Ministry of Agriculture, Donor, CDF	MoA
	Irrigation farming promotion	Conduct Farmer sensitisation meetings	Across the District	Number of farmers	Man power, Stationary, trainiing aid & food stuff, fuel	150,000	Ministry of Agriculture	MoA
Increase Hectarage under irrigation	Irrigation farming promotion	Conduct Farmer training	Across the District	Number of farmers	Man power, Stationary, fuel, trainiing aid & food stuff	150,000	Ministry of Agriculture	MoA
		Construction of a dam	Munyama Block	Number of dams	Man power, machinery, building materials, fuel	10,800,000	Ministry of Agriculture, Donor or	MoA
Improvement of Agriculture extension services delivery	Extension Service Support	Recruitment of 10 camp officers	Across the district	Number of officers	Stationery, fuel, man power	150,000	Ministry of Agriculture	MoA
		Procurement of 29 Motorbikes	Across the district	Number of motorbikes	Stationery, fuel, man power	3,480,000	Ministry of Agriculture	MoA
		Procurement of Vehicles	Farmer Training center and DACO's office	Number of vehicles	Stationery, fuel, man power	3 000 000	Ministry of Agriculture	MoA

Promote value addition	Value chain development	Training farmers in value addition in various crops	Across the district	No of farmefrs trained	Stationery, fuel, man power	180,000	Ministry of Agriculture	MoA
Facilitation of Increased access to agriculture finances	Agribusiness development	Training of SMES in agribusiness	Across the district	Number of SMES	Stationery, fuel, man power	180,000	Ministry of Agriculture	MoA
		Linking SMES to financial institutions	Across the district	Number of linkages	Stationery, fuel, man power	800,000	Ministry of Agriculture	MoA
Improvement of Farmer input support management system	Farmer input support	Support farmer beneficiaries with farming inputs (FISP)	Across the district	Number of beneficiaries	Stationery, fuel, man power	200,000	Ministry of Agriculture	MoA
Promotion of Agricultural Mechanization	Agricultural Mechanization	Conducting sensitization and training in agricultural mechanization	Across the district	Number of sensitization and trainings	Stationery, fuel, man power	200,000	Ministry of Agriculture	MoA
Establishment of solar plants	Agricultural Mechanization	Establishment of solar plants	Makululu ,mpima,Luansans e, Muwowo East/West Kawama, Shakumbila ,Makombe, Prospect	Number of solar plants	Man power, machinery, building materials, fuel		PPP and business to business joint ventures.	KMC, MoA,
		Identification and titling of land for 9 Solar Power Plants		0	9		2	2
Wind energy	Alternative Energy	Establishment of 2 windmill power plants	Central and Bwacha	Number of windmills	Man power, machinery, building materials, fuel		PPP and business to business joint ventures.	KMC, MoA
Promote value addition	Objective 9: To increase on number of crops on value chain addition from 2 to 4 crops by 2027							
	Value chain development	Training farmers in value addition in various crops	Across the district	Number of farmers	Stationery, fuel, man power	180 000	Ministry of Agriculture	MoA
Construction and Rehabilitation of Cultural Tourism and	Infrastructure Development	Objective 10: To Promote Tourism Growth by 2027						
		Rehabilitation of theatre houses	Kabwe Industrial Area	Number of theatre houses	Man power, machinery, building materials	500,000	Ministry of Tourism and Art, Partners.	Ministry of Tourism and Art

museum infrastructure		Identification, rehabilitation and construction of crafts centers	Across the district	Number of crafts centers	Man power, machinery, building materials	10,800,000	Ministry of Tourism and Art, Partners.	Ministry of Tourism and Art
Development of Tourism Cultural Products	Tourism development	Identify and develop Home stay cultural tourism spaces	Across the district	Number of home stay cultural tourism spaces	Man power, stationery, art materials, fuel.	500,000	Ministry of Tourism and Art, Partners.	Ministry of Tourism and Art
		Identify and mentor Traditional crafts practitioners	Across the district	Number of traditional crafts practitioners	Man power, stationery, art materials, fuel.	130,000	Ministry of Tourism and Art, Partners.	Ministry of Tourism and Art
		Taking inventory of 2003 ICH convention and sensitization	Across the district	Number of inventories	Man power, stationery, art materials, fuel.	50,000	Ministry of Tourism and Art, Partners.	Ministry of Tourism and Art
Development of Tourism Cultural Products	Tourism development	Identify, train and mentor Traditional crafts practitioners in value addition and production of quality crafts and establish markets linkages	Across the district	Number of traditional crafts practitioners	Man power, stationery, art materials, fuel.	130,000	Ministry of Tourism and Art, Partners.	
		Conduct Cultural Exhibitions and Tours at Heritage sites	Across the district	Number of cultural exhibitions and tours	Man power, stationery, art materials, fuel.	380,000	Ministry of Tourism and Art, Partners.	Ministry of Tourism and Art
		Hold Cultural Carnival Festival / Roadshows	Across the district	Number of Cultural Carnival Festival / Roadshows	Man power, stationery, art materials, fuel.	850,000	Ministry of Tourism and Art, Partners.	Ministry of Tourism and Art

		Link Cultural dance & bands groups with the hospitality industries, mines, security wings and others	Across the district	Number of Cultural dance & bands groups linked	Man power, stationery, art materials, fuel.	80,000	Ministry of Tourism and Art, Partners.	Ministry of Tourism and Art
Identification and registration of Creative Industries enterprises and Artists	Enterprise Development Initiative	Identification and registration of Artists	Across the district	Number of Artists registered	Man power, stationery, art materials, fuel.	30,000	Ministry of Tourism and Art, Partners.	Ministry of Tourism and Art
		Develop Creative Industries enterprises Value chain and Market linkages	Across the district	Number of value chain & market linkages created	Man power, stationery, art materials, fuel.	680,000	Ministry of Tourism and Art, Partners.	Ministry of Tourism and Art
		Identified and register arts with PACRA, ZAMCOPs, Local Authority, Ministry of Commerce	Across the district	Number of arts registered	Man power, stationery, art materials, fuel.	50,000	Ministry of Tourism and Art, Partners.	Ministry of Tourism and Art
	Talent and Entrepreneurship Skills Development and mentorship programs	Training and mentoring Artists in Talent and Business skills	Across the district	Number of Artists trained and mentored	Man power, stationery, art materials, fuel.	120,000	Ministry of Tourism and Art, Partners.	Ministry of Tourism and Art
		Develop and hold Artists Shows and Exhibitions	Across the district	Number of shows and exhibitions held	Man power, stationery, art materials, fuel.	380,000	Ministry of Tourism and Art, Partners.	Ministry of Tourism and Art
		Undertake Artists Visitors, visitations and Inspection Tours	Across the district	Number of visits done	Man power, stationery, art materials, fuel.	200,000	Ministry of Tourism and Art, Partners.	Ministry of Tourism and Art

Identification and registration of Creative Industries enterprises and Artists	Talent and Entrepreneurship Skills Development and mentorship programs	Identify Expressive Arts Teachers and Art Experts in formal employment	Across the district	Number of Expressive Arts Teachers and Art Experts in formal employment identified	Man power, stationery, art materials, fuel.	25,000	Ministry of Tourism and Art, Partners.	Ministry of Tourism and Art
		Identify Artists enterprises as fully surviving on art	Across the district	Artists Number of enterprises fully surviving on art identified	Man power, stationery, art materials, fuel.	25,000	Ministry of Tourism and Art, Partners.	Ministry of Tourism and Art
		Establish Creative Industries enterprises value chains and market linkages	Across the district	Number of Creative Industries enterprises value chains and market linkages	Man power, stationery, art materials, fuel.	250,000	Ministry of Tourism and Art, Partners.	Ministry of Tourism and Art
		Identify Film and Drama practitioners identified and hold Talent shows	Across the district	Number of Film and Drama practitioners identified and hold Talent shows	Man power, stationery, art materials, fuel.	80,000	Ministry of Tourism and Art, Partners.	Ministry of Tourism and Art
		Identify Music and Dance practitioners and hold Talent shows	Across the district	Number of Music and Dance practitioners and hold Talent shows	Man power, stationery, art materials, fuel.	80,000	Ministry of Tourism and Art, Partners.	Ministry of Tourism and Art
		Identify Poetry and Comedy practitioners and shows	Across the district	Number of Poetry and Comedy practitioners and shows	Man power, stationery, art materials, fuel.	80,000	Ministry of Tourism and Art, Partners.	Ministry of Tourism and Art
		Undertake field visits to Art galleries, Play and theatre houses, exhibitions centers and studios for	Across the district	Number of field visits taken	Man power, stationery, art materials, fuel.	25,000	Ministry of Tourism and Art, Partners.	Ministry of Tourism and Art

		enhancement of quality products						
	Creative Industries Infrastructure development	Establish/rehabilitate /develop Arts Business centers spaces	Across the district	Number of arts business center spaces	Man power, stationery, art materials, fuel.	25,000	Ministry of Tourism and Art, Partners.	Ministry of Tourism and Art
Objective 11: To Improve Livestock production and productivity by 2027								
Rehabilitation and construction of Livestock infrastructure	Infrastructure development	Rehabilitation of Dip Tanks and Spray Race	Munga West, Munga North, Munyama, kafulamase, Mpima	Number of Dip tanks and spray race rehabilitated	Various construction materials and Labor	400,000	MFL, Donors, KMC	MFL
		Construction of Dip Tanks	Chinyanja Muwowo East, Muwowo West, Luansanse	Number of Dip tanks Constructed in the areas	Various construction materials and Labour	1,400,000	MFL, Donors, KMC	MFL
		Construct of Livestock Camp houses	Across the district	Number of camp Houses constructed in the District	Various construction materials and Labor	1,890,000	MFL, Donors, KMC	MFL
		Rehabilitate a veterinary Clinic	District Office	A completed Vet Clinic	Building Materials, Clinic and Equipment Labor	200,000	MFL, Donors, KMC	MFL
		Rehabilitation of Abattoir	Industrial area	A rehabilitated Abattoir in Industrial area	Various materials and Labor	58,000	MFL, Donors, KMC	MFL
		Construction of 5 cold storage facilities	Entire District	Number of cold storage constructed	Various building materials and labor	320,000	MFL, Donors, KMC	MFL

		Construct 10 kennels	District office and in all Vet Camps	Number of Kennels constructed	Various building materials and labor	50,000	MFL, Donors, KMC	MFL
		Construction of breeding & livestock centers	Entire District	Breeding and Livestock Centre constructed	Various building materials and labour	900,000	MFL, Donors, KMC	MFL
Construction of Aquaculture infrastructure	Infrastructure development	Objective 12: To improve aquaculture production and productivity from 15.7 to 20 Metric Tonnes by 2027						
		Construct Fish ponds	Luansanse (Kafulamase area), Muwowo East (Chitakata and Tuteni)	Number of fish ponds constructed in the areas	Various materials, Fuel and Lubricants and human Resource	500,000	MFL, Donors, KMC	MFL
		sensitization and training of farmers in fish farming	All wards	attendance registers, number of meetings held	stationary, food and refreshments, human resources , fuel and lubricants	90,000	MFL, Cooperating partners	MFL
Fisheries and aquaculture development	Fish farming promotion	Enhance fish production (Metric tons)	Across the district	metric tonnes of fish produced	technical support, fuel and lubricants and Human resource	30,000	MFL, Cooperating partners	MFL
Improve livestock and vet extension service delivery	Extension Service Support	Purchase of motor vehicle for district office	District office	A motor vehicle procured	procurement documents	1 500 000	MFL, Donors, KMC	MFL
	Transport-Support to Extension services	Purchase of 7 motor bikes for extension staff	In all the 6 camps of the district	Number of Motor bikes purchased for the 6 camps and District Office	procurement documents	840,000	MFL, Donors, KMC	MFL

		Objective 13: To promote local and diaspora participation in the economy in order to create wealth and employment by 2027						
Promote Enterprise Development	Business Development Services Provision.	Hold Expo 2025 Preparatory meeting with the private sector	Entire District	Number of prep meeting held	Human Resource, stationary, financial resources	15,000	Kabwe municipal Council/KCCI	Kabwe municipal Council/KCCI
		Hold engagement meetings with the business community aimed at promoting PPP and business joint ventures.	KMC	Number of prep meeting held to promote PP	Human Resource, stationary, financial resources	20,000	Kabwe municipal Council/KCCI	KMC/KCC/Cooperating partners
Promote Enterprise Development	Promote Enterprise Development	Hold Kabwe expo event aimed at promoting PPP	Entire District	Number of Expos held	Human Resource, stationary, fuel financial resources	300,000	Kabwe municipal Council/KCCI/GRZ	Kabwe municipal Council/KCCI/PPU
		Hold engagement meetings with the stakeholders from the private stakeholders aimed at creating a robust value chain system	Entire District	Number of engagement meetings held	Human Resource, stationary, fuel financial resources	20,000	Kabwe municipal Council/KCCI/GRZ	Chamber of Commerce, GRZ

		Hold engagement meetings with the Local Authority aimed at restructuring business licensing fees and normalization of informal businesses.	Entire District	Number of engagement meetings held	Human Resource, stationary, financial resources	20,000	Kabwe municipal Council/KCCI/GR Z	Kabwe municipal Council/CEEC
		conduct a verification exercise of informal businesses in the district	Entire District	Number of verification exercises conducted	Human Resource, stationary, fuel financial resources	15,000	Kabwe municipal Council/KCCI/GR Z	Kabwe municipal Council
		Conduct engagement meetings with informal business owners on the need to formalize their business	Entire District	Number of engagement meetings conducted	Human Resource, stationary, fuel financial resources	20,000	Kabwe municipal Council/KCCI/GR Z	Chamber of Commerce, GRZ
Opening up legal selling game meat outlets	Engagement with Game Ranch owners /Identification of selling points	Objective 14: To reduce illegal trade in wildlife products by 2027						
		Meetings with game ranch owners (Town Centre, Luangwa Township, Makululu, Mukobeko, Highridge, Katondo, Bwacha, Chimanamani, Chidwin Barracks, Zambia Railways Compound)	10 areas	Number of meetings	Fuel, stationery, refreshments	40,000	DNPW, KMC, GAME RANCH OWNERS	DNPW

Sensitization	Game Ranch	Community Sensitization/ meetings with the KMC	All wards	Number of sensitizations	Fuel, stationery, refreshments	40,000	DNPW, KMC	DNPW
Sensitization patrols in game reserves	Provide wildlife protection	Objective 15: To improve on law enforcement manpower						
		Procure one {1} motor vehicle	Entire district	Number of motor vehicle procured	procurement documents, fuels	1,500,000	DNPW, cooperating partners	DNPW
Enhance presence of wildlife officers in strategic game reserve areas	Infrastructure development	Objective 16: To provide accommodation for Wildlife Police Officers						
		Constructions of 5 houses for wild police officers	Entire Kabwe District	Number of houses constructed	Various building materials and labour	1,930,000	DNPW, cooperating partners	DNPW,
Information dissemination	Conservation education on the importance of wildlife and sensitization on hunting processes	Objective 17: To sensitize the members of the community on wildlife conservation						
		Radio programs talk and music shows wildlife magazine distribution	Entire Kabwe District	Number of magazines distributed, Number of radio programs hosted	radio stations, stationery, artists	100,000	DNPW, cooperating partners	DNPW,
Offering grants	Empowerment	Objective 18: To empower 1,020 youths, women, and disabled (Cooperatives, Clubs, Associations, and Organized Groups) by 2027						
		Offering of 1,020 grants to Organized Groups, clubs and cooperatives	All wards	Number of organized groups, clubs awarded grants	Human resource, financial resources, stationary	2,264,000	KMC, GRZ	GRZ, KMC

Awarding of loans	Empower ment	Offering of 1020 loans to clubs, organized groups and cooperatives	All wards	Number of organized groups, clubs awarded grants	Human resource, financial resources, stationary	3,360,000	KMC, G RZ	GRZ, KMC
----------------------	-----------------	---	-----------	---	---	-----------	------------------	----------

Skills development	Empowerment	Objective 19: To empower 2,016 youths with skills development under TEVETA by 2027						
		Training of 2,016 youth by TEVETA approved Schools	All wards	Number of youths trained by TEVET approved schools	Human resource, financial resources, stationary	5,660,000	KMC, GRZ	GRZ, KMC

Table 53: Implementation Plan: Human and Social Development (8NDP Pillar 2)

Implementation Plan - : Human and Social Development (8NDP Pillar 2)								
Strategy	Program	Activities	Location	Indicator	Input	Cost (ZMW)	Potential Source funds	Resp. Agency/Dept
Objectives	Enhance Access to Quality, Equitable and Inclusive Education by 2027							
Improve on staffing levels	Teacher Deployment	Deployment of 1490 teachers in the district.	Across the district	No. of teachers deployed in the district	Human Resource	350,000	GRZ, Cooperating partners	MOE
Promote Adult Literacy Program	Adult Education/Adult Literacy	Opening of 25 Adult literacy Education Centers	Munyama and Chinyanja	No. of adult Literacy Education Centers opened	Human Resource	25,000	GRZ, Cooperating partners	MOE
Promote Early Childhood Education	Early Childhood centers	Establishment of 16 more Early childhood centers in 16 primary schools	Justine Kabwe, Waya, Chililalila, Nakoli, Bwacha, Kawama, Bwacha, Chimani, Kalonga, Kasitu, Muwowo, East, Luangwa	No. of early childhood centers established in primary schools	Human Resource	25,000	GRZ, Cooperating partners	MOE
Promote Inclusive Learning and education	Special Education Centres	Establishment of 8 more special education centres	Mine, Grace Christian primary school, Kawama primary school, Munga primary school, Nakoli primary school	No. of special education centers established	Human Resource	10,000	GRZ, Cooperating partners	MOE
ICT Promotion	IT equipment	Procurement of 300 computers in schools	Across the district	No. of computers procured in schools	Human Resource	4,860,000	GRZ, Cooperating partners	MOE

Construction of staff houses	Infrastructure Development	To construct 900 staff houses in the district by 2027	Across the district	No. of staff houses constructed in the district by 2027	Man power, machinery, building materials, Human Resource	4,544,700	GRZ, Cooperating partners	MOE
		Rehabilitation of DEBS office premises	DEBS Office	No. of offices rehabilitated at District education board office	Man power, machinery, building materials	450,700	GRZ, Cooperating partners	MOE
Rehabilitation of all dilapidated infrastructure	Infrastructure Development	Rehabilitation of 100 existing schools at all levels of education in the district	Across the district	No. of schools rehabilitated in the district	Man power, machinery, building materials	32,000,000	GRZ, Cooperating partners	
		Construction of 4 boarding secondary schools in the district	1 at Kafulamase 1 at Munga 1 at Kang'omba and 1 at nyenyezi	No. of boarding 'Secondary schools constructed	Man power, machinery, building materials	64,000,000	GRZ, Cooperating partners	MOE
Constructi on of new schools		Construction of 2 primary schools	Kasavasa - waya	No. of primary schools constructed	Man power, machinery, building materials	3,600,000	GRZ, Cooperating partners	MOE

	Construction of Kawama Primary school	Kawama	No. of permanent school structure constructed at Kawama	Man power, machinery, building materials	3,000,000	GRZ, Cooperating partners	MOE
Construction of an independent school structure	Construction of an independent day secondary school at Kasanda Malombe primary school	Kasanda Malombe	No. of Secondary schools constructed at Kasanda Malombe	Man power, machinery, building materials	8,000,000	GRZ, Cooperating partners	MOE
Enhance access to safe Water and sanitation supply in schools	Construction of ablution blocks in schools.	All Wards	No. of ablution blocks constructed	Man power, machinery, building materials	8,000,000	GRZ, Cooperating partners	MOE
	Drilling of boreholes and establishing Piped Water schemes		No. of boreholes drilled and piped water schemes established	Man power, machinery, building materials	300,000	GRZ, Cooperating partners	MOE
Construction of school Hall	Construction of school halls in 2 Secondary schools	Danford Chirwa and Raphael Kombe	No. of school halls constructed	Man power, machinery, building materials	26,000,000	GRZ, Cooperating partners	MOE

Constructi on of classroom blocks		Construction of 6X3 classroom blocks in 3 primary schools	Nakoli, bwafwano, Nkruma Ext	No. of classroom blocks constructed	Man power, machine ry, building material s	9,000,000	GRZ, Cooperating partners	MOE
Procureme nt of desks	Infrastructure Development	Procure 65000 desks in all schools	All schools in the district	No. of desks procured	Human Resourc e	104,000,0 00	GRZ, Cooperating partners	MOE
Constructi on of lab facilities in schools		Construction of 3 laboratories in the 22 respective Schools in the district.	All District	No. of laboratories constructed in schools.	Man power, machine ry, building material s	16,500,00 0	GRZ, Cooperating partners	MOE
Objective s	Improve sanitation coverage from 70% to 90% by 2027, Increase solid waste collection and disposal from 40% to 70% by 2027 Recycle 25% of all solid waste collected by 2027							
Maintenan ce and rehabilitati on of sanitation infrastruct ure	Infrastructure development	Maintenance/ rehabilitation of sanitation facilities at the following markets:	Pollen (1), Njanji (1), Kachulu (1), Kamushanga (1), Mukobeko (1), Kasanda (1), Mine (1), Green Market (1)	No. of sanitation facilities maintained and rehabilitated at the markets	Man power, machine ry, building material s	1,500,000	GRZ, Cooperating partners	Local Authority, GRZ
Maintenan ce of sanitation infrastruct ure	Infrastructure development	Maintenance of sanitation facility at Kabwe Intra bus station	CBD	No. of sanitation facilities maintained and rehabilitated at intra bus station	Man power, machine ry, building material s	200,000	GRZ, Cooperating partners	Local Authority

Community Sanitation and Hygiene promotion	Sanitation and hygiene promotion	Intensify sensitization and demonstrations in sanitation and hygiene promotion	All the 29 Wards	No. of sensitizations and demonstrations conducted	Man power, machinery, building materials	80,000	GRZ, Cooperating partners	KMC, GRZ
Emptying of On-Site Sanitation Facilities	Fecal Sludge Management	Sensitization and Orientation Training of Emptyers	All the 29 Wards	No. of sensitization and orientation trainings of emptier conducted	Man power, machinery, building materials	56,000	GRZ, Cooperating partners	KMC, GRZ
		Procurement of EVAC, Tools; PPE's and Chemicals	All the 29 Wards	No. of EVAC, Tools, PPEs and Chemicals procured	Man power, machinery, building materials	65,000	GRZ, Cooperating partners	KMC, GRZ
		Procurement of Vacuum tanker	All the 29 Wards	No. of Vacuum tankers procured	Man power, machinery, building materials	45,000	GRZ, Cooperating partners	KMC, GRZ
Enhancement of solid waste management coverage	Solid Waste Management	Procure skip bins	CBD	No. of skip bins procured	Human Resource	490,000	GRZ, Cooperating partners	KMC, GRZ

Enhancement of solid waste management coverage	Solid Waste Management	Procure a Compactor truck	CBD	No. of compactor trucks procured	Human Resource	128,000	GRZ, Cooperating partners	KMC, GRZ
		Procure 2 tipper trucks	CBD	No. of trucks procured	Human Resource	1,050,000	GRZ, Cooperating partners	KMC, GRZ
		Procure a Tractor Load Backhoe	CBD	No' of tractor procured	Human Resource	500,000	GRZ, CO	KMC, GRZ
		Procure a Front End Loader	CBD	No. of front end loader	Human Resource	160,000	GRZ, Cooperating partners	KMC, GRZ
		Procure a Bulldozer	CBD	No. of Bulldozers procured	Human Resource	280,000	GRZ, Cooperating partners	
Enhancement of solid waste management coverage	Infrastructure Development	Construction, operation and maintenance of an engineered landfill through Public Private Partnership (Build, Finance, Operate, Transfer Model)	Mpima	No. of engineered landfills constructed operationalized and maintained through Public Private Partnership (Build, Finance, Operate, Transfer model)	Human Resource	68,833,046	GRZ, Cooperating partners	Local Authority, PPP

Enhancement of solid waste management coverage	Solid Waste Collection	Engagement meetings with franchise companies and Community Based Enterprises in the six solid waste management zones	Six zones	No. of franchise companies and community based enterprises in the six solid waste management zones engaged	Human Resource	580,000	GRZ, Cooperating partners	Local Authority, PPP
Enhancement of solid waste management coverage	Recycling of solid waste	Engage 2 recycling companies and 2 material resource recovery companies with facilities	Local/ International	No. of recycling material resource recovery companies with facilities engaged	Human Resource	500,000	GRZ, Cooperating partners	Local Authority
	Community awareness on solid waste management practices	Engage media houses and other stakeholders through radio shows in awareness creation	All wards	No. of media houses and other stakeholders engaged through radio shows in awareness creation	Human Resource	380,000	GRZ, Cooperating partners	Local Authority
Enhancement of solid waste management		Conducting District anti-litter awareness campaign.	All wards	No. of district anti-litter awareness campaign conducted	Human Resource	50,000	GRZ, Cooperating partners	

nt coverage		Incentivizing the Keep Kabwe Clean Green & Healthy Campaign (KKCGHC)	All wards	No. of Keep Kabwe clean, green and Healthy Campaigns incentivized	Human Resource	50,000	GRZ, Cooperating partners	
		Conducting meetings on Solid Waste Management (Ward Development Committees, Markets, Schools, Business Associations, etc.)	All wards	No. of meetings on Solid waste Management (Ward Development Committees market, Schools, Business Associations) conducted.	Human Resource	100,000	GRZ, Cooperating partners	
		Engage street vendors on the best solid waste management practices	Freedom and Independence Way (CBD)	No. of street vendors on the best solid waste management practices engaged.	Human Resource	20,000	GRZ, Cooperating partners	Local Authority

Objectives	To attain at least 80% of clean and safe urban water supply within 5 years							
The LA in collaboration with LWSC Improve access to clean and safe water supply	Infrastructure development and maintenance	Prepare maps for the peri urban areas to depict households without water points	Katondo, Waya, Makululu, Makandanyama, Kafulamase, LA	Number of maps prepared	Man power, machinery, building materials	10,000	LA	LA
		Drill, test and equip new boreholes (Water scheme)	All wards	Number of boreholes drilled (water schemes)	Man power, machinery, building materials	1,040,000	KMC, GRZ	LA
		Rehabilitation of 52 boreholes	All wards	Number of boreholes rehabilitated	Man power, machinery, building materials	150,000	LgWSC	LgWSC
		Installation of water kiosks	Munyama, Munga, Chinyanja, Muwowo East, Muwowo West, Justin Kabwe, Nakoli, Waya, Kalonga (Kamushanga, Kakumbi and Makwati, Luansanse Kulamase, Chirwa, Njanji, Mpima	Number of water kiosks installed	Man power, machinery, building materials	2,160,000.00	Water Affairs	Water Affairs
Objective	To provide quality adequate transport facilities (i.e. ambulances and utility vehicles) for smooth health service delivery							

S								
Increase access to quality health care	Equipment and transport procurement and maintenance	Procure 4 basic standard ambulances	Kabwe district hub/zones	Number of ambulances procured	Human Resource	21,600,000	CDF	MOH/COOPERATING PARTNERS/CDF
		Procurement of 35 motorbikes	Kabwe district health office/health facilities	Number of motor bikes procured	Human Resource	4,200,000	CDF	
		Procurement of 2 Toyota Land Cruiser utility vehicles and 1 containerized truck	Kabwe District Health Office	Number of utility vehicles procured	Human Resource	3,600,000	CDF	
Objective s:	To train health personnel in sign language interpretation from 0 to 84 by the end of 2027							
Strengthen public health	Health education promotion	Training of health personnel in sign language and alternative communication methods	All 42 Health Facilities	Number of health personnel trained	Human Resource, IEC materials, financial resource	75,000.00	MoH	MOH
Objective s:	To increase on the number of facilities with IEC material printed in braille from 0 to 42 by the end of 2027							
Strengthen public health	Health education promotion	Printing of IEC material in braille	All 42 health facilities	Number of Health Facilities with IEC material in braille	Human Resource, IEC materials, financial resource	30,000.00	MoH	MOH/Government Printers

Strategy	Program	Activities	Location	Indicator	Input	Cost (ZMW)	Potential Source funds	Resp. Agency/Dept
Objectives	ENHANCE ACCESS TO QUALITY, EQUITABLE AND INCLUSIVE EDUCATION BY 2027							
Improve on staffing levels	Teacher Deployment	Deployment of 1490 teachers in the district.	Across the district	No. of teachers deployed in the district	Human Resource	350,000	GRZ, Cooperating partners	MOE
Promote Adult Literacy Program	Adult Education/Adult Literacy	Opening of 25 Adult literacy Education Centers	Munyama and Chinyanja	No. of adult Literacy Education Centers opened	Human Resource	25,000	GRZ, Cooperating partners	MOE
Promote Early Childhood Education	Early Childhood centers	Establishment of 16 more Early childhood centers in 16 primary schools	Justine Kabwe, Waya, Chililalila, Nakoli, Bwacha, Kawama, Bwacha, Chimanamani, Kalonga, Kasitu, Muwowo, East, Luangwa	No. of early childhood centers established in primary schools	Human Resource	25,000	GRZ, Cooperating partners	MOE
Promote Inclusive Learning and education	Special Education Centres	Establishment of 8 more special education centres	Mine, Grace Christian primary school, Kawama primary school, Munga primary school, Nakoli primary school	No. of special education centers established	Human Resource	10,000	GRZ, Cooperating partners	MOE
ICT Promotion	IT equipment	Procurement of 300 computers in schools	Across the district	No. of computers procured in schools	Human Resource	4,860,000	GRZ, Cooperating partners	MOE

Construction of staff houses	Infrastructure Development	To construct 900 staff houses in the district by 2027	Across the district	No. of staff houses constructed in the district by 2027	Man power, machinery, building materialsHuman Resource	4,544,700	GRZ, Cooperating partners	MOE
Rehabilitation of all dilapidated infrastructure	Infrastructure Development	Rehabilitation of DEBS office premises	DEBS Office	No. of offices rehabilitated at District education board office	Man power, machinery, building materials	4,544,700	GRZ, Cooperating partners	MOE
		Rehabilitation of 100 existing schools at all levels of education in the district	Across the district	No. of schools rehabilitated in the district	Man power, machinery, building materials	4,544,700	GRZ, Cooperating partners	
	Infrastructure development	Construction of 4 boarding secondary schools in the district	1 at Kafulamase 1 at Munga 1 at Kang'omba and 1 at nyenyezi	No. of boarding Secondary schools constructed	Man power, machinery, building materials	64,000,000	GRZ, Cooperating partners	MOE
Construction of new schools	Infrastructure development	Construction of 2 primary schools	Kasavasa - waya	No. of primary schools constructed	Man power, machinery, building materials	3,600,000	GRZ, Cooperating partners	MOE
	Infrastructure development	Construction of Kawama Primary school	Kawama	No. of permanent school structure constructed at Kawama	Man power, machinery, building materials	3,000,000	GRZ, Cooperating partners GRZ, Cooperating partners	MOE

Construction of an independent school structure	Infrastructure development	Construction of an independent day secondary school at Kasanda Malombe primary school	Kasanda Malombe	No. of Secondary schools constructed at Kasanda Malombe	Man power, machinery, building materials	8,000,000	GRZ, Cooperating partners	MOE
Enhance access to safe Water and sanitation supply in schools	Infrastructure development	Construction of ablution blocks in schools.	All Wards	No. of ablution blocks constructed	Man power, machinery, building materials	1,500,000	GRZ, Cooperating partners	MOE
Enhance access to safe Water and sanitation supply in schools	Infrastructure development	Drilling of boreholes and establishing Piped Water schemes	All Wards	No. of boreholes drilled and piped water schemes Established	Man power, machinery, building materials	300,000	GRZ, Cooperating partners	MOE
Construction of school Hall	Infrastructure development	Construction of school halls in 2 Secondary schools	Danford Chirwa and Raphael Kombe	No. of school halls constructed	Man power, machinery, building materials	26,000,000	GRZ, Cooperating partners	MOE
Construction of classroom blocks	Infrastructure development	Construction of 6X3 classroom blocks in 3 primary schools	Nakoli, bwafwano, Nkruma Ext	No. of classroom blocks constructed	Man power, machinery, building materials	9,000,000	GRZ, Cooperating partners	MOE
Procurement of desks	School Furniture	Procure 65000 desks in all schools	All schools in the district	No. of desks procured	Human Resource	104,000,000	GRZ, Cooperating partners	MOE
Construction of lab facilities in schools	Infrastructure development	Construction of 3 laboratories in the 22 respective Schools in the district.	All Dsistrict	No. of laboratories constructed in schools.	Man power, machinery, building materials	16,500,000	GRZ, Cooperating partners	MOE

Objectives	Improve sanitation coverage from 70% to 90% by 2027, Increase solid waste collection and disposal from 40% to 70% by 2027 Recycle 25% of all solid waste collected by 2027							
Maintenance and rehabilitation of sanitation infrastructure	Infrastructure development	Maintenance/ rehabilitation of sanitation facilities at the following markets:	Pollen (1), Njanji (1), Kachulu (1), Kamushanga (1), Mukobeko (1), Kasanda (1), Mine (1), Green Market (1)	No. of sanitation facilities maintained and rehabilitated at the markets	Man power, machinery, building materials	1,500,000	GRZ, Cooperating partners	Local Authority, GRZ
Maintenance of sanitation infrastructure	Infrastructure development	Maintenance of sanitation facility at Kabwe Intra bus station	CBD	No. of sanitation facilities maintained and rehabilitated at intra bus station	Man power, machinery, building materials	200,000	GRZ, Cooperating partners	Local Authority
Community Sanitation and Hygiene promotion	Sanitation and hygiene promotion	Intensify sensitization and demonstrations in sanitation and hygiene promotion	All the 29 Wards	No. of sensitisations and demonstrations in sanitation and hygiene promotion conducted	Man power, machinery, building materials	80,000	GRZ, Cooperating partners	KMC, GRZ
Emptying of On-Site Sanitation Facilities	Fecal Sludge Management	Sensitization and Orientation Training of Emptiers	All the 29 Wards	No. of sensitization and orientation trainings of emptiers conducted	Man power, machinery, building materials	45,000	GRZ, Cooperating partners	KMC, GRZ
		Procurement of EVAC, Tools; PPE's and Chemicals	All the 29 Wards	No. of EVAC, Tools, PPEs and Chemicals procured	Man power, machinery, building materials	140,000	GRZ, Cooperating partners	KMC, GRZ
		Procurement of Vacuum tanker	All the 29 Wards	No. of Vacuum tankers procured	Man power, machinery, building materials	2,000,000	GRZ, Cooperating partners	KMC, GRZ

Enhancement of solid waste management coverage	Solid Waste Management	Procure skip bins	CBD	No. of skip bins procured	Human Resource	490,000	GRZ, Cooperating partners	KMC, GRZ
Enhancement of solid waste management coverage	Solid Waste Management	Procure a Compactor truck		No. of compactor trucks procured	Human Resource	128,000	GRZ, Cooperating partners	KMC, GRZ
Enhancement of solid waste management coverage	Solid Waste Management	Procure 2 tipper trucks		No. of tipper trucks procured	Human Resource	1,050,000	GRZ, Cooperating partners	KMC, GRZ
Enhancement of solid waste management coverage	Solid Waste Management	Procure a Tractor Load Backhoe		No' of tractors load backhoe procured	Human Resource	500,000	GRZ, Cooperating partners	KMC, GRZ
Enhancement of solid waste management coverage	Solid Waste Management	Procure a Front End Loader		No. of front end loader	Human Resource	160,000	GRZ, Cooperating partners	KMC, GRZ
Enhancement of solid waste management coverage	Solid Waste Management	Procure a Bulldozer		No. of Bulldozers procured	Human Resource	280,000	GRZ, Cooperating partners	
Enhancement of solid waste management coverage	Infrastructure Development	Construction, operation and maintenance of an engineered landfill through Public Private Partnership (Build, Finance, Operate, Transfer Model)	Mpima	No. of engineered landfills constructed operationalised and maintained through Public Private Partnership (Build, Finance, Operate, Transfer model)	Human Resource	68,833,046	GRZ, Cooperating partners	Local Authority, PPP

Enhancement of solid waste management coverage	Solid Waste Collection	Engagement meetings with franchise companies and Community Based Enterprises in the six solid waste management zones	Six zones	No. of franchise companies and community based enterprises in the six solid waste management zones engaged	Human Resource	580,000	GRZ, Cooperating partners	Local Authority, PPP
Enhancement of solid waste management coverage	Recycling of solid waste	Engage 2 recycling companies and 2 material resource recovery companies with facilities	Local/ International	No. of recycling material resource recovery companies with facilities engaged	Human Resource	500,000	GRZ, Cooperating partners	Local Authority
Enhancement of solid waste management coverage	Community awareness on solid waste management practices	Engage media houses and other stakeholders through radio shows in awareness creation	All wards	No. of media houses and other stakeholders engaged through radio shows in awareness creation	Human Resource	380,000	GRZ, Cooperating partners	Local Authority
Enhancement of solid waste management coverage	Community awareness on solid waste management practices	Conducting District anti-litter awareness campaign.	All wards	No. of district anti-litter awareness campaign conducted	Human Resource	50,000	GRZ, Cooperating partners	Local Authority
		Incentivising the Keep Kabwe Clean Green & Healthy Campaign (KKCGHC)	All wards	No. of Keep Kabwe clean, green and Healthy Campaigns incentivized	Human Resource	50,000	GRZ, Cooperating partners	Local Authority
Enhancement of solid waste management coverage	Community awareness on solid waste management practices	Conducting meetings on Solid Waste Management (Ward Development Committees, Markets, Schools, Business Associations, etc.)	All wards	No. of meetings on Solid waste Management (Ward Development Committees market, Schools, Business Associations) conducted.	Human Resource	100,000	GRZ, Cooperating partners	Local Authority

Enhancement of solid waste management coverage	Community awareness on solid waste management practices	Engage street vendors on the best solid waste management practices	Freedom and Independence Way (CBD)	No. of street vendors on the best solid waste management practices engaged.	Human Resource	20,000	GRZ, Cooperating partners	Local Authority
Objectives	To attain at least 80% of clean and safe urban water supply within 5 years							
The LA in collaboration with LWSC Improve access to clean and safe water supply	Infrastructure development and maintenance	Prepare maps for the peri urban areas to depict households without water points	Katondo, Waya, Makululu, Makandanyama, Kafulamase, LA	Number of maps prepared	Man power, machinery, building materials	10,000.00	LA	LA
The LA in collaboration with LWSC Improve access to clean and safe water supply	Infrastructure development and maintenance	Drill, test and equip new boreholes(Water scheme)	All wards	Number of boreholes drilled (water schemes)	Man power, machinery, building materials	1,040,000.00	KMC, GRZ	KMC, GRZ
		Rehabilitation of 52 boreholes	All wards	Number of boreholes rehabilitated	Man power, machinery, building materials	150,000.00	LgWSC	LgWSC
		Installation of water kiosks	Munyama, Munga, Chinyanja, Muwowo East, Muwowo West, Justin Kabwe, Nakoli, Waya, Kalonga (Kamushanga, Kakumbi and Makwati, Luansanse Kulamase, Chirwa, Njanji, Mpima	Number of water kiosks installed	Man power, machinery, building materials	2,160,000.00	Water Affairs	Water Affairs
Objectives	To provide quality adequate transport facilities (i.e. ambulances and utility vehicles) for smooth health service delivery							

Increase access to quality health care	Equipment and transport procurement and maintenance	Procure 4 basic standard ambulances	Kabwe district hub/zones	Number of ambulances procured	Human Resource	21,600,000	CDF	MOH/COOPERATING PARTNERS /CDF
		Procurement of 35 motorbikes	Kabwe district health office/health facilities	Number of motor bikes procured	Human Resource	4,200,000	CDF	
		Procurement of 2 Toyota Land Cruiser utility vehicles and 1 containerized truck	Kabwe District Health Office	Number of utility vehicles procured	Human Resource	3,600,000	CDF	
Objectives:		Reduce the maternal mortality ratio from 258 to 150 per 100 000 live births by end of 2024						

Increase access to quality health care	Infrastructure development	Construction of 24 maternity wings mother's shelter	Chowa Forest Health Post, Bruneli Health Post, Chankalamu Health Post, Chililalila Health Post, Chitakata A Health Post, Chitakata B Health Post, Hamududu Health Post, Kafulamase Health Post, Kalima Health Post, Kalwelwe Health Post, Kamakuti Health Post, Kang'omba Health Post, Makupu A Health Post, Makupu B Health Post, Mpima Dairy Rural Health Post, Munga Health Post, Munyama Health Post, Waya Health Post, Katondo Health Centre, Railway Surgery Health Centre, Mukobeko Medium, Mpima Prisons, Zambia Police, Kawama,	Number of maternity wings and mother's shelter constructed	Man power, machinery, building materials	1,000,000,200,000	MOH/CDF	MOH/CDF
Increase access to quality health care	Infrastructure development	Extension of 4 Maternity wings	Pollen, Bwacha, Kasanda, Natuseko	Number of maternity wings extended	Man power, machinery, building materials	3,200,000	MOH/CDF	

	Infrastructure development	Upgrading of Ngungu and Mahatma Gandhi to mini hospitals (construct a theatre, admission wards and physio block)	Mahatma Gandhi, Ngungu	Number of health centres upgraded to mini hospitals	Man power, machinery, building materials	8,000,000	MOH/CDF	MOH/CDF
		Upgrade 5 Health facilities (construction OPD block, Lab)	Kasavasa, Pollen, mukobeko T/S, Natuseko, Katondo	Number of health facilities upgraded with OPD block and Laboratory	Man power, machinery, building materials	4,000,000	MOH/GRZ	MOH/GRZ
		Construction of 2 health facilities in each Constituency	Kabwe Central and Bwacha Constituency	Number of health facilities constructed	Man power, machinery, building materials	10,000,000	MOH/GRZ	MOH/GRZ
		Construction of 2 Mortuaries	Makululu Mini and Katondo Mini Hospitals	Number of mortuaries constructed	Man power, machinery, building materials	50,000,000	MOH/GRZ	MOH/GRZ
		Construction of 1 District Hospital	Natuseko	Number of district hospitals constructed	Man power, machinery, building materials	150,000,000	MOH/GRZ	MOH/GRZ
		Expansion of 3 Laboratories	Katondo and Makululu Mini Hospitals, Bwacha	Number of health facilities expanded with Laboratories	Man power, machinery, building materials	90,000,000	MOH/GRZ	MOH/CDF /CO OPERATING PARTNERS
		Expansion of 2 Pharmacies	Chowa, Katondo urban	Number of Pharmacies expanded	Man power, machinery, building materials	300,000	MOH/GRZ	MOH/CDF

increase access to quality health care		Conduct inventory of available equipment	All Health facilities	Number of inventories conducted	Human Resource	-	MOH/GRZ	Ministry of Health
	Equipment procurement and maintenance	Procure BP Machines	All Health facilities	Number of BP machines procured	Human Resource	33,000.00	MOH/GRZ	Ministry of Health
		Procure Autoclaves	All Health facilities	Number of Autoclaves procured	Human Resource	53,000.00	MOH/GRZ	Ministry of Health
		Procure Laundry Machines	All Health facilities	Number of laundry machines procured	Human Resource	609,500.00	MOH/GRZ	Ministry of Health
		Procure Genxpert	Bwacha and Kabwe Central Constituency	Number of Genxpert procured	Human Resource	10,886,590.00	MOH/GRZ	Ministry of Health
		Procure x-ray machines	Mahatma Gandhi, Ngungu, Katondo and Makululu Mini Hospitals	Number of X-ray machines procured	Human Resource	2,618,291.18	MOH/GRZ	Ministry of Health
		Procure CD4 Machines	All Health facilities	Number of CD4 Machines procured	Human Resource	8,378,531.79	MOH/GRZ	Ministry of Health
	Maternal healthcare	Conduct community meetings on early ANC bookings and the importance of institutional deliveries	All wards	Number of community meetings held	Human Resource	60,000	MOH/GRZ	MCH
		Advocate for male partners to attend antenatal clinics	All wards	Number of male partners attended to	Human Resource	- 70,000	MOH/GRZ	Nursing Officer MCH
		Follow up of maternal and neonatal deaths in the community	All wards	Number of follow ups made	Human Resource	35,000	MOH/GRZ	Nursing Officer MCH
		Hold maternal and neonatal Review meetings	All wards	Number of meetings held	Human Resource	30,000	MOH/GRZ	Nursing Officer MCH

Objectives:		Increase number of health facilities with functional waste management infrastructure from 10 to 19 by the end of 2024						
Strengthen public health	Infrastructure development	Construction of 19 Incinerators	Pollen Health Centre, Bruneli Health Post, Chililalila Health Post, Kafulamase Health Post, Kalwelwe Health Centre, Kang'omba Health Post, Kasavasa Rural Health Centre, Mukobeko Township Urban Health Centre, Waya Health Post, Magandanyama Health Post, Mahatma Gandhi Health Centre, Katondo Health Centre, Makululu Urban Health Centre, Nakoli Health Centre, Kawama Health Centre, Railway Surgery Health Centre, Mukobeko Medium, Mpima Prisons, Zambia Police	Number of incinerators constructed	Man power, machinery, building materials	2,850,000	MoH, GRZ	CDF

	Infrastructure development	Construction of 19 Placenta Pits	Pollen Health Centre, Bruneli Health Post, Chililalila Health Post, Kafulamase Health Post, Kalwelwe, health Centre, Kang'omba Health Post, Kasavasa Rural Health Centre, Mukobeko Township Urban Health Centre, Waya Health Post, Magandanyama Health Post, Mahatma Gandhi Health Centre, Katondo Health Centre, Makululu Urban Health Centre, Nakoli Health Centre, Kawama Health Centre, Railway Surgery Health Centre, Mukobeko Medium, Mpima Prisons, Zambia Police	Number of Placenta Pits constructed	Man power, machinery, building materials	950,000	MoH, GRZ	MOH/CDF
--	----------------------------	----------------------------------	--	-------------------------------------	--	---------	----------	---------

	Waste management	Rehabilitation of 16 incinerators	Chitakata A Health Post, Chitakata B Health Post, Hamududu Health Post Makupu A Health Post, Makupu B Health Post Ngungu, Natuseko, Chankalamu Health Post, Hamududu Health Post, Kalima Health Post, Kalwelwe Health Centre, Kamakuti Health Post, Mpima Dairy Rural Health Centre, Munga Health Post, Munyama Health Post, Kasanda Health Centre	Number of incinerators rehabilitated	Man power, machinery, building materials	400,000	MoH, GRZ	MOH/CDF
Increase the number of health facilities with improved access to safe and clean water from 23 to 42 by 2027								

	Water development	Construction of 19 boreholes	Chankalamu Health Post, Chililalila Health Post, Chitakata A Health Post, Chitakata B Health Post, Chowa Forest Health Post, Hamududu Health Post, Kafulamase Health Post, Kalima Health Post, Kamakuti Health Post, Makupu A Health Post, Makupu B Health Post, Munga Health Post, Munyama Health Post, Waya Health Post, Magandanyama Health Post, Kangomba Health Post, Brunelli Health Post, Mpima Dairy Health Post, Mpima Prisons Health Post	Number of boreholes	Man power, machinery, building materials	4,750,000	MoH, GRZ	CDF/PART NERS
--	-------------------	------------------------------	---	---------------------	--	-----------	----------	---------------

	Infrastructure development	Construction of 57 waterborne closets	Chankalamu Health Post, Chililalila Health Post, Chitakata A Health Post, Chitakata B Health Post, Chowa Forest Health Post, Hamududu Health Post, Kafulamase Health Post, Kalima Health Post, Kamakuti Health Post, Makupu A Health Post, Makupu B Health Post, Munga Health Post, Munyama Health Post, Waya Health Post, Magandanyama Health Post, Kangomba Health Post, Brunelli Health Post, Mpima Dairy Health Post, Mpima Prisons Health Post	Number of water borne closets constructed	Man power, machinery, building materials	8,550,000	MoH, GRZ	CDF/PART NERS
Objectives:	Increase the number of facilities with secured boundaries from 4 to 9 and secure 35 properties with Title Deeds by 2027							
Increase access to quality health care	Infrastructure development	Construction of 35 boundary wall fences	Bruneli Health Post, Chankalamu Health Post, Chililalila Health Post, Chitakata A Health Post, Chitakata B Health Post, Chowa Forest	Number of boundary wall fences constructed	Man power, machinery, building materials	700,000.00		CDF
Secure of 35 property titles	Infrastructure development	Securing of 35 property titles	Health Post, Chitakata A Health Post, Chitakata B Health Post, Chowa Forest	Number of properties secured with title deed	Human Resource	100,000.00	MoH, KMC	KCM/Ministry of Lands

			Health Post, Chowa Urban Health Centre, Hamududu Health Post, Kafulamase Health Post, Kalima Health Post, Kalwelwe Health Centre, Kamakuti Health Post, Kang'omba Health Post, Kasanda Urban Health Centre, Kasavasa Rural Health Centre, Katondo Mini Hospital, Katondo Urban Health Centre, Kawama Urban Health Centre (Kabwe), Mahatma Ghandhi Memorial Urban Health Centre, Makululu Mini Hospital, Makululu Urban Health Centre, Makupu A Health Post, Makupu B Health Post, Mpima Dairy Rural Health Centre, Mukobeko Township Urban Health Centre, Munga Health Post, Munyama Health Post, Nakoli Urban Health					
--	--	--	--	--	--	--	--	--

			Centre, Natuseko Urban Health Centre, Ngungu Urban Health Centre, Pollen Urban Health Centre, Railway Surgery Urban Health Centre, Waya Health Post, Magandanyama Health Post					
Objectives:	To increase user friendly beds for physically challenged mothers from 0- 84 by 2027							
Strengthen public health	Maternal healthcare	To procure 44 user friendly beds	All 42 health centres	Number of beds procured	Human Resource	500,000.00	MoH, KMC	MoH, KMC
Objectives:	To increase the number of facilities providing food supplements from 5 to 42 by 2027							
Enhance food security and nutrition	Supplementati on and micro- nutrients fortification	Provision of food supplements (in relation to remediating the impact of lead poisoning)	All the 42 Health Facilities	Number of health facilities provided with food supplements	Human Resource	1,000,000.00	MoH	CDF/Min of Agriculture/ Min of Com Dev/Znerip , SUNTA
		Enhcnace Growth Monitoring Promotion (GMP)	All wards	Number of GMP conducted	Human Resource	30,000.00	MoH	
		Orientation of staff in the Care Group Model	All wards	Number of staff oriented	Human Resource	30,000.00	MoH	
Objectives:	To increase the number of facilities providing visual, hearing and movement aids for PLWD by 2027							

Strengthen public health	Health education promotion	Provision of assistive devices (visual, hearing and movement aids)	42 Health Facilities	Number of health facilities	HUman Resource, (visual, hearing and movement aids), finacial resource	420,000.00	MoH	CDF/Min of Social Welfare/ZA PD
Objectives:	To increase the number of facilities with access ramps from 2 to 42 by the end of 2027							
Increase Access to Quality Health Care health	Infrastrucuture Development	Construction of 42 ramps at Health centres	42 Health Facilities	Number of facilities with ramps	Human Resource, building materials, finacial resource	420,000.00	MoH	CDF/Min of Social Welfare/ZA PD
Objectives:	To train health personnel in sign language interpretation from 0 to 84 by the end of 2027							
Strengthen public health	Health education promotion	Training of health personnel in sign langauge and alternative communication methods	All 42 Health Facilities	Number of health personnel trained	Human Resource, IEC materials, finacial resource	75,000.00	MoH	MOH
Objectives:	To increase on the number of facilities with IEC material printed in braille from 0 to 42 by the end of 2027							
Strengthen public health	Health education promotion	Printing of IEC material in braille	All 42 health facilities	Number of Health Facilities with IEC material in braille	Human Resource, IEC materials, finacial resource	30,000.00	MoH	MOH/Gove rnment Printers
Objectives:	Reduce the Malaria incidence from 141 per 1000 to 70 per 1000 by the end of 2027							

Strengthen public health	Disease prevention and control	Distribution of ITNs Conduct Indoor Residual Spraying Conduct Community Engagement and Sensitization Meetings	All wards	Number of ITNs distributed	Human Resource, ITNs, financial resource, chemicals	220,000.00	MOH/CO OPERATING PARTNERS	MOH/CO OPERATING PARTNERS
	Vector control	Sensitization meetings in malaria prevention and control	All wards	Number of sensitization meetings held	Human Resource, financial resource, IEC materials	40,000.00	MOH/CO OPERATING PARTNERS	
Increase knowledge in malaria case management	Case management	Conduct mentorship in malaria case management	All wards	Number of mentorship in malaria case management conducted	Human Resource, financial resource, IEC materials	25,000.00	MOH/CO OPERATING PARTNERS	
75% household sprayed against mosquitoes	Vector control	Indoor Residual Spray (IRS) micro planning	All wards	Number of micro planning meetings held	Human Resource, financial resource, stationary	50,000.00	MOH/CO OPERATING PARTNERS	
		Enumeration of households	All wards	Number of households enumerated	Human Resource, financial resource, stationary	60,000.00	MOH/CO OPERATING PARTNERS	
		Recruiting of spray operators	CBD	number of spray operators recruited	Human Resource, financial resource, stationary	15,000.00	MOH/CO OPERATING PARTNERS	

		Training of spray operators	CBD	number of spary operators trained	Human Resource, finacial resource, stationry	150,000.00	MOH/CO OPERATING PARTNERS	
Objectives	Reduce the HIV positivity rate from 12% to 7% by the end of 2027							
Strengthen public health	Disease prevention and control	Initiate HIV positive clients on ART treatment	Entire District	Number of HIV patients initiated on ART	Human Resource, finacial resource	25,000.00	MOH/CO OPERATING PARTNERS	MoH, CP
		Conduct Voluntary Medical Male Circumcision (VMMC)		Number of VMMCs conducted	Human Resource, finacial resource, fuel	50,000.00	MOH/CO OPERATING PARTNERS	
Objectives	To increase Tuberculosis notification from 662/1000 to 225/1000 by 2027							
Strengthen public health	Disease prevention and control	Conduct TB awareness campiagns across the district	Entire District	Number of TB awareness campaigns conducted	Human Resource, finacial resource, fuel	50,000.00	MOH/CO OPERATING PARTNERS	MoH, CP
		Conduct mass screening of inmates in correctional facilities	Mpima prisons, Mukobeko maximum and medium	Number of inmates screened	Human resource, transport	50,000.00	MOH/CO OPERATING PARTNERS	
Objectives	To increase access to Sexual Reproductive Health Rights by contrsucting Youth Friendly spaces in all health facilities by 2027							
Increase access to quality health care for adolescents	Infrastructure development	Construction of youth friendly spaces	42	Number of youth friendly spaces constructed	Human Resource, IEC material	2,100,000.00	MOH/CO OPERATING PARTNERS	MoH, CP
Objectives	To reduce the prevalence of teenage pregnancies from 29% to 20% by the end of 2027							
Strengthen public health	Health education promotion	Conduct outreach in and out of school	All schools in the District	Number of outreaches conducted	HUman Resource, IEC material	30,000	MOH/CO OPERATING PARTNERS	MoH, CP

		Conduct mentorship to facilities on delivery of adolescent health services	All Health facilities	Number of mentorships conducted	Human Resource, IEC material	50,000	MOH/CO OPERATING PARTNERS	
--	--	--	-----------------------	---------------------------------	------------------------------	--------	---------------------------	--

Table 54: Implementation Plan Framework: -Environmental Sustainability (8NDPPillar 3)

Strategy	Program	Activities	Location	Indicator	Input	Cost (ZMW)	Potential Source funds	Resp. Agency/Dept
Objective	To reduce the rate of deforestation from by the end of 2027							
Development of integrated natural resource management plans for effective forest management	Forestry management	Development of Integrated Natural Resource Management Plan	CBD	No. of plans prepared	Stationary, Fuel, Human resource	100,000	FD, KMC, GRZ	Forestry Department
Promotion of forest-based enterprises	Forestry management	Conducting 30 Beekeeping trainings to 900 farmers	All Wards	No. trainings conducted, No. trained	Stationary, Fuel, Human resource	70,000	FD, KMC, GRZ	Forestry Department
Promotion of forest-based enterprises	Forestry management	Conducting 5 Mushroom propagation trainings to 150 farmers	All Wards	No. trainings conducted, No. trained	Stationary, Fuel, Human resource	75,000	FD, KMC, GRZ	Forestry Department

To reduce deforestation through establishment of 500 woodlots by 2026	Forestry management	Establishment of 500 woodlots by 2026	All Wards	No. woodlots created	Stationary, Fuel, Human resource	105,000	FD, KMC, GRZ	Forestry Department
To reduce deforestation through establishment of 100 agroforestry plots by 2026	Forestry management	Establishment of 100 agroforestry plots	All Wards	No. of plots created	Stationary, Fuel, Human resource	98,000	FD, KMC, GRZ	Forestry Department
To reduce deforestation through establishment of 10 fruit orchards by 2026	Forestry management	Establishment of 10 fruit orchards by 2026	All Wards	No. of orchards created	Stationary, Fuel, Human resource	350,000	FD, KMC, GRZ	Forestry Department
To reduce deforestation through establishment of 10 tree nurseries establishment by 2026	Plantation establishment and management	Establishment of 10 tree nurseries	All Wards	No. of tree nurseries created	Stationary, Fuel, Human resource	450,000	FD, KMC, GRZ	Forestry Department
To reduce deforestation by restocking and managing 2,000 ha of gazetted forests	Forestry management	Restocking and managing 2,000 ha of gazetted forests	All Wards	No. of forests restocked, No. of trees planted	Stationary, Fuel, Human resource	450,000	FD, KMC, GRZ	Forestry Department
To reduce deforestation by conducting 45 Community mobilization and sensitization	Forestry management	Conducting 45 Community mobilization and sensitization meeting	All Wards	No. of trainings conducted	Stationary, Fuel, Human resource	85,000	FD, KMC, GRZ	Forestry Department
To reduce deforestation through formation of 25 CFMG to practice community	Forestry management	Formation of 25 CFMG to practice community forestry	All Wards	No. of CFMG formed	Stationary, Fuel, Human resource	55,000	FD, KMC, GRZ	Forestry Department

Forestry								
To reduce deforestation	Forestry management	Conduct 25 Trainings in Natural Resource Management	All Wards	No. of trainings conducted	Stationary, Fuel, Human resource	45,000	FD, KMC, GRZ	Forestry Department
Promotion of Crop Diversification & Yield Improvement by conducting trainings to 2, 000 farmers	Forestry management	Training of 2000 farmers in green manure/agroforestry	All Wards	No. of trainings conducted No. of farmers trained	Stationary, Fuel, Human resource	95,000	FD, KMC, GRZ	Agriculture
To protect forests through Introduction of bio-char by training 200 farmers	Forest protection	Training of 200 farmers in biochar	All Wards	No. of farmers trained	Stationary, Fuel, Human resource	100,000	FD, KMC, GRZ	Forestry Department
Introduction of Bio digesters	Forest protection	Training of 200 farmers in Bio digesters	All Wards	No. of farmers trained	Stationary, Fuel, Human resource	100,000	FD, KMC, GRZ	Forestry Department
Land management and conservation on	Conservation agriculture	Training of 27,521 smallholder farmers in Conservation agriculture practices	All Wards	No. of farmers trained	Stationary, Fuel, Human resource	250,000	FD, KMC, GRZ	Agriculture
		Training of 12,271 farmers in Soil fertility Management	All Wards	No. of farmers trained	Stationary, Fuel, Human resource	200,000	FD, KMC, GRZ	Agriculture
Objective	To enhance disaster risk reduction and response mechanisms by 2027							

Weather and climate management	Monitoring of weather stations	Maintenance of 2 weather stations	CBD	No. of stations maintained	Stationary, Fuel, Human resource	50,000	Meteorological Department	Meteorological Department
		To conduct 172 sensitization of metrological products	All Wards	No. of sensitization meetings	Stationary, Fuel, Human resource	75,000	Meteorological Department	Meteorological Department
	Health Education on Chemical waste management	Sensitization of 50 industries on proper and safe chemical waste management	All Wards	No. of sensitization meetings	Stationary, Fuel, Human resource	45,000	KMC, Forestry, Meteorological Department	KMC, Forestry,
Objective	To promote sustainable environment and natural resource management by the end of 2027							
Conduct Health Education.	Forest protection and management	To conduct 59 communities sensitization meetings on pollution prevention and control	All Wards	No. of sensitization meetings	Stationary, Fuel, Human resource	75,000	KMC, Forestry, Meteorological Department	Council
Law enforcement	Forest protection and management	Conducting 60 highway patrols to check on illegal trafficking	All Wards	No. of sensitization meetings	Stationary, Fuel, Human resource	80,000	KMC, Forestry, Meteorological Department	Forestry Department
Boundary Clearing	Forest protection and management	To protect forests by conducting forest boundary clearing to the length of 1, 125 kilometers Boundary clearing	All Forests	No. of kilometers inspected	Stationary, Fuel, Human resource	25,000	KMC, Forestry, Meteorological Department	Forestry Department
Conducting Controlled Burning	Forest protection and management	Conducting Controlled Burning of 65, 020 hectares of forest area	All Forests	No. of hectares controlled	Stationary, Fuel, Human resource	25,000	KMC, Forestry, Meteorological Department	Forestry Department

Dissemination of seasonal forecast	Forest protection and management	To carry out Media and electronic disseminations weather seasonal forecasts	All Wards	No. of disseminations conducted	Stationary, Fuel, Human resource	50,000	KMC, Forestry, Meteorological Department	Forestry Department
Forest protection and management	Forest protection and management	Procurement of 4x4 Land cruiser for forestry operations	All Wards	No. of vehicles procured	Stationary, Fuel, Human resource	2,000,000	KMC, Forestry, Meteorological Department	Forestry Department
Forestry management	Forest protection and management	Formation of 50 CBNRMG to practice sustainable utilization of natural resources	All Wards	No of CBNRMG formed	Stationary, Fuel, Human resource	35,000	KMC, Forestry, Meteorological Department	Forestry Department
Forestry extension	Forest management	Conduct 290 community mobilization and awareness meetings on CBNRM	All Wards	No of awareness meetings conducted	Stationary, Fuel, Human resource	45,000	KMC, Forestry, Meteorological Department	Forestry Department
Forestry extension	Forest management	Conduct training of 50 CBNRMG on sustainable utilization and management of natural resources	All Wards	No of trainings conducted	Stationary, Fuel, Human resource	35,000	KMC, Forestry, Meteorological Department	Forestry Department
Law enforcement	Forest protection and management	Eviction of 20, 000 squatters from forest reserves in the District	All Wards	No of evictions conducted	Stationary, Fuel, Human resource	25,000	KMC, Forestry, Meteorological Department	Forestry Department
Law enforcement	Forest protection and management	Identification and preservation of 10 water recharge points in the district	All Wards	No. of recharge points identified	Stationary, Fuel, Human resource	18,000	KMC, Forestry, Meteorological Department	KMC, WARMA
Objective	To remediate lead poisoning by 2027							
Remediate lead poisoning	Lead Poisoning and Prevention	To conduct tree/grass planting of 1500 plants in the district	Former Mine Areas	No of trees planted	Stationary, Fuel, Human resource	50,000	KMC, Forestry, Meteorological Department	KMC (Zmrip)
		Conduct 50 community lead poisoning sensitization meetings	Former Mine Areas	No. of meetings conducted	Stationary, Fuel, Human resource	27,000	KMC, Forestry, Meteorological Department	KMC (Zerip)

Table 55: Implementation Framework: Good Governance Environment (8NDP Pillar 4)

Strategy	Program	Activities	Location	Indicator	Input	Cost (ZMW)	Potential Source funds	Resp. Agency/Dept
Objectives	To develop and maintain infrastructure for sports and recreation by 2025							
The LA in conjunction with the Private sector to develop and rehabilitate existing sports and recreation facilities	Promotion of Public Private Partnerships	Preparation and submission of concept note to Private sector to lobby for funds	Chowa (Old Play , VIMU, Ngungu Youth Resource Centre, Winter Muleya Stadium, Godfrey Ucar Chitalu Stadium	Number of concept notes prepared and submitted to the private sector	Human Resources	10,000	GRZ, Cooperating partners	Ministry of Youth, Sports, and Child Development
	Construction, Rehabilitation and maintenance of sports and recreation facilities.	Construction of sports facility	Chowa (Old Play , VIMU, Ngungu Youth Resource Centre	Number of sports facilities constructed	Man power, machinery, building materials	25,000,000	GRZ, Cooperating partners	
		Rehabilitation and maintenance of sports facilities	Winter Muleya Stadium,	Number of sports facilities rehabilitated	Man power, machinery, building materials	6,000,000	GRZ, Cooperating partners	
			Godfrey Ucar Chitalu Stadium,	Number of sports facilities rehabilitated	Man power, machinery, building materials	2,500,000	GRZ, Cooperating partners	
			Indeni Grounds	Number of sports facilities rehabilitated	Man power, machinery, building materials	600,000	GRZ, Cooperating partners	

		Rehabilitation and maintenance of recreation facilities	Clayton Park	Number of recreation facilities rehabilitated	Man power, machinery, building materials	1,600,000	GRZ, Cooperating partners	
Objectives	To provide adequate and affordable land for 2500 plots by 2027							
Creation of plots	land alienation for housing development	Socio economic survey	Kangomba, Mpima, Waya, Shakumbila	Number of plots created	Manpower, GPS, Fuel, stationary	2,645,595	KMC	KMC, MoL
		Creation of LAPs	Kangomba, Mpima, Waya, Shakumbila	Number of LAPs prepared			KMC	KMC, MoL
		Numbering of plots	Kangomba, Mpima, Waya, Shakumbila	Number of plots numbered		417,000	KMC	KMC, MoL
		Survey of plots	Kangomba, Mpima, Waya, Shakumbila	Number of plots surveyed	Manpower, equipment, fuel	5,735,112	KMC	KMC, MoL
Objective	To upgrade 14 informal settlements by 2027							
Servicing of unplanned Settlement areas	Informal settlement upgrading	Registration and numbering of properties in informal settlements	Makululu, Moomba, Zambezi, Kachulu, Makwati, Katondo, Chikwata, Luansase, Kawama,	Number of properties registered	Manpower, equipment, fuel, stationery	2,081,452	KMC	KMC, Medeem
	Servicing of unplanned Settlement areas	Extension of water pipes for 5000 households by Lukanga Water and Sewerage Company	Makululu, Moomba, Zambezi, Kachulu, Makwati, Katondo	Number of households in informal settlements connected to LWSC	Man power, machinery, materials	52,000,000	KMC, GRZ	KMC, Lukanga Water

		Extension of power lines for 1500 households electricity	Makululu, Moomba, Zambezi, Kachulu, Makwati, Katondo	Number of households in informal settlements supplied with electricity	Man power, machinery, materials	72,000,000	ZESCO	KMC, ZESCO
		Grading of roads 360km	All Wards	Number of kilometres of roads graded	Man power, machinery, materials	25,000,000	GRZ, RDA, KMC	KMC, RDA, ZNS
Objective	To develop an integrated information land management system by 2027							
Introduction of E-planning permission	ICT infrastructure development	setting up of ICT infrastructure	KMC	Number of online applications for planning permission processed	Manpower, network materials	350,000	KMC	KMC, GRZ SMART Zambia
Establishment of a GIS unit	ICT infrastructure development	Installation of GIS Software and equipment	KMC	100% GIS equipment installed	Manpower, GIS equipment	450,000	KMC	KMC
Improve ICT connectivity	ICT infrastructure development	Network configuration	KMC	Number of Departments connected	Manpower, network materials	600,000	KMC	KMC, GRZ SMART Zambia
increase transparency and accountability through the introduction of E-Payment system	E-Levy Revenue system	Procurement of Point of Sale Machine, procurement of paper for receipting	Intra Bus Stations, Parking Lots	Number of E-Services provided by the LA	Manpower, network materials	60,000	KMC	KMC, GRZ SMART Zambia, Private

Objectives	To increase the availability of firefighting and rescue services to 60% of the population by 2027							
The Local authority in conjunction to undertake firefighting and rescue services in the urban and rural areas	Fire prevention and Rescue	Expansion and rehabilitation of existing fire services infrastructure	CBD	Number of fire service infrastructure expanded and rehabilitated	Manpower, machinery building materials	1,200,000	KMC, GRZ	KMC, GRZ
		Building of a new fire station	CBD	Number of Fire stations constructed	Manpower, machinery building materials	12,500,000	KMC, GRZ	KMC, GRZ
		Acquisition and replacement of firefighting equipment	CBD	Number of firefighting equipment acquired and replaced	Man power, machinery and equipment	650,000	KMC, GRZ	KMC, GRZ
The Local authority in conjunction to undertake firefighting and rescue services in the urban and rural areas	Fire prevention and Rescue	Community sensitization on fire safety trainings in all the wards	All Wards	Number of community sensitization conducted	Man power, fuel, stationary	250,000	KMC	KMC, GRZ
		Formulation of fire prevention committees	All Wards	Number of Fire prevention committee established	Man power, fuel, stationary	100,000	KMC	KMC, GRZ
Objectives	To improve rule of law and order by establishing a Fast track Court and construction of a police station 2027							
Improve rule of law and order	Infrastructure Development	Construction of 6 police station	Kaputula, Waya, Mukobeko, Kawama, Pollen, Makululu,	Number of Police Stations constructed	Man power, machinery, building materials	1,050,000	KMC, GRZ	Council/Home Affairs

		Construction of 100 police station houses at proposed Mpima Police Station		Number of Police Stations constructed	Man power, machinery, building materials	1,050,000	KMC, GRZ
		Construction of 4 Police Posts	Kasabasa, Munyama, Kakonde, Shakumbila	No. of Police posts constructed	Man power, machinery, building materials	1,200,000	KMC, GRZ
		Completion of Katondo police post	Katondo	No. of Police posts completed	Man power, machinery, building materials	600,000	KMC, GRZ
		Completion of Mangandanyam a police post	David Ramusho Ward	No. of Police posts completed	Man power, machinery, building materials	800,000	KMC, GRZ
	Fast Track Court	Establishment of a Fast Track Court	CBD	No. established	Human Resource	28,700	KMC, GRZ
	Development Control	Conduct field inspections	Across the District	Number of inspections conducted	Manpower, vehicle, equipment	750,000	KMC,GRZ

5.2 FINANCIAL PLAN FOR THE PERIOD OF FIVE (5) YEARS - 2023 TO 2027

5.2.1 Purpose

The purpose of this Long-Term Financial Plan is to create awareness regarding financial challenges and opportunities the Council could possibly face and inform the Institution's financial and operational decision makers to account for such possibilities. The five-year financial plan is a component of a comprehensive effort by the Council to improve its long-range financial management and planning.

5.2.2 Scope

The Council's Financial Plan for Fiscal Year 2022 through Fiscal Year 2025 addresses the revenues and expenditures of all Council funds (the General Fund and special funds) over a five year planning period.

5.2.3 Development Process

The Council's financial plan has been created using public finance best practices which define financial forecasting and long-term financial planning as follows:

- i. Financial forecasting is the process of projecting revenues and expenditures over a long term period, using assumptions about economic conditions, future spending scenarios, and other salient variables.
- ii. Long-term financial planning is the process of aligning financial capacity with long-term service objectives [emphasis added]. Financial planning uses forecasts to provide insight into future financial capacity so that strategies can be developed to achieve long-term sustainability in light of the government's service objectives and financial challenges.

The main tasks required to create the Long-Term Financial Plan were the following:

- i. Review best practices, the work of peer jurisdictions, and academic and professional materials on the topic;
- ii. Review the of the Council's past performance of both revenue and expenditure
- iii. Analysis of the District's economic environment to identify the major financial and operational challenges and opportunities that the Council might face over the coming years;

5.2.4 Forecast Background

The Council staff consulted numerous resources and followed public finance best practices when creating the Long-Term Financial Plan and the approved 2022 budget was used as the basis of the forecast. Staff assumed that future service levels and revenue sources would remain at current levels (those in the approved 2022 budget, referred to as “status quo”). Staff then forecasted revenues and expenditures for succeeding years by applying assumptions about possible future changes in economic conditions that could impact revenues and expenditures. Revenues and expenditures are impacted by both cyclical and irregular changes in the District’s economy and demography. Future revenues and expenditures can be estimated using a number of techniques including qualitative/judgmental analysis and quantitative analysis. City staff used both qualitative and quantitative analysis as part of this forecast, as described below.

5.2.5 Revenue and Expenditure History

The Council’s revenue history and forecast is described below. As background, Table A and B below illustrates the five-year history of the Council’s revenue and expenditure collected by source.

Table 56: Five Year Revenue History

Revenue Resources	2018	2019	2020	2021	2022

5.3 Programme for the Preparation of Local Area Plan

5.3.1 Local Area Plan 2022

The preparation of Local Area Plans are a requirement for all local authorities as provided for in Section 21 of the Urban and Regional Planning Act No 3 of 2015 of the Laws of Zambia for use as planning instrument to provide detailed proposals for the

development of areas designated for development under an Integrated Development Plan.

The Kabwe IDP has identified areas within the IDP area where Local Area Plans (LAPs) will be needed in order to realize development outcomes for the communities. Local Area Plans are mostly areas proposed to be developed as Nodes, Densification, Infill and Containment areas. Some of these areas currently exist, while others are being proposed.

Regardless of the purpose for which a LAP will be prepared, it will directly link to the implementation and financial plan and take into account the processes and proposals of other LAPs in the area of the LA and the neighbouring local authority. Distinct land use standards and controls will be applied in different LAPs, while ensuring the highest and best use of Land. The identified areas are Mpima, Shankumbila Area, and Kang'omba Settlement.

For the purpose of realizing the vision of making the IDP area an inclusive and sound environment for all by 2030, all LAPs will ensure that proposals for the development of a LAP are prepared in accordance with the principles of the IDP. It is anticipated that all land under a LAP shall offer secure land tenure for long-term investments.

5.4 MONITORING AND EVALUATION PLAN

Monitoring and evaluation (M&E) is an integral component of the IDP; the M&E Plan ensures that the IDP brings about the change anticipated and that resources are effectively utilized. The Key Performance Indicators (KPIs) in the M&E Plan have been developed using the following five (5) principles as provided for in volume four (4) of the IDP guidelines on the preparation of the implementation program:

- Precise/ well-defined: The indicator is not ambiguous so as to ensure everyone interprets them the same and thus achieve the same results;
- Reliable: the indicator yields the same results on repeated trials attempts;
- Validity: the indicator measures what it intend to measure;
- Measurable: the indicator is measurable; if it cannot be measured, it is not a good indicator and;
- Practicable: The indicator is not be impractical to measure from a resource or cost perspective.

5.4.1 Monitoring – Processes and Tools

The process of monitoring will be undertaken at institutional and cluster level. At institutional level, institutions will undertake input monitoring to ensure that the targeted investments are made to produce planned outputs which are expected to generate development outcomes. At cluster level, the information generated by various institutions and sectors will be analysed against the set targets and information will be validated to assess performance of indicators in a particular development area.

The tools to support the M&E process will include the use of Budget Performance output matrices (OBB), Implementation Programme, monthly and quarterly reporting templates. These tools will facilitate the production of reports at Monthly, Quarterly and Annual intervals.

5.4.2 Monthly Reporting

The monthly reports will be done on a monthly basis by each institution on key development programmes and submitted for the information and consideration of management. The reports will ensure that implementation progress does not stagnate or deviate from the intended development outcomes.

5.4.3 Quarterly Performance Reporting

The quarterly performance reports will be consolidated and compiled from the institutional monthly reports covering key development programmes. The quarterly reporting is aimed at facilitating corrective action at management and implementation level in an integrated manner.

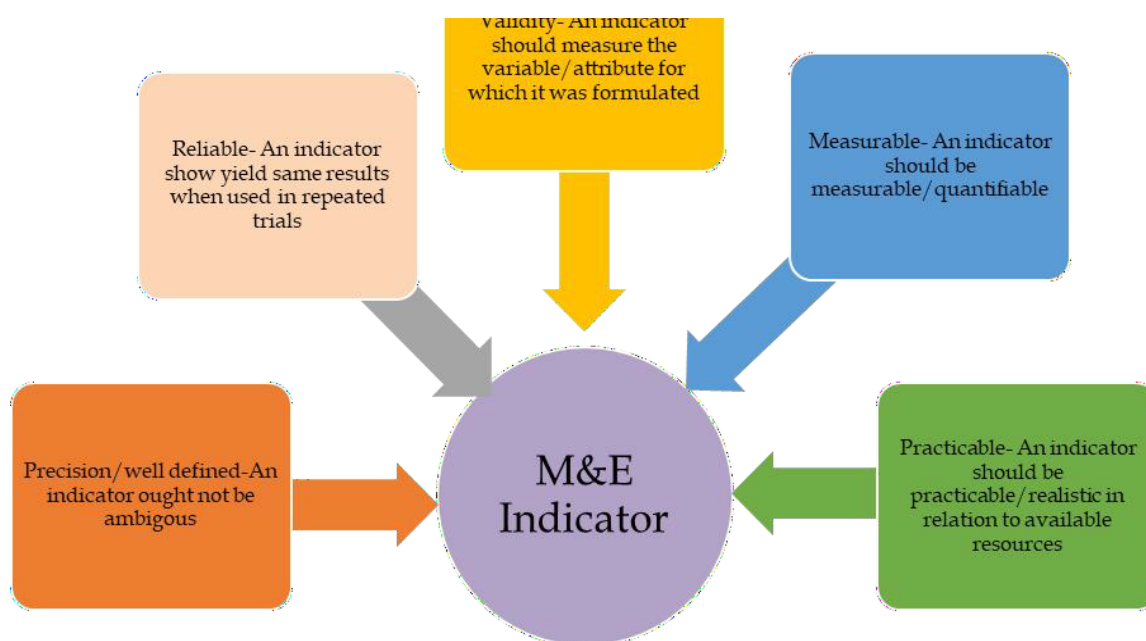

5.4.4 Evaluation

Given the emphasis on Result Management, the culture of evaluating sector programmes will be entrenched. Through continued collaboration with the line ministries and other stakeholders, emphasis will be placed on the need for periodically evaluating programmes in order to appraise strategies, document key lessons and take corrective measures where necessary. Evaluation will also aid in reinforcing programme implementation where positive trends are identified so as to maximise benefits and realise value for money.

5.4.5 Development of Indicators

The figure below shows the principles we considered when formulating the performance indicators in the M&E plan:

Figure 83: Monitoring and Evaluation Indicator

Source: *Guidelines for Integrated Development Planning: Preparing the Implementation Programme, Vol. 4 (MLG, 2019)*

The Local Authority will formulate an M&E team with clear roles and responsibilities decomposed as follows;

Table 59: Composition of Monitoring and Evaluation Team

Number	Role	Responsibilities	Organisation	Reporting
1	M&E Lead	Overall quality assurance of M&E Plan and performance tracking. Monitor and escalate risks Overall quality assurance of data collection and analysis methodologies Manage relationships with key stakeholder	Local Authority	District Development Coordination Committee (DDCC)
11	Data managers	Develop databases Develop data visualisation tools Coordinate with Government Departments to avoid duplication Develop and manage M&E plans and schedules	Local Authority and Line Ministries	M&E Lead
9	Data Analysts	Develop data collection and analysis methodologies Data collection Data analysis Input data into M&E tracking and assessment tools	Local Authority and Line Ministries	Data Managers
1	GIS expert	Link the Development Framework with the Spatial Development Framework Conduct GIS mapping as the IDP is being implemented Regularly update maps	Local Authority	Data manager (DDP)

5.4.6 Logical framework of Monitoring and Evaluation

Table 60: District Monitoring and Evaluation Economic Transformation and Job Creation

DISTRICT MONITORING & EVALUATION FRAMEWORK: ECONOMIC TRANSFORMATION AND JOB CREATION (8NDP PILLAR 1)																				
Strategies	Program	Activities	Location	Baseline	Target	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	Indicator	Freq	Responsible	
Improve access to rural and urban areas. Relevant	Infrastructure development	Objective 1: To develop and maintain 250km of safe and sustainable road network and drainage system by 2027																		
		Rehabilitation of 50Km damaged township roads and drainages	Entire district	0	50	10	10	10	10	10								Kilometers of township roads and drainages rehabilitated	Qtrly	KMC and RDA
		Construction and maintenance of 150 km feeder roads and drainages	Entire district	0	150 km	40	30	30	25	25								Kilometers of township roads and drainages rehabilitated	Qtrly	KMC and RDA
		Construction and maintenance of 50 Km township roads and drainages	Entire district	0	50km	10	10	10	10	10								Kilometers of township roads and drainages rehabilitated	Qtrly	KMC and RDA

		Gazetting/Street /naming of 120 undefined township/feeder roads	Entire district	0	120 streets	40	20	20	20	20							number of streets and undefined roads named	Anually	KMC
		Procurement of road construction equipment (grader, compactor, tipper, excavator)	Entire district	1	7		3		4								Number of graders procured	Anually	Kabwe M. Council
		Objective 2: To construct 2 bridges by 2027																	
		Construction of bridge	Munya ma Kalima	0	2		1	1									Number of bridges constructed	Qtrly	KMC
		Objective 3: To construct 1 Airport and rehabilitate 1 airstrip by 2022																	
Improve access to rural and urban areas. Relevant	Infrastructure development	Upgrading of Airstrip	Chililila	1	1		1										Number of Airstrips upgraded	Monthly	Kabwe Municipal/National Airport
		Construction of an Airport	Mpima	0	1			1									Number of Airstrips constructed	Monthly	National Airport
Improve access to rural and urban areas. Relevant	Infrastructure development	Objective 4: To protect 50km of railway infrastructure from encroachments and rehabilitate 140 km rail line stretch by 2027																	
		Repossession of 50KM encroached Rail land	Along the strip rail Reserves	0	50	10	10	10	10	10							Extent of encroached rail land repossessed	Monthly	Kabwe Municipal/ZRL

		Rehabilitation of the rail Line of 140 km	Entire district	0	140	28	28	28	28	28							Kilometers of rail line rehabilitated	Qtrly	Kabwe Municipal/ ZRL
Facilitate for Business Development among co-operatives and promotion and registration of co-operatives in different sectors	Cooperatives promotion and Development	Objective 5: To reduce poverty at Household level from 60% to 44.7% by 20227																	
		Conduct sensitization meetings on the formation of cooperatives in the identified priority sectors	All wards	0	29	9	20	0	0	0							Number of meetings	Anually	MSMED-Department of Cooperatives, Local Authority
		Formation and Registration of Co-operatives in different sectors	Across the district	200	1230	430	200	200	200	200							Number of cooperative	Anually	MSMED/KCM
		Conduct the training of selected cooperatives in viable value chains for their development	Across the district	200	1300	200	200	250	300	350							Number of cooperatives	Anually	MSMED-Department of Cooperatives, Local Authority
		Conduct training on how to develop business plans focusing on utilizing local opportunities at district level.	Across the district	150	1750	250	300	350	400	450							Number of business plans	Anually	MSMED-Department of Cooperatives, Local Authority

Establishment of bus stations for both local and long-distance travel	Construction and maintenance of Bus stations	Conduct sensitization meetings focusing on the provision of linkages in business development Support services	Across the district	0	1300	200	200	250	300	350								Number of business linkages	Anually	MSMED-Department of Cooperatives, Local Authority
		Objective 6: To compete 1 bus station and rehabilitate 2 ablution blocks on existing bus stations by 2027																		
		Completion of the Lukanga bus station	Lukanga Ward	1	1		1											Number of bus stations completed	8	KMC, MLGRD
		Rehabilitation of toilets in existing bus stations	Green Market Station	2	2	1	1											Number of toilets rehabilitated	8	KMC, MLGRD
Construction of modern markets and maintenance of existing ones.	Construction and maintenance of markets	Objective 7: To develop and maintain 13 markets by 2027																		
		Rehabilitation of toilets at Market	Chimanmani, Nakoli, Njanji, Katondo	0	4	2	2											Number of toilets rehabilitated	4	KMC, MLGRD
		Provision of market stalls to traders	Bwachama Market	0	1													Number of market stalls provided	1	KMC, MLGRD
		Improvement of market shelters in existing markets	Bwachama, Nakoli, Waya, Kalonga (Pollen	3														Number of market shelters improved	4	KMC, MLGRD

			, Kamus hanga market)																
		Drilling of 10 boreholes in markets	Bwach a and Kabwe Centra L	2	10	3	7										Number of boreholes drilled(wat er scheme)	4	KMC, MLGRD
Construction of modern markets and maintenance of existing ones.	Construction and maintenance of markets	Construction of 13 modern market shelters in the district (Zambezi, Ngungu, Kawama (Zambani area), Chililalila, Muwowo West (Chikupwi zone), Muwowo East (No man’s land between ZCS and K Mulonga small holding), Justin Kabwe , Katondo, Lukanga, Munga, Mpima, Kalonga (Makwati and Kakumbi), Highridge)	All Wards	0	13	3	10				2						number of market shelters constructed	4	KMC, MLGRD
Improve nt of Agriculture Infrastructu re developme nt	Objective 8: To Improve agriculture production and productivity by 2027																		
	Construction of one Farmer training center	Mutwe wansof U	0	1	0	1											Number of FTCs	8	

		Construction of 29 agriculture camp houses	Across the District	3	29	0	2	4	5	6	3	3	3	3	3	3	Number of camp houses	8	MoA
		Construction of 4 Agriculture block offices	Munya ma, Mpima, Waya and Munga	1	4	0	1		1		1		1				Number of block offices	9	MoA
Increase Hectares under irrigation	Promotion of Post-harvest handling facilities	Construction of 19 Storage Shed facilities.	All camps	0	19	0	2	4	6	7	2	2	2	2	2	2	Number of storage	144	MoA
	Irrigation farming promotion	Conduct Farmer sensitization meetings	Across the District	50	190	38	38	38	38	38							Number of meetings	Qtrly	MoA
		Conduct Farmer training	Across the District	19	95	19	19	19	19	19							Number of training	12	MoA
		Construction of a dam	Munya ma Block	50	1	0	0	1	0	0							Number of dams	6	MoA
Improvement of Agriculture extension services delivery	Extension Service Support	Recruitment of 10 camp officers	Across the district	19	10	0	3	3	2	2							Number of officers	Qtrly	MoA
		Procurement of 29 Motorbikes	Across the district	0	29	0	7	7	7	8	3	3	3	3	3	3	Number of motorbikes	Qtrly	MoA
		Procurement of Vehicles	Farmer Training center and DACO's office	1	2	0	1	1	0	0							Number of vehicles	2	MoA

Establishment of solar plants	Promotion of Agricultural Mechanization	Improvement of Farmer input support management system	Facilitation of Increased access to agriculture finances	Promote value addition
Alternative Energy	Agricultural Mechanization	Farmer input support	Agribusiness development	Value chain development
Establishment 9 of solar power plants	Conducting sensitization and training in agricultural mechanization	Support farmer beneficiaries with farming inputs (FISP)	Training of SMEs in agribusiness	Training farmers in value addition in various crops

		Identification and titling of land for 9 Solar Power Plants	Shakumbila, Makombe, Prospect	0	9		2	2	2	3	1	1	1	1	1	1	No of hectares titled	Annually	KCM
Wind energy		Establishment of 2 wind farms	Central and Bwacha	0	2					1		1					No of wind farms	Annually	KMC, Min of Green Energy
Promote value addition	Value chain development	Objective 9: To increase on number of crops on value chain addition from 2 to 4 crops by 2027																	
		Training farmers in value addition in various crops	Across the district	5	25		5		5		5		5		5		Number of farmers	Quarterly	MoA
Construction and Rehabilitation of Cultural Tourism and museum infrastructure	Infrastructure Development	Objective 10: To Promote Tourism Growth by 2027																	
		Rehabilitation of theatre houses	Kabwe Industrial Area	0	1	1											Number of theatre houses	Qtrly	Ministry of Tourism and Art
		Identification, rehabilitation and construction of crafts centers	Across the district	0	1		1										Number of crafts centers	Qtrly	Ministry of Tourism and Art
Development of Tourism Cultural Products	Tourism development	Identify and develop Home stay cultural tourism spaces	Across the district	0	4		1	1	1	1							Number of home stay cultural tourism spaces	Qtrly	Ministry of Tourism and Art
		Identify and mentor Traditional crafts practitioners	Across the district	0	20	4	4	4	4	4							Number of traditional crafts practitioners	Qtrly	Ministry of Tourism and Art

		Taking inventory of 2003 ICH convention and sensitization	Across the district	0	10	2	2	2	2	2							Number of inventories	Qtrly	Ministry of Tourism and Art
Development of Tourism Cultural Products	Tourism development	Identify, train and mentor Traditional crafts practitioners in value addition and production of quality crafts and establish markets linkages	Across the district	0	20	4	4	4	4	4							Number of traditional crafts practitioners	Monthly	
		Conduct Cultural Exhibitions and Tours at Heritage sites	Across the district	0	15	3	3	3	3	3							Number of cultural exhibitions and tours	Quarterly	Ministry of Tourism and Art
		Hold Cultural Carnival Festival / Roadshows	Across the district	5	30	5	5	5	5	10							Number of Cultural Carnival Festival / Roadshows	Annually	Ministry of Tourism and Art
		Link Cultural dance & bands groups with the hospitality industries, mines, security wings and others	Across the district	0	45	5	10	10	10	10							Number of Cultural dance & bands groups linked	Qtrly	Ministry of Tourism and Art
Identification and registration of Creative Industries enterprises and Artists	Enterprise Development Initiative	Identification and registration of Artists	Across the district	0	100	20	20	20	20	20							Number of Artists registered	Qtrly	Ministry of Tourism and Art
		Develop Creative Industries enterprises Value chain and Market linkages	Across the district	0	400	50	50	100	100	100							Number of value chain & market linkages created	Qtrly	Ministry of Tourism and Art

		Identified and register arts with PACRA, ZAMCOPs, Local Authority, Ministry of Commerce	Across the district	0	2000	250	250	500	500	500							Number of arts registered	Qtrly	Ministry of Tourism and Art
Identification and registration of Creative Industries enterprises and Artists	Talent and Entrepreneurship Skills Development and mentorship programs	Training and mentoring Artists in Talent and Business skills	Across the district	0	700	100	100	100	200	200							Number of Artists trained and mentored	Qtrly	Ministry of Tourism and Art
		Develop and hold Artists Shows and Exhibitions	Across the district	0	50	10	10	10	10	10							Numer of showss and exhibitions held	Qtrly	Ministry of Tourism and Art
		Undertake Artists Visitors, visitations and Inspection Tours	Across the district	0	15	3	3	3	3	3							Number of visits done	Qtrly	Ministry of Tourism and Art
		Identify Expressive Arts Teachers and Art Experts in formal employment	Across the district	0	30	5	5	5	5	10							Number employedf	Qtrly	Ministry of Tourism and Art
		Identify Artists enterprises as fully surviving on art	Across the district	0	200	25	25	50	50	50							Artists Number of enterprises fully surviving on art identified	Qtrly	Ministry of Tourism and Art
		Establish Creative Industries enterprises value chains and market linkages	Across the district	0	10	2	2	2	2	2							Number of Creative Industries enterprises value chains and market linkages	Qtrly	Ministry of Tourism and Art

Identification and registration of Creative Industries enterprises and Artists	Talent and Entrepreneurship Skills Development and mentorship programs	Identify Film and Drama practitioners identified and hold Talent shows	Across the district	0	150	25	25	25	25	50							Number of Film and Drama practitioners identified and hold Talent shows	Qtrly	Ministry of Tourism and Art
		Identify Music and Dance practitioners and hold Talent shows	Across the district	0	50	10	10	10	10	10							Number of Music and Dance practitioners and hold Talent shows	Anually	Ministry of Tourism and Art
		Identify Poetry and Comedy practitioners and shows	Across the district	0	20	4	4	4	4	4							Number of Poetry and Comedy practitioners and shows	Anually	Ministry of Tourism and Art
		Undertake field visits to Art galleries, Play and theatre houses, exhibitions centers and studios for enhancement of quality products	Across the district	0	15	3	3	3	3	3							Number of field visits taken	Qtrly	Ministry of Tourism and Art
	Industries Infrastructure development	Establish/rehabilitate /develop Arts Business centers spaces	Across the district	0	2		1	1									Number of arts business center spaces	Qtrly	Ministry of Tourism and Art
Rehabilitation and construction of Livestock infrastructure	Infrastructure development	Objective 10: To Improve Livestock production and productivity from by 2027																	
		Rehabilitation of Dip Tanks and Spray Race	Munga West, Munga North, Munya ma,	0	6		1	1	2	2							Number of Dip tanks and spray race rehabilitated		MFL

of Aquaculture development			kafula mase, Mpima																
		Construction of Dip Tanks	Chinya nja Muwo wo East, Muwo wo West, Luansa nse	0	4	1	1	1	1										Num Dip Const in the
		Construct of Livestock Camp houses	Across the district	0	6		1	1	1	1	1	1							Num camp Hous const in Distri
		Rehabilitate a veterinary Clinic	District Office	1	1		1											A con Vet C	
		Rehabilitation of Abattoir	Industri al area	0	1		1											A rehab Abatt Indus area	
		Construction of 5 cold storage facilities	Entire District	0	5	1	1	1	1	1								Num cold const	
		Construct 10 kennels	District office and in all Vet Camps	0	10	3	2	2	2	1								Num Kenn const	
		Construction of breeding & livestock centres	Entire District	0	1		1											Breed and Lives Centr const	
		Objective 11: To improve aquaculture production and productivity from 15.7 to 20 Metric Tonnes by 2027																	

		Promotion of Prep meeting stakeholder 2 Hold meetings with private, expo 2025 ,	Entire District	0		1	2										Number of prep meeting held	Anually	KMC/KCCI
		Hold Kabwe Expo preparatory meetings to help promote PPP and business to business joint ventures.	KMC	0	4	2	2										Number of prep meeting held to promote PP	Qtrly	KMC/KCCI
		Hold Kabwe expo event aimed at promoting PPP	Entire District	0	1			1									Number of Expos held	Qtrly	KMC/KCCI
Promote Enterprise Development	Business Development Services Provision	Hold engagement meetings stakeholders from the private stakeholders aimed at creating a robust value chain system	Entire District	0	20	4	4	4	4	4							Number of engagement t meetings held	Once off	Chamber of Commerce, GRZ
		Hold engagement meetings with the Local Authority aimed at restructuring business licensing fees and normalization of informal businesses.	Entire District	0	20	4	4	4	4	4							Number of engagement t meetings held	Annual ly	KMC/CEEC

		Conduct a verification exercise of informal businesses in the district	Entire District	0	2	1	1	0	0	0							Number of verification exercises conducted	Annual ly	KMC
		Conduct engagement meetings with informal business owners on the need to formalize their business	Entire District	0	20	4	4		4	4							Number of engagement meetings conducted	Annual ly	Chamber of Commerce, GRZ
Skills development	Empowerment	Objective 15: To empower 2,016 youths with skills development under TEVETA by 2027																	
		Training of 2,016 youth by TEVETA approved Schools	All wards	316	2,016	316	350	400	450	500							Number of youths trained by TEVET approved schools	Annual ly	GRZ, KMC
Illegal selling game in own ers/Ides	Objective 13: To reduce illegal trade in wildlife products by 2027																		

		Meetings with game owners ranch	Town Centre, Luangwa Township, Makulu, Mukobeko, Highridge, Katondo, Bwacha, Chimanmani, Chidwin Barracks, Zambia Railways Compound	0	18	3	3	4	4	4								Number of meetings	Annually	DNPW, KMC, GAME RANCH OWNERS
		Community Sensitization/ meetings with the KMC		0	4	2	2											Number of sensitization and trainings	Annually	DNPW, KMC, GAME RANCH OWNERS
of Wildlife Police	Wildlife Police	Objective 14: To improve on law enforcement manpower by 2027																		

		Advertise for recruitment of wildlife police officers on behalf of MOT	Entire District	0	1		1										Number of adverts	Annually	DNPW, MOT
		Collect applications on behalf of MOT	Entire District	0	1		1										No of applications	Annually	DNPW KABWE
		Submit applications to MOT	Entire District		1		1										No of Submissions	Annually	
To procure more vehicles to enhance the operations of DNPW	Procurement of motor vehicles	Monitor procurement progress	Entire District	1	1		1										Number of motor vehicle procured	once off	GRZ
Objective 15: To provide accommodation for Wildlife Police Officers by 2027																			
	Conservation education	Radio programs talk and music shows wildlife magazine distribution	Entire Kabwe District	0	4	1	1	1	1	1							Number of magazines distributed, Number of radio programs hosted	Qtrly	DNPW, MOT
Objective 16: To empower 1,020 youths, women, and disabled (Cooperatives, Clubs, Associations, and Organized Groups) by 2027																			
Offering grants	Empowerment	Offering of 1,020 grants to Organized Groups	All wards	120	1,020	120	150	200	250	300							Number of organized groups, clubs awarded grants	Qtrly	GRZ, KMC

Objective 17: To empower 2,016 youths with skills development under TEVETA by 2027																			
Skills develop ment	Empo werment	Training of 2,016 youth by TEVETA approved Schools	All wards	316	2,016	316	350	400	450	500							Number of youths trained by TEVET approved schools	Annually	GRZ, KMC

Table 61: District Monitoring and Evaluation Framework: -Human and Social Development (8NDP PILLAR 2)

Strategy	Program	Activities	Location	Baseline	Target	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032	Indicator	Freq	Resp. Agency/Dept
Objectives	Enhance Access to Quality, Equitable and Inclusive Education By 2027																	
Improve on staffing levels	Teacher Deployment	Deployment of 1490 teachers in the district.	Across the district	3257	1490	149	149	149	149	149	149	149	149	149	149	No. of teachers deployed in the district	ongoing	MOE
Promote Adult Literacy Program	Adult Education/Adult Literacy Adult Literacy	Opening of Adult literacy Education Centers	Munyama and Chinyanja	14	25	6	6	4	5	4						No. of adult Literacy Education Centers opened	Annually	MOE
Promote Early Childhood Education	Early Childhood centers	Establishment of 16 more Early childhood centers in 16 primary schools	Justine Kabwe, Wawa, Chililali la, Nakoli, Bwacha, Kawama, Bwacha, Chimanmani, Kalonga, Kasitu, Muwowo, East, Luangwa	43	16	2	4	2	4	4						No. of early childhood centers established in primary schools	Annually	MOE

Promote Inclusive Learning and education	Special Education Centres	Establishment of 8 more special education centres	Mine, Grace Christian primary school, Kawama primary school, Munga primary school, Nakoli primary school	17	8	2	1	1	1	3						No. of special education centers established	Annually	MOE
ICT Promotion	IT equipment	Procurement of 300 computers in schools	Across the district		300	60	60	60	60	60						No. of computers procured in schools	quarterly	MOE
Construction of staff houses	Infrastructure Development	To construct 900 staff houses in the district by 2027	Across the district	399	900	100	200	200	200	200						No. of staff houses constructed in the district by 2027	quarterly	MOE
Rehabilitation of all dilapidated infrastructure	Infrastructure Development	Rehabilitation of DEBS office premises	DEBS Office	0	1		√	√	√							No. of offices rehabilitated at District education board office	ongoing	MOE
		Rehabilitation of 100 existing schools at all levels of education in the district	Across the district	0	100	10	20	10	20	10	20	10	20	10		No. of schools rehabilitated in the district	ongoing	

	Infrastru cture develop ment	Construction of 4 boarding secondary schools in the district	1 at Kafulamase 1 at Munga 1 at Kang'omba and 1 at nyenyezi	0	4		1		1		1		1		No. of boarding Secondary schools constructe d	on- goin g	MOE
Constr uction of new school s	Infrastru cture develop ment	Construction of 2 primary schools	Kasavasa - waya	59	2		1	1							No. of primary schools constructe d	on- goin g	MOE
	Infrastru cture develop ment	Construction of Kawama Primary school	Kawama	0	1		1								No. of permanen t school structure constructe d at Kawama	on- goin g	MOE
Constr uction of an indep enden t school struct ure	Infrastru cture develop ment	Construction of an independent day secondary school at Kasanda Malombe primary school	Kasanda Malombe	0	1		1								No. of Secondary schools constructe d at Kasanda Malombe	on- goin g	MOE
Enhan ce access to safe Water and sanitat ion suppl y in school s	Infrastru cture develop ment	Construction of ablution blocks in schools.	All Wards	0	100	5	10	10	15	10	3 5	1 0	5		No. of ablution blocks constructe d	quar terly	MOE
		Drilling of boreholes and establishing Piped Water schemes		67	100	5	10	10	15	10	3 5	1 0	5		No. of boreholes drilled and piped water schemes establishe d	quar terly	MOE

Construction of school Hall	Infrastructure development	Construction of school halls in 2 Secondary schools	Danford Chirwa and Raphael Kombe	0	2		2									No. of school halls constructed	quarterly	MOE
Construction of classroom blocks	Infrastructure development	Construction of 6X3 classroom blocks in 3 primary schools	Nakoli, bwafwano, Nkruma Ext		6		2	2	2							No. of classroom blocks constructed	quarterly	MOE
Procurement of desks	School Furniture	Procure desks in all schools	All schools in the district	15989	30962	2,800	3,500	2,900	3,000	3,281	2,800	3,500	2,900	3,000	3,281	No. of desks procured	quarterly	MOE
Construction of lab facilities in schools	Infrastructure development	Construction of 3 laboratories in the 22 respective Schools in the district.	All District	6	66	2	8	8	10	10	8	10	10			No. of laboratories constructed in schools.	quarterly	MOE
Objectives	Improve sanitation coverage from 70% to 90% by 2027, Increase solid waste collection and disposal from 40% to 70% by 2027 Recycle 25% of all solid waste collected by 2027 Improve sanitation coverage from 70% to 90% by 2027, Increase solid waste collection and disposal from 40% to 70% by 2027																	
Maintenance and rehabilitation of sanitation infrastructure	Infrastructure development	Maintenance/ rehabilitation of sanitation facilities at the following markets:	Pollen (1), Njanji (1), Kachulu (1), Kamushanga (1), Mukobeko (1), Kasanda (1), Mine (1), Green Market (1)		8	2	2	2	1	1						No. of sanitation facilities maintained and rehabilitated at the markets	quarterly	Local Authority, GRZ

Maintenance of sanitation infrastructure	Infrastructure development	Maintenance of sanitation facility at Kabwe Intra bus station	CBD	0	1		1									No. of sanitation facilities maintained and rehabilitated at intra bus station	quarterly	Local Authority
Community Sanitation and Hygiene promotion	Sanitation and hygiene promotion	Intensify sensitization and demonstrations in sanitation and hygiene promotion	All the 29 Wards	12	60	12	12	12	12	12	12	12	12	12	12	No. of sensitizations and demonstrations in sanitation and hygiene promotion conducted	quarterly	KMC, GRZ
Emptying of On-Site Sanitation Facilities	Fecal Sludge Management	Sensitization and Orientation Training of Emptiers	All the 29 Wards	0	145	29	29	29	29	29						No. of sensitization and orientation trainings of emptiers conducted	quarterly	KMC, GRZ
		Procurement of EVAC, Tools; PPE's and Chemicals	All the 29 Wards	0	29	9	10	10								No. of EVAC, Tools, PPEs and Chemicals procured	quarterly	KMC, GRZ
		Procurement of Vacuum tanker	All the 29 Wards	1	1		1									No. of Vacuum tankers procured	quarterly	KMC, GRZ

Enhancement of solid waste management coverage	Solid Waste Management	Procure skip bins	CBD	6	10	2	2	2	2	2						No. of skip bins procured	quarterly	KMC, GRZ
		Procure a Compactor truck		0	1		1									No. of compact or trucks procured	quarterly	KMC, GRZ
		Procure 2 tipper trucks		0	2	1			1							No. of tipper trucks procured	quarterly	KMC, GRZ
		Procure a Tractor Load Backhoe		0	1	1										No. of tractors load backhoe procured	quarterly	KMC, GRZ
		Procure a Front End Loader		0	1	1										No. of front end loader	quarterly	KMC, GRZ
		Procure a Bulldozer		0	1		1									No. of Bulldozers procured	quarterly	

Enhancement of solid waste management coverage	Infrastructure Development	Construction, operation and maintenance of an engineered landfill through Public Private Partnership (Build, Finance, Operate, Transfer Model)	Mpima	0	1		1									No. of engineered landfills constructed and maintained through Public Private Partnership (Build, Finance, Operate, Transfer model)	quarterly	Local Authority, PPP
Enhancement of solid waste management coverage	Solid Waste Collection	Engagement meetings with franchise companies and Community Based Enterprises in the six solid waste management zones	Six zones	0	6	6										No. of franchise companies and community based enterprises in the six solid waste management zones engaged	quarterly	Local Authority, PPP

	Recycling of solid waste	Engage recycling companies and 2 material resource recovery companies with facilities	Local/ International	0	4	2	2									No. of recycling material resource recovery companies with facilities engaged	quarterly	Local Authority
Enhancement of solid waste management coverage	Community awareness on solid waste management practices	Engage media houses and other stakeholders through radio shows in awareness creation	All wards	8	38	12	12	6	4	4						No. of media houses and other stakeholders engaged through radio shows in awareness creation	quarterly	Local Authority
		Conducting District anti-litter awareness campaign.	All wards	29	40	8	8	8	8	8						No. of district anti-litter awareness campaign conducted	quarterly	
		Incentivizing the Keep Kabwe Clean & Green & Healthy Campaign (KKCGHC)	All wards	12	60	12	12	12	12	12						No. of Keep Kabwe clean, green and Healthy Campaigns incentivized	quarterly	

		Conducting meetings on Solid Waste Management (Ward Development Committees, Markets, Schools, Business Associations, etc.)	All wards	29	100	20	20	20	20	20						No. of meetings on Solid waste Management (Ward Development Committees market, Schools, Business Associations) conducted	quarterly	
Enhancement of solid waste management coverage	Community awareness on solid waste management practices	Engage street vendors on the best solid waste management practices	Freedom and Independence Way (CBD)	12	60	2023-Street vendors to move into designated markets	2024-Engaging traders in the KKC GHC	2025-Engaging traders in the KKC GHC	2026-Engaging traders in the KKC GHC	2027-Engaging traders in the KKC GHC						No. of street vendors on the best solid waste management practices engaged.	quarterly	Local Authority
Objectives	To attain at least 80% of clean and safe urban water supply within 5 years																	
The LA in collaboration with LWSC Improve access to clean and safe water supply	Infrastructure development and maintenance	Prepare maps for the peri urban areas to depict households without water points	Katondo, Waya, Makululu, Makandanyama, Kafulamase, LA	3	7	7										Number of maps prepared	quarterly	LA
		Drill, test and equip new boreholes	All wards	0	50		10	10	10	10	10					Number of boreholes	quarterly	

																drilled (water schemes)		
		Rehabilitation of 52 boreholes	All wards	0	52	10	5	15	12	10						Number of boreholes rehabilitat ed	quar terly	LgWSC
The LA in collaboration with LWSC Improve access to clean and safe water supply	Infrastructure development and maintenance	Installation of water kiosks (Munyama, Munga, Chinyanja, Muwowo East, Muwowo West, Justin Kabwe, Nakoli, Waya, Kalonga (Kamushanga, Kakumbi and Makwati, Luansanse Kulamase, Chirwa, Njanji , Mpima)	16 wards	0	16		4	4	4	4						Number of water kiosks installed	quar terly	Water Affairs
Objec tives	To provide quality adequate transport facilities (i.e. ambulances and utility vehicles) for smooth health service delivery																	
Increase access to quality health care	Equipment and transport procurement and maintenance	Procure 4 basic standard ambulances	Kabwe district hub/zones	0	4	1	1	1	1	-						Number of ambulanc es procured	Quar terly	MOH/COOR PERATING PARTNERS/ CDF
		Procurement of 35 motorbikes	Kabwe district health office/healt h facilities	10	35	5	10	10	10	-						Number of motor bikes procured	Quar terly	MOH/COOR PERATING PARTNERS/ CDF
Increase access to quality health care	Equipment and transport procurement and maintenance	Procurement of 2 Toyota Land Cruiser utility vehicles and 1 containerized truck	Kabwe District Health Office	1	3	1	1	1	-	-						Number of utility vehicles procured	Quar terly	MOH/COOR PERATING PARTNERS/ CDF

Object ives:	To reduce the maternal mortality ratio from 258 to 150 per 100 000 live births by end of 2024																		
Increase access to quality health care	Infrastructure development	Construction of 24 maternity wings	Chowa Forest Health Post, Bruneli Health Post, Chankalamu Health Post, Chililalila Health Post, Chitakata A Health Post, Chitakata B Health Post, Hamududu Health Post, Kafulamase Health Post, Kalima Health Post, Kalwelwe Health Post, Kamakuti Health Post, Kang'omba Health Post, Makupu A Health Post, Makupu B Health Post, Mpima Dairy Rural Health Post	18	24	13	11	-	-	-							Number of maternity wings constructed	Quarterly	MOH/CDF
		Extension of 4 Maternity wings	Pollen, Bwacha, Kasanda, Natuseko	0	4	2	2	-	-	-	2	2	-	-	-		Number of maternity wings extended	Quarterly	MOH/CDF

Increase access to quality health care	Infrastructure development	Upgrading of Ngungu and Mahatma Gandhi to mini hospitals (construct a theatre, admission wards and physio block)	Mahatma Gandhi, Ngungu	0	2		1		1				1		1		Number of health centres upgraded to mini hospitals	Quarterly
		Upgrade 5 Health facilities (construction OPD block, Lab)	Kasavasa, Pollen, mukobeko T/S, Natuseko, Katondo	0	5	1	1	1	1	1							Number of health facilities upgraded with OPD block and Laboratory	Quarterly
		Construction of 5 health facilities	Kamushanga (Kakumbi), 4 Miles (Shakumbila), Muwowo, Kizito, Five Arces (Kalonga farms)	42	5	1	1	1	1	1							Number of health facilities constructed	Quarterly
		Construction of 2 Mortuaries	Makululu Mini and Katondo Mini Hospitals	0	2		1		1								Number of mortuaries constructed	Quarterly
		Construction of 1 District Hospital	Natuseko	0	1			1									Number of district hospitals constructed	Quarterly

Increase access to quality health care	Infrastructure development	Expansion of 3 Laboratories	Katondo and Makululu Mini Hospitals, Bwacha	0	3	1		1	1							Number of health facilities expanded with Laboratories	Quarterly	MOH/CDF/COOPERATING PARTNERS
		Expansion of 2 Pharmacies	Chowa , Katondo	0	2		1		1							Number of Pharmacies expanded	Quarterly	MOH/CDF
increase access to quality health care	Equipment procurement and maintenance	Conduct inventory of available equipment	All Health facilities	4	20	4	4	4	4	4						Number of inventories conducted	Monthly	Ministry of Health
		Procure BP Machines	All Health facilities	42	84	42		42								Number of BP machines procured	Monthly	Ministry of Health
		Procure Autoclaves	All Health facilities	21	84	42			42							Number of Autoclaves procured	Monthly	Ministry of Health
		Procure Laundry Machines	All Health facilities	0	42		42									Number of laundry machines procured	Monthly	Ministry of Health
		Procure Genxpert	Bwacha and Kabwe Central Constituency	7	6	1	2	1	1	1						Number of Genxpert procured	Monthly	Ministry of Health
		Procure x-ray machines	Mahatma Gandhi, Ngungu, Katondo and Makululu Mini Hospitals	0	4	1	2	1								Number of X-ray machines procured	Monthly	Ministry of Health

increase access to quality health care	Maternal healthcare	Procure CD4 Machines	All Health facilities	2	40	8	8	8	8	8						Number of CD4 Machines procured	Monthly	Ministry of Health
		Conduct community meetings on early ANC bookings and the importance of institutional deliveries	All wards	15	60	12	12	12	12	12						Number of community meetings held	Monthly	Nursing Officer MCH
		Advocate for male partners to attend antenatal clinics	All wards	15	60	12	12	12	12	12						Number of male partners attended to	Monthly	
		Follow up of maternal and neonatal deaths in the community	All wards	15	60	12	12	12	12	12						Number of follow ups made	Monthly	
		Hold maternal and neonatal Review meetings	All wards	15	60	2	2	2	2	2						Number of meetings held	Monthly	

Objectives:		Objectives: To Increase number of health facilities with functional waste management infrastructure from 10 to 19 by the end of 2024																
Strengthen public health	Infrastructure development	Construction of 19 Incinerators	1 Onent Health Centre, Bruneli Health Post, Chililalila Health Post, Kafulamase Health Post, Kalwelwe Health Centre, Kang'omba Health Post, Kasavasa Rural Health Centre, Mukobeko Township Urban Health Centre, Waya Health Post, Magandanyama Health Post, Mahatma Gandhi Health Centre, Katondo Health	0	19	10	9	-	-	-							Number of incinerators constructed	Weekly CDF

Strengthen public health	Infrastructure development	Construction of 19 Placenta Pits	P Onen Health Centre, Bruneli Health Post, Chililalila Health Post, Kafulamase Health Post, Kalwelwe, health Centre, Kang'omba Health Post, Kasavasa Rural Health Centre, Mukobeko Township Urban Health Centre, Waya Health Post, Magandanya ma Health Post, Mahatma Gandhi Health Centre, Katondo Health	8	19	10	9	-	-	-	10	9	-	-	-	Number of Placenta Pits constructed	Weekly	MOH/C DF

	Fast Track Court	Establishment of a Fast Track Court	CBD	0	1	1										No established	Month ly	Council /Home Affairs

PART SIX

CONCLUSION

6.0 Conclusion

The Integrated Development Plans (IDPs) are a requirement for every district in the country to put in place. The mandate is provided for by the provisions of the Urban and Regional Planning Act No. 3 of 2015 of the Laws of Zambia. Kabwe Municipal Council has a fundamental responsibility to establish an effective and efficient system of local government in the district and ensure the financial sustainability of the proposals in the IDP as well as creating a conducive environment that will facilitate inclusive economic growth and development.

The IDP through the goals that have been identified has set in motion the sustainable job creation, broadened local tax base and improved revenue premised on the successful implementation of catalytic projects identified and the partnerships. The Council has made a critical consideration of this inclusive economic growth that will reposition Kabwe as an investment destination of choice, enhance our industrial potential, diversifying the local economy and strengthening social services delivery while improving the status of the most vulnerable in our communities.

The IDP for Kabwe will be responsive to addressing structural imbalances in the region due to economic decline, lack of opportunities to enable meaningful social transformation and environmental protection, and the lack of a strategic planning and development framework, which resulted in considerable implementation of projects in the IDP area. The IDP was also prepared to improve the efficiency of Local Authorities and other devolved service delivery institutions.

The preparation process the Kabwe IDP hinged on the establishment of the IDP Committee that prepared and advertised a Planning Programme, which set in motion the

preparatory work for the IDP. Throughout the process, references were made as provided for by Ministry of Local Government IDP Guidelines, relevant GRZ legislation, national plans, policies and programmes as well as to international conventions and protocols for sustainable development. The overall approach and methodology for preparation of Kabwe IDP was highly participatory. This involved broad-based consultations with key stakeholders such as the communities, the Chief, civic and traditional leaders, the business community, Government Ministries, Departments and

Agencies, CSOs, Special Interest Groups and private sector organisations. Kabwe Municipal Council will be a beacon of hope in leading the way towards strengthening how the local government works with its communities.

The core development issues identified in the IDP consultative process are mainly related to infrastructure, amenities and social services, economic development, and the environment. Of important note are impassible feeder roads especially during the rainy season as people attempt to access markets and trading places, dilapidated livestock (and irrigation) infrastructure, limited access to primary health care, long distances to schools and high prevalence of teenage pregnancies. Other core issues related to access to water supply, urban planning, burial sites, effects of climate change on crops, encroachment of forests, deforestation and soil erosion, and water pollution. Access to finance and land, Council revenue base, business processes and permits, and business practices of multinational corporations were among the core issues affecting the economic development in the IDP area.

Based on the issues identified, a development vision for the IDP area was formulated as well as the Development Policies, objectives and strategies defined and validated, and an IDP developed. Priority areas of interventions were then identified as increasing agricultural productivity, and; promoting multi-modal mobility and developing public transport infrastructure, strengthening the regional economy through economic diversification and value addition and ensuring sustainable access to natural resources through environmental protection and conservation. Kabwe Spatial Development Framework sets out the spatial vision and development priorities to achieve a reconfigured, inclusive spatial form for the district.

The document is a spatial interpretation of the Integrated Development Plan and flows for the five-year planning period. Alternative spatial scenarios were outlined and justification of the chosen scenario was provided as well as land use planning policies and proposals. Significant time and resources were invested in assessing the revenue generation potential of the Council.
